

Standardization Committee AFNOR Electronic Invoicing XP Z12-014

Annex A Description of the main specific use cases

Version 1.4 of June 30th, 2026

Author: FNFE-MPE, based on the initial work of the DPFE of the DGFIP and the AIFE and in accordance with the work of the AFNOR Electronic Invoicing Standardization Commission, all of its members, and the working meetings of the sub-groups.

VERSION MANAGEMENT

Version No.	Version Date	Description of changes
V1.0	June 13, 2025	Initial version
V1.1	July 31, 2025	Following comments and corrections, editorial changes, and additions and/or modifications below: Chapter 1.4: More detailed explanation of electronic invoicing addresses and their uses. Chapter 1.5: Application of Standard Z12-014, Addition

Version No.	Version Date	Description of changes
		Chapter 2.1: More detailed explanation of controls. Addition of the fact that the "Submitted" status no longer has to be transmitted to the PA-R (but still to the PPF). Chapter 2.4: clarification on cases of REFUSAL (second point). Chapter 3.2.1: More detailed explanation of the management of Third Parties around the SELLER's and BUYER's Pivotal Platforms Chapter 3.2.2 (Case No. 1): clarifications at the end of the chapter Chapter 3.2.4: second NOTE added (the Third-Party PAYER can also connect to the SELLER's Accredited Platforms («Plateformes Agréées»)). Chapter 3.2.5: Notes added after diagram (Figure 12). Chapter 3.2.9 (use cases 8 to 10): addition of a chapter 3.2.9.1 focused on cash pooling, with the rest of the chapter focused on factoring. Chapter 3.2.9.3 (case no. 8): Addition of a NOTE and editorial clarifications on the additional identifier of the factoring company. Correction of the Subject code to ACC (and not AAC). Section 3.2.9.5 (case no. 10): Addition of codes for dedicated factoring statuses. Chapter 3.2.10 (case no. 11): confirmation of the refocusing on the use of an electronic invoicing address for the BUYER entrusted to a PA-TR to which the third-party manager has access in order to manage invoices on behalf of the BUYER. Chapter 3.2.12 (Cases 13 and 14): Addition of a chapter title 3.2.12.1 for the introduction. Section 3.2.12.2: addition of an example with a subcontractor invoice subject to reverse charge VAT and a Contractor invoice with VAT. Chapter 3.2.12.3: Some editorial corrections in the table describing the steps (SELLER replaced by SUBCONTRACTOR). Chapter 3.2.12.5: editorial corrections in the paragraphs under Figure 21 (CO-CONTRACTOR and not SUBCONTRACTOR), THE AGENT is positioned as the SELLER'S AGENT (and not the BUYER'S AGENT, in particular to allow an EMO to play its role as the BUYER'S AGENT). Chapter 3.2.13 (case no. 15): Addition of a paragraph specifying that the electronic invoicing address is entrusted to a PA-TR chosen by the BUYER with its Media Agency, and able to allow the Media Agency to process the invoice on behalf of the BUYER. Some editorial corrections. Chapter 3.2.28: case no. 29, Single Taxable Entity: more detailed explanation at the end of the chapter. Chapter 3.2.29 (case no. 30): clarifications in the NOTE.
V1.2	2025 10 31	Vocabulary correction Accredited Platform /PDP, Compatible Solution Chapter 1.3: addition of factored invoices and multi-vendor invoices to the list Chapter 1.4: addition of paragraphs 1.4.3 and 1.4.4 Chapter 2, insertion of 2.3 on invoices not transmitted due to absence of PA-R Chapter 3.2.18, 19a, and 19b: invoicing mandate and self-billing, taking into account the seller's VAT regime

Version No.	Version Date	Description of changes
		Chapter 3.2.31 case no. 32: addition of a paragraph following the ruling of June 5, 2025 (BOI-RES-RVA- 000209-20250605) Chapter 3.2.32, case 33: example 2: estimated profit margin (with average margin rate) Addition of Case No. 37: Joint ventures Addition of case no. 38: Invoice with sub-lines Addition of case no. 39: Transparent intermediary combining the sales of several sellers - Multi-Vendor Invoice Addition of case no. 40: Grouped payments, netting, or compensation in the event of cross-purchases/sales Addition of case no. 41: Barter companies (inter-company bartering) Addition of case no. 42: Tax exemption management
V1.3	2026 02 26	Addition of the definition of flow 11, supplement to that of flow 10. Chapter 1.4.2: some corrections. Addition of Chapter 1.4.5 on the choice of electronic addresses and the consequences in the event of a change of PA. Additions to Chapter 3.1 on third-party management. Additions to case no. 2 (chapter 3.2.3). Some corrections to case no. 13 and addition of examples of "Payment Sent" status and "Payment Received" status (chapter 3.2.12.3). Some clarifications on case no. 37 Joint Ventures (chapter 3.2.26) Additions to case no. 38 (invoices with sub-lines), chapter 3.2.27. Additional information on case no. 41 (Barter Companies), chapter 3.2.40. Addition of chapter 3.2.42, case no. 43: e-reporting for B2Binternational. Addition of case 43a (chapter 3.2.42.6.1): triangular transactions. Addition of case 43b (chapter 3.2.42.6.2): Stock transfers treated as intra-Community deliveries. Addition of case no. 44 (chapter 3.2.43): Transactions with entities established in the DROM / COM / TAAF.
V1.4	2026 06 30	Chapter 2.5: Additional details on managing the "Rejected" status, particularly when it occurs after the VAT return for the underlying invoice has been filed. Addition of reasons applicable only to B2G invoices. Chapter 3.2.6 (Case No. 5): Additional information on how to include employee-related data in the invoice to facilitate reconciliation for expense reimbursement. Chapter 3.2.13 (Case No. 15): Modifications to make the content more generic, given that application to the media sector is detailed in the sector-specific section added to Chapter 3.3.1. Chapter 3.2.32 (Case No. 33): Corrections to VATEX codes for profit margin scenarios. Addition of procedures for indicating VAT on the profit margin for

Version No.	Version Date	Description of changes
		invoices subject to Article 266, Paragraph 1 (travel agencies and tour operators) and Article 268 (building land). Chapter 3.2.39 (Case No. 40): Cross-sales and invoice offsetting. Addition of the option to use a bidirectional self-billing arrangement. Chapter 3.2.43 (Case No. 44): Addition of procedures for accounting for <i>octroi de mer</i> (dock dues) taxes in certain import invoices or goods deliveries involving French Overseas Departments. Addition of a new Chapter 3.3 (Sector-specific applications), featuring three initial sections dedicated to specific sectors: • Chapter 3.3.1: Media Sector – Advertising Space Buying • Chapter 3.3.2: Energy Sector – Common practices for entering energy sector business data • Chapter 3.3.3: Real Estate Sector

Table of contents

1	General overview	9
1.1	Presentation of the invoicing process and the parties involved	9
1.2	Presentation of the annexes used in the use cases	12
1.3	Presentation of invoices taken into account in use cases	13
1.4	Presentation of electronic invoicing addresses and their link to the Directory	13
1.4.1	What is an electronic address for the exchange of invoices and life cycle statuses?	13
1.4.2	The PPF Directory («Annuaire») and the use of electronic addresses	13
1.4.3	What happens to a taxable entity not listed in the PPF Directory ("Annuaire")?	15
1.4.4	How to send an invoice to a taxable entity listed in the PPF "Annuaire" but without any choice of an Accredited Platform	15
1.4.5	How to choose these email addresses and what are the consequences if you change your Approved Platform	15
1.4.5.1	Electronic addresses for receiving invoices	15
1.4.5.2	Electronic addresses for receiving the life cycle statuses of issued invoices	16
1.4.5.3	Case of self-billing	17
1.5	Application of Standard XP Z12-014	17
2	Description of the nominal invoice exchange use case	18

2.2	Rejection upon issuance	22
2.3	Compliant invoice but not transmitted due to the recipient not choosing an Accredited Platform	23
2.4	Rejection upon receipt	25
2.5	Refusal of an invoice by the BUYER (the recipient)	26
2.6	Management of a "Dispute" followed by a CREDIT NOTE	29
2.7	Management of a "Dispute" followed by a Corrected Invoice	32
3	Description of the main use cases	34
3.1	Summary table of use cases	34
3.2	Handling of the main cases	36
3.2.1	General	36
3.2.1.1	Third-party management	36
3.2.1.2	Access by third parties to invoices and their lifecycles	38
3.2.1.3	Additional life cycle statuses	39
3.2.2	Case No. 1: Multi-order/Multi-delivery	40
3.2.3	Case 2: Invoice already paid by the BUYER or a third-party PAYER at the time the invoice is issued	40
3.2.4	Case 3: Invoice payable by a third-party PAYER known at the time of invoicing	42
3.2.5	Case 4: Invoice payable by the buyer and partially covered by a third party known at the time of invoicing (subsidy, insurance, etc.)	44
3.2.6	Case No. 5: Expenses paid by employees with invoices in the company's name	47
3.2.7	Case No. 6: Expenses paid by employees without an invoice addressed to the company (simple receipt or invoice made out to the employee's name and address)	48
3.2.8	Case No. 7: Invoice following a purchase paid for with a corporate card (purchasing card)	49
3.2.9	Cases 8 to 10: Invoices payable to a third party (including factoring, cash pooling)	51
3.2.9.1	Cash pooling	51
3.2.9.2	Focus on factoring management	52
3.2.9.3	Case No. 8: Invoice payable to a third party determined at the time of invoicing (factoring, cash pooling)	53
3.2.9.4	Case No. 9: Invoice payable to a third party known at the time of invoicing, who also manages the order/receipt, or even invoicing (Distributor / Depository)	57
3.2.9.5	Case No. 10: Invoice payable to a third-party payee unknown at the time the invoice was created, in particular a factoring company (case of subrogation)	57
3.2.10	Case No. 11: Invoice to be received and processed by a third party on behalf of the BUYER	61

3.2.11	Case No. 12: Transparent intermediary managing invoices for its principal BUYER	65
3.2.12	Cases 13 and 14: Subcontracting and co-contracting (B2B, particularly for private works contracts).....	68

Preliminary note

As part of the reform, the term "Partner Dematerialization Platform (PDP)" has been replaced by "Accredited Platform ("Plateforme Agréée") (PA)" and the term "Dematerialization Operator (OD)" has been replaced by "Compatible Solution (SC)".

1 General overview

1.1 Presentation of the invoicing process and the parties involved

Following the decision to refocus the functions of the PPF (Public Invoicing Portal) on managing the Directory and the Data Concentrator, B2B invoice exchanges between taxable entities are now carried out exclusively through Accredited Platforms («Plateformes Agréées»). This corresponds to Circuit C as described in the document on use cases for external specifications, version 2.4.

As a reminder, B2G exchanges are carried out via the CHORUSPRO Platform, which will remain the platform for public entities subject to invoice receipt obligations in the public sector. However, private sector invoice issuers will also be able to use their Accredited Platforms («Plateformes Agréées») to issue invoices to the public sector. In addition, certain complex use cases involve exchanges between private actors associated with a public actor (co-contracting, subcontracting). This document will therefore also describe these use cases.

This document is intended to provide guidance on various use cases that correspond to business practices, generally on a sector-by sector basis. The objective is to propose best practices for implementation, whether in terms of how to implement invoicing data in the minimum base formats, which are the subject of a separate publication, how to use life cycle statuses in the dynamics of exchanges and processing, but also to define a minimum functional base that Accredited Platforms («Plateformes Agréées») are required to implement.

This document therefore distinguishes between the obligations of Accredited Platforms («Plateformes Agréées») and the optional best practice features for ecosystem players, namely Accredited Platforms («Plateformes Agréées»), management solution publishers involved in invoice management, taxable entities, third parties, and more generally everything included in the term OD (Dematerialization Operator)/SC (Compatible Solution).

This document is based on the use of the minimum base formats and profiles as described in standard XP Z12-012, in addition to the external specifications that describe the specifications of the interfaces between the PPF (Directory and Data Concentrator) and the Accredited Platforms («Plateformes Agréées»), including the description of flows 1, 10, as well as the use of flow 6 of the Life Cycle applied only to exchanges between Accredited Platforms («Plateformes Agréées») and the PPF.

As a reminder, standard XP Z12-012 describes the use of semantic standard EN16931 in the context of the reform through two main profiles (EN16931 and EXTENDED-CTC-FR) and a temporary profile implemented in the Factur-x hybrid format (BASIC WL). Additional management rules have been defined to comply with the requirements of the reform, as well as rules for extracting and transforming structured invoice data to constitute the data required by the tax authorities (flow 1 and flow 10.1). These profiles are then implemented in three formats, namely:

- UBL 2.1.
- UN/CEFACT CII D22B.
- Factur-X, which is an hybrid format consisting of a PDF/A-3 representation (ISO 19005-3), to which a file containing the essential invoice data in UN/CEFACT CII D22B format is attached.

Finally, the standard also describes how the CDAR (Cross Domain Acknowledgment and Response) life cycle status message should be used by end users (entities subject to VAT in France) and their Accredited Platforms («Plateformes Agréées»), as well as between Accredited Platforms («Plateformes Agréées») themselves.

The use cases covered in this document describe how invoice data fits into the XP Z12-012 standard data model, whose life cycle statuses are exchanged, whether in the invoice transmission or processing phase, as well as the dynamics of exchanges between the various parties involved (SELLER, BUYERS, their Accredited Platforms («Plateformes Agréées») and information systems, including OD/SC (Compatible Solution), as well as various third parties and their Accredited Platforms («Plateformes Agréées») /OD/SC (Compatible Solution)).

These use cases can be divided into three main categories, bearing in mind that some fall into several categories:

- Use cases requiring instructions for implementing invoice data, where applicable requiring additional data, and/or a relaxation of certain management rules, i.e., the use of the EXTENDED-CTC-FR profile.
- Use cases involving third parties, which means addressing the issues of invoice sharing and life cycle with these third parties.
- Use cases impacting the life cycle, generally due to the involvement of third parties, but also primarily the management of rejections, refusals, disputes, etc., and anything that requires multiple invoices, corrected invoices, or credit notes to process the invoicing of the underlying transaction.

In these different use cases, several parties are likely to be involved (in capital letters in the text):

- The SELLER is the party that provides the goods or services covered by an invoice. The seller records the invoice in their accounts (as revenue or advance payments). When the invoice includes VAT, the SELLER is responsible for collecting it and therefore declaring it as VAT collected (unless they use a TAX REPRESENTATIVE of the SELLER). The SELLER is also often referred to as the Supplier.
- The BUYER is the person who purchased the product or service. They are therefore always the ones who record the invoice in their accounts as the buyer (as an expense, inventory, fixed asset, or advance payment). When the invoice includes VAT, it is the BUYER who can deduct it, and it is therefore the BUYER who declares the deductible VAT. In most cases, it is the BUYER who pays the invoice. The BUYER may also be referred to as the Customer.
- THE SELLER'S TAX REPRESENTATIVE, who represents the SELLER vis-à-vis the tax authorities if the SELLER does not represent themselves, primarily in relation to VAT returns.
- THE PAYEE, who is the recipient of the invoice payment when it is not the SELLER. An invoice may have several PAYEES (only in the EXTENDED-CTC-FR profile). For example, a factoring company is a PAYEE.
- Other Parties have been deemed useful for addressing certain use cases. They are not present in the EN16931 semantic model for essential invoice data, but have been added to the EXTENDED-CTC-FR profile, which is part of the Minimum Base that taxable entities and Accredited Platforms («Plateformes Agréées») MUST be able to process:
 - ✓ The INVOICER is a third party who creates and issues the invoice on behalf of the SELLER. They must do so under the SELLER's invoicing mandate, in accordance with the regulations in force (see BOI-TVA-DECLA-30-20-10, articles 340 to 500).

- ✓ The SELLER'S AGENT, who acts on behalf of the SELLER, for example when they are in charge of sales and sometimes invoicing (in which case they are also the INVOICER), or even payment receipt.
 - ✓ The ADDRESSEE, more accurately referred to in the standards as the "Billed to," is the Party to whom the invoice is sent because they are responsible for processing it on behalf of the BUYER. However, the use of multiple electronic invoicing addresses for receiving invoices makes it possible to avoid using this ability to send invoices to a third party, but simply to allow that third party to process invoices addressed to the BUYER at an electronic invoicing address (an invoice reception mailbox) whose management is entrusted to that third party by the BUYER. However, when the ADDRESSEE is named on the invoice, this allows the PA-R (receiving party) to manage delegation rights in a more targeted manner to allow it to access the invoice and the processing actions for which it has been delegated. This third party may also enable compliance with the requirements of Article 441-9 of the French Commercial Code, which requires that the postal address of the entity that receives and processes the invoice on behalf of the BUYER be provided (invoicing address if different from the customer's (BUYER's) address, which should be interpreted as the postal invoicing address).
 - ✓ The BUYER'S AGENT, who acts on behalf of the BUYER, often because they were in charge of the ordering phase and can therefore set the processing status (approval, dispute, etc.).
 - ✓ The PAYER, who is the payer of the invoice when it is not the BUYER. For example, when a company within a group is responsible for payments for all of the group's subsidiaries, or in the case of a subcontracting invoice with direct payment from the end customer. There may also be several PAYERS (for example, an invoice that is paid in part by an insurer and in part by the BUYER).
- Accredited Platforms («Plateformes Agréées») are the only ones authorized (and registered for this purpose) to exchange invoices falling within the scope of "e-invoicing" scope (domestic B2B invoices between VAT-registered entities in France or B2G/G2B between a VAT-registered entity and a public body), and to transmit flows 1, flows 10 (e-reporting) and so-called "mandatory" statuses to the PPF Data Concentrator.
 - OD/SC (Compatible Solutions) (Dematerialization Operators) are service providers or management solutions upstream and downstream of invoice exchange and life cycles, and can act as an interface between the various Parties described above and the Accredited Platforms («Plateformes Agréées»).
 - The PPF (Public Invoicing Portal) is responsible for the Directory of Taxable Entities and their electronic invoicing addresses and the Data Concentrator (CdD PPF), i.e., for receiving Flow 1, Flow 10, and Flow 6 for Mandatory statuses (Submitted, Rejected, Refused, Received).

1.2 Presentation of the annexes used in the use cases

The use cases described in this document are based on the documents describing invoice formats and life cycle messages published by AFNOR (XP Z12-012). The semantic format of the invoice is described according to two profiles:

- An EN16931 profile compliant with the EN16931 standard, to which a few additional management rules have been added to take into account the management rules defined in the annexes to the external specifications version 3.1.
- An EXTENDED-CTC-FR profile, which is an extension as permitted by the EN16931 standard, containing additional data referenced using naming conventions such as "EXT-FR-FE-BG-XX" for data blocks and "EXT-FR-FE-XX" for data. In addition, certain management rules in the EN16931 standard have been removed or replaced by more flexible rules for this profile.

Reference may also be made to the annexes of the external specifications in force published on the impots.gouv.fr website:

- **Annex 1 (Excel format):** this annex defines the semantic format of Data Flow 1 required by the tax authorities.
- **Annex 2 (Excel format):** this annex defines the semantic format of the life cycle of flows and business objects (Directory, e-reporting, e-invoicing) and its use in exchanges between Accredited Platforms («Plateformes Agréées») and the PPF.
- **Annex 3 (Excel format):** this annex defines the semantic format of the directory used to create or modify entries in the directory of VAT-registered entities, i.e. the electronic invoicing addresses of invoice recipients.
- **Annex 6 (Excel format):** this annex defines the semantic format for e-reporting of transaction and payment data.

- **Annex 7 (Excel format):** this annex defines all the management rules for all business objects exchanged between the Accredited Platforms («Plateformes Agréées») and the PPF described in the above annexes.

1.3 Presentation of invoices taken into account in use cases

In the context of the dematerialized exchange of domestic B2B invoices, several types of invoices are taken into account (see management rule BR-FR-04 in the description of invoice formats):

- Simple invoices;
- pre-payment invoices;
- Factored invoices;
- Self-billed invoices (when the BUYER creates the invoice on behalf of the SELLER and sends it to them);
- Corrected invoices, which are invoices that cancel and replace a previous invoice. They are therefore both a credit note on the previous referenced invoice and a new invoice;
- Credit notes.
- Multi-vendor invoices, only with the EXTENDED-CTC-FR profile (or EXTENDED from Factur-X), which is an invoice created by a transparent intermediary on behalf of several SELLERS and sent to a single BUYER, with payment centralized to a single payee (usually the transparent intermediary, who can invoice their own services on the same invoice).

1.4 Presentation of electronic invoicing addresses and their link to the Directory

All Parties involved in an invoice have an electronic address, which is to the electronic invoice what the postal address is to the paper invoice, i.e., data that allows an electronic message (an invoice, a life cycle status) to be sent to the party referencing its electronic address.

1.4.1 What is an electronic address for the exchange of invoices and life cycle statuses?

These electronic addresses are composed of an addressing identifier belonging to a given repository, qualified through an identification scheme (SchemeID), to be chosen from a list: the EAS (Electronic Address Scheme) list, available in Standard EN16931 and referenced in Annex A of Standard XP Z12-012. Some electronic addresses are linked to different exchange protocols, such as the "EM" schemeID for an SMTP address (an email: xxx@nomdedomaine.xx), or "AQ" for an X400 electronic address. Most other types can be used in point-to-point exchanges between platforms and, more generally, in interoperable network exchanges such as PEPPOL.

These addresses are therefore often written in the form "schemeID:Address_Identifier," for example:

- 0088:GLN: address using a GLN-type addressing identifier.
- 0060:DUNS: address using a DUNS-type addressing identifier.
- 9957:TVAINTRAFR: address using an addressing identifier corresponding to a French intra-community VAT number.
- 0199:GLEIF: address using a Global Legal Entity Identifier address identifier.
- ...
- And 0225:SIREN or 0225:SIREN_XXX: address using a SIREN (legal identifier in France) or SIREN_XXX addressing identifier, where XXX is either free (and is called SUFFIX) or in SIRET or SIRET_CODE_ROUTAGE form, provided that the SIRET and CODE_ROUTAGE are present in the PPF Directory («Annuaire»).

1.4.2 The PPF Directory («Annuaire») and the use of electronic addresses

The PPF Directory («Annuaire») contains ALL electronic addresses under schemeID 0225 intended to receive invoices for entities SUBJECT to VAT or public entities. Thus, if an electronic address is present in the PPF Directory («Annuaire»), it means that the recipient is subject to VAT or is a public entity. There are therefore entities with a SIREN number (such as associations) that may not be subject to VAT and will not be listed in the PPF Directory («Annuaire»), nor will any of their electronic addresses of the type 0225:SIREN_XXX.

It is therefore also possible that there are electronic addresses under schemeID 0225, i.e., beginning with a SIREN number, that are not in the PPF Directory («Annuaire»). Beyond the above example of a non-VAT-registered association with a SIREN number, a VAT-registered company that wishes to channel the life cycle status of its issued invoices can enter a 0225:SIREN_STATUS in its invoice for itself (BT-34 for the SELLER, for example), without having referenced it in the PPF Directory («Annuaire»). It can then be used in the PEPPOL network so that the life cycle return statuses are sent to it at this address, but it will not be able to receive invoices falling within the scope of e-invoicing.

Thus, in a "traditional" invoice exchange (i.e., not self-billing):

- The BUYER's electronic address in BT-49 is the electronic address to which the invoice must be sent.
- The SELLER's electronic address in BT-34 is the electronic address at which the SELLER wishes to receive its statuses, particularly when it uses interoperability between Approved Platforms ("Plateformes Agréées") in a network for which electronic addresses (also known as "EndPoints") are the keys enabling automated exchanges between platforms (known as "dynamic discovery"). There is no obligation for these life cycle status return addresses to be in the PPF Directory ("Annuaire"), or even under schemeID 0225, as only the invoice receipt addresses for VAT-registered entities in France must be (and it is not necessarily desirable to receive invoices at the same address as these status returns for issued invoices).
- The electronic addresses of the other parties (Payee, Seller's Agent, Buyer's Agent, Payer, etc.) may be used if it is necessary to reply to them with statuses or invoices in order to integrate them into the invoice life cycle. They are not necessarily in the form 0225:SIREN_XXX (particularly for international players not established in France).

Section 1.4.5 details how to choose these addresses and the impact of changing Authorized Platforms, both for sending and receiving.

That said, all VAT-registered entities with a SIREN number are listed in the PPF Directory («Annuaire»). In order to enable the transmission of invoices through the Accredited Platforms («Plateformes Agréées») chosen by each taxable entity, invoice recipients (generally BUYERS, but also SELLERS in the case of self-billing) **MUST define one or more electronic invoicing addresses under SchemeID 0225** and have them registered in the PPF Directory («Annuaire») by the PA-R they have designated to receive their invoices at this electronic invoicing address on their behalf. Those who practice self-billing may choose the same electronic invoicing address for receiving invoices as the one they use to receive their purchase invoices, and it is up to them and their PA-R to then distinguish between the flows. They may also dedicate an electronic invoicing address to self-billed invoices, for example 0225:SIREN_AUTOFACTURE.

These electronic invoicing addresses are the identifier for the address line described in Annex 3 of the external specifications (data DT-7-5-1), and must take one of the following forms:

- **"SIREN"** of the legal entity. This is the most common address used by companies (especially when they only have one).
- **"SIREN_SIRET"**: if the company has chosen to create electronic invoicing addresses for one of its establishments, which must itself be active and listed in the PPF Directory («Annuaire»). This address structure is primarily intended for public sector entities that are referenced by a SIRET number.
- **"SIREN_SIRET_CODEROUTAGE"**: if the company has chosen to create electronic addresses at a more granular level than its establishment. This ROUTING_CODE must be configured in advance in the PPF Directory («Annuaire») and must be active and linked to the SIRET number of the address. This address structure is primarily intended for public sector entities that may need to have "SERVICE EXECUTANT" CODES in order to distribute invoices to the correct departments.
- **"SIREN_SUFFIX"**: if the company wishes to have several electronic invoicing addresses, for example to differentiate between purchasing channels, because it has chosen several Accredited Platforms («Plateformes Agréées») (bearing in mind that an electronic invoicing address can only be associated with a single Accredited Platform on reception side), without having to link these addresses to an internal organization (ROUTING_CODE) or the location of its teams (SIRET). SUFFIXES are freely chosen by the company. They do not need to be created in advance in the PPF Directory («Annuaire»). They are simply part of the electronic invoicing address. **It is therefore this type of address that will be recommended and described in this document for certain use cases.**

Electronic invoicing addresses for receiving invoices are listed in the PPF Directory («Annuaire»), which can be viewed publicly via the Accredited Platforms («Plateformes Agréées») or the PPF Portal, available for public consultation at <https://portail.chorus-pro.gouv.fr>. This means that once you know your customers' SIREN numbers, you can find all their electronic invoicing addresses. You then simply need to enter them on your invoices to ensure they reach your

customers reliably and can be tracked using life cycle statuses. **The electronic invoicing address is therefore essential customer data that needs to be managed within your information system.** Even though it often takes the form of the company's SIREN number, it is important to distinguish between the customer's SIREN number, which is a legal identifier, and the customer's electronic invoicing address, even if it happens to be the same as the SIREN number.

Invoices must therefore contain the recipient's electronic invoicing address (BUYER or SELLER for self-billed invoices), as well as that of the issuer (SELLER or BUYER for self-billed invoices), in order to manage life cycle status returns. Thanks to this electronic invoicing address and the PPF Directory («Annuaire»), Accredited Platforms («Plateformes Agréées») can interoperate automatically, in particular through the PEPPOL network under the governance of the PEPPOL France Authority.

All invoices that fall within the scope of "e-invoicing" MUST contain an electronic invoicing address under schemeID 0225 for the invoice recipient, i.e., for the BUYER (BT-49) for traditional invoices, and for the SELLER (BT-34) for self-billed invoices.

For those who use the PEPPOL network, their electronic invoicing addresses are also available to receive invoices from entities not subject to VAT in France, starting with international entities using PEPPOL for international B2B invoices.

1.4.3 What happens to a taxable entity not listed in the PPF Directory ("Annuaire")?

Some VAT taxable entities do not appear (or do not yet appear) in the PPF Directory ("Annuaire"). In this case, they may be considered "not subject to VAT" by the issuers of invoices addressed to them, which means that these issuers are no longer subject to the obligation to send electronic invoices to recipients and can switch to the B2C e-reporting component of the reform for these transactions (e-reporting of B2C transactions of daily turnover totals by transaction category).

This tolerance also applies to the penalty system: when an entity is not yet included in the recipient directory due to the administration's own validation procedures or technical difficulties attributable to the administration, it will not be penalized if it does not choose an accredited platform.

The suppliers subject to these entities will also not be penalized if they do not issue electronic invoices to entities not yet included in the directory. Suppliers will have to carry out e-reporting as if they were invoicing an entity not subject to tax (flow 10.3 and, where applicable, 10.4 if VAT is due on receipt).

1.4.4 How to send an invoice to a taxable entity listed in the PPF "Annuaire" but without any choice of an Accredited Platform

Some VAT taxable entities appear in the directory but without an active invoicing electronic address, i.e., one connected to an Accredited Platform. In this case, the issuing taxable entity remains subject to the electronic invoicing obligation using the electronic invoicing address listed in the directory (the one corresponding to the SIREN number). Their Accredited Platform can then carry out all the regulatory checks and send a "Submitted" status to the PPF, with the reason "NON_TRANSMISE" (NOT_SENT) in order to alert the tax authorities that the recipient has not chosen an Accredited Platform.

The issuer can then contact their customer to send them a duplicate invoice, for example, and get paid.

The recipient cannot demand a paper or even PDF invoice, as regulations require them to accept electronic invoices and choose an accredited platform. They therefore find themselves in the same situation as if they had not received a paper invoice, which they may have lost. They then rely on a duplicate. If necessary, if they act quickly, the Approved Issuing Platform may be able to resend the transmission so that their invoices reach them.

1.4.5 How to choose these email addresses and what are the consequences if you change your Approved Platform

The choice of electronic addresses depends on the company's situation, its size, whether it faces certain specific use cases that may require gathering related invoices, or its invoice processing organization.

1.4.5.1 Electronic addresses for receiving invoices

Firstly, for electronic addresses used to receive invoices, it is recommended that you choose one or more addresses that are as permanent as possible, as each change requires you to notify all the suppliers concerned, which causes a

certain amount of disruption. As a result, for example, the SIRET network (and therefore also SIRET_CODE_ROUTAGE) does not comply with this principle, since a simple change of address results in a change of SIRET and should therefore be avoided.

It is therefore preferable to choose a limited number of SIREN_SUFFIXE electronic addresses, i.e., electronic addresses corresponding to specific processing requirements. For example, a company that has to manage significant employee expenses may want all resulting invoices to be sent to a dedicated electronic address, because the suppliers are not known in advance and because those invoices are often already paid. Similarly, a company that uses several applications to manage its purchase invoices (e.g., several ERPs, specialized solutions for certain purchases, etc.) may wish to use several invoice receipt electronic addresses as gateways for its various invoicing channels.

A small business that manages few invoices can make do with a single electronic address (and therefore SIREN). A retailer who has several stores and wants to differentiate invoices by store can create dedicated electronic addresses with a SUFFIX to make them more clearly identifiable to suppliers.

It is very bad practice to multiply electronic addresses by recipient within the company or by validator or purchaser department, firstly because this multiplies them, but also because organizations change regularly, as do people, and updating an organizational repository is often complex and time-consuming.

A good illustration of these principles is to consider that electronic addresses for receiving invoices are different entry points into the company, and that internal circulation within departments must be based on the references present in the invoices (order number, contract number, delivery note, buyer references, or even, where applicable, a SIRET number as a reference only, which does not require changing the electronic address for a simple physical move, etc.).

In the event of a change of Accredited Platform (« Plateforme Agréée ») for the electronic address for receiving invoices, all invoices issued after the date of change will arrive on the new Accredited Platform ("Plateforme Agréée"), and all processing life cycle statuses issued by the issuer ("completed " and "Paiement Received") for invoices issued before the change of Accredited Platform ("Plateforme Agréée") will arrive on the new Accredited Platform ("Plateforme Agréée"), which will be responsible for forwarding them to the recipient, who will then be able to respond to them on their old Accredited Platform ("Plateforme Agréée", thanks to the minimum service being maintained for 12 months after the change of AP, as described in the regulations).

1.4.5.2 Electronic addresses for receiving the life cycle statuses of issued invoices

When it comes to issuers' electronic addresses, which are in fact electronic addresses for receiving the life cycle statuses of issued invoices, it is also important not to multiply them unnecessarily, but to organize them according to customer invoicing processes.

It may make sense to use one or more electronic addresses dedicated to receiving the life cycle statuses of issued invoices, which are different from electronic addresses used to receive invoices. However, a small business which processes an average of fewer than 400 invoices per year, including just over a hundred issued invoices, can make do with a single electronic address (e.g., its SIREN number) for issuing invoices (and therefore receiving the life cycle statuses of its issued invoices) and for receiving its electronic invoices.

In the event of a change in the Accredited Platform ("Plateforme Agréée") for issuing electronic invoices, the life cycle statuses transmitted by the recipients (i.e., all those relating to the recipient's processing of invoices) will arrive at the Accredited Platform ("Plateforme Agréée") responsible for the issuer's electronic address (the Seller in the case of non-self-billed invoices) entered in the invoices issued.

There are therefore three possible solutions:

- Keep the same electronic address for receiving the life cycle statuses of invoices issued after the change of Accredited Platform ("Plateforme Agréée") and entrust it to the new Accredited Platform: the statuses of invoices issued with the old PA-E will arrive at the new PA-E, which will be able to transmit them to the issuer of the invoices without reconciling them with the invoices since it will not have issued them. It may also offer a service to redirect these statuses to the old PA-E.
- Change the electronic address for receiving the life cycle statuses of invoices issued for new invoices and entrust it to the new PA-E, while keeping the old address with the old PA-E: The statuses of invoices sent with the old PA-E arrive at the old PA-E, and those corresponding to invoices issued with the new PA-E (and the new electronic address for issuance) arrive at the new PA-E.

- For e-invoicing platforms which use PEPPOL, the electronic addresses for receiving return statuses are entered in an envelope (SBDH) in which the invoice is inserted. This e-invoicing platform may propose to replace the electronic address of the invoice issuer in the SBDH envelope with an electronic address which it controls to ensure that it always receives the statuses of the invoices it processes for issuance, while ensuring that the life cycle statuses are reassigned to each user's invoices.

For a company which processes few invoices and has a single electronic address for sending and receiving, the first approach is the simplest and least disruptive in the event of a change, given the small number of invoices involved.

For a company which decides to dedicate electronic addresses for receiving, the second option is the most effective.

1.4.5.3 Case of self-billing

Self-billing invoices are invoices issued by the BUYER to the SELLER, under an invoicing mandate given by the SELLER to the BUYER. This is often implemented in order to simplify invoice processing from the BUYER's point of view, both for the BUYER, who is often in agreement with himself, and for the SELLER, who does not have to create his invoices, but just to record them.

These invoices are clearly identified by the invoice type code (BT-3). They must then be processed by the Approved Issuing Platforms (PA-E) on the BUYER's side to the Approved Receiving Platforms (PA-R) of the SELLERS.

In terms of electronic invoice receipt addresses, the one in the SELLER block (in BT-34) is therefore used. The SELLER may decide to use the same electronic address as for receiving their purchase invoices, but it is their responsibility to clearly distinguish their purchase invoices from their self-billed sales invoices.

They may also decide to create a dedicated electronic address for receiving invoices (e.g., 0225:SIREN_AUTOFACTURATION), which they entrust to the Accredited Platform ("Plateforme Agréée") of their choice. For a VAT Registered subject to the obligation to receive electronic invoices, this electronic address must be under schemeID 0225 and be listed in the PPF Directory ("Annuaire"). As a reminder (see use case 19b described in Annex A), it is up to the PA-E on the BUYER side to create flow 1 and transmit it to the PPF.

The same applies to the electronic address for receiving the life cycle statuses of issued invoices, i.e., use the same address as for all issued sales invoices, or dedicate an electronic address for the return statuses of issued self-billed invoices (to be entered in invoices in BT-49).

PLEASE NOTE: in this case, all life cycle statuses are reversed between BUYER and SELLER, except for payment statuses. The BUYER remains the one who transmits the "Payment Sent" status and the SELLER remains the one who transmits the "Payment Received" status.

1.5 Application of Standard XP Z12-014

The XP Z12-014 standard and its annexes are intended to describe the use cases identified, how they can be implemented within the framework of the Reform, and the respective obligations of Accredited Platforms («Plateformes Agréées»), OD/SC (Compatible Solutions) and companies for each use case, as well as certain additional optional features that could be implemented to provide added value.

The nominal case and the management of life cycle statuses and settlements with Credit Notes or Corrected Invoices are part of the obligations of all Accredited Platforms («Plateformes Agréées»).

However, unless specifically required by regulation, the implementation of the use cases described in Chapter 3 of Annex A is a matter for the commercial policy of the economic actors (Accredited Platforms («Plateformes Agréées»), OD/SC (-Compatible Solution)), which are therefore under no obligation to be able to handle all use cases. It is also likely that some Accredited Platforms («Plateformes Agréées») will specialize in managing certain of these use cases.

Nevertheless, this list of use cases constitutes a functional reference framework that can help establish comparison grids for the offerings of different Accredited Platforms («Plateformes Agréées»), Compatible Solutions, or other ODs.

2 Description of the nominal invoice exchange use case

2.1 Transmission of an invoice and life cycle

Before describing specific use cases, it is important to start with the nominal case of a SELLER who invoices their customer, the BUYER, through the PA-E of the invoice issuer (in this case, the SELLER) and the PA-R of the BUYER.

This invoice exchange is accompanied by life cycle statuses, first in a transmission phase (statuses created by the Accredited Platforms («Plateformes Agréées») for end users to track end-to-end transmission), then in a processing phase where end users can create statuses to be transmitted to their counterparties through the Accredited Platforms («Plateformes Agréées»).

The **transmission** statuses (**Submitted/Rejected on issue, Issued, Received/Rejected on receipt, Made available**) allow the progress of the invoice to be tracked in this order. **Processing** statuses (**Rejected, Disputed, Suspended, Completed, Approved, Partially Approved, Payment Transmitted, Cashed**) can be set independently. Analysis of use cases may lead to the addition of useful processing statuses for some of them. The first of these is a "Cancelled" status to be assigned to an invoice which has been corrected, either by the SELLER when issuing the Corrected Invoice, or by the BUYER when processing the Corrected Invoice, to indicate that this initial invoice has been replaced and to close its life cycle.

As a reminder, **four** of these statuses are **"mandatory,"** meaning they must be transmitted to the Cdd PPF for the tax authorities, namely **"Submitted" ("Déposée"), "Rejected" ("Rejetée"), "Refused" ("Refusée") and "Payment Received" ("Encaissée")** which is necessary to prepare the VAT pre-fill.

Finally, the **"Payment Received" status must be sent to the tax authorities only if VAT is due upon receipt of payment** (service invoices for which the SELLER has not opted for debits). This also applies to **advance payment invoices, whether for goods or services, for which VAT is payable upon payment of the advance**, even if the taxable entity has opted for debits.

It is also possible for the SELLER to transmit the "Received" status even when VAT is not due upon receipt, but in this case, it is only transmitted to the BUYER (and not to the tax authorities via the Cdd PPF).

Figure1: Illustration of the life cycle and different statuses

Analysis of use cases shows that it will be necessary to provide additional complementary statuses to support processing, such as "Invoiced," "Confidential Invoiced," "Not Invoiced," "Direct Payment Request," etc.

The processing of invoices issued by the PA-E and received by the PA-R involves several steps:

- **Technical checks:** antivirus, empty files, envelope checks, etc. In the event of an error, an UNACCEPTABLE status ("IRRECEVABLE", Code 501) is sent to the issuer, with the reason (see list in Annex A of standard XP Z12-012). The issuer can then correct the invoice and resend it.
- **"Application" checks:** format structure. For XML formats, this corresponds to the xsd check. At this stage, the file is recognized as an invoice. In the event of an error, an UNACCEPTABLE status ("IRRECEVABLE", Code 501) is sent to the issuer, with the reason (see list in Annex A of standard XP Z12-012). The issuer can then correct the error and resend the file. If the checks do not detect any errors, the document is recognized and can be processed.
- **Functional checks:** management rules, corresponding first to the profile (EN16931, EXTENDED-CTC-FR, BASIC WL, etc.), then to the management rules specific to the reform, as described in Standard XP Z12-012. Then checks for duplicates, addresses, and the "reachability" of the electronic invoicing address for receiving invoices. At the end of this last phase, the statuses are as follows:
 - ✓ In the case of processing upon issuance (PA-E), the status is either "Rejected" in the event of an error, with the associated reason, or "Submitted." They are transmitted to the PPF and made available to the issuer (the SELLER and the BUYER for self-billed invoices).
 - ✓ In the case of processing on receipt, the status is either "Rejected" in the event of an error, with the associated reason, or "Received." The "Rejected" status is sent to the PPF and the PA-E and made available to the recipient. The "Received" status is sent to the Issuer (via the PA-E) and made available to the Recipient. The transmission phase ends with the status "Made Available," which means that the Recipient has received the invoice or a notification of receipt of the invoice. This status is transmitted to the Issuer (via the PA-E) and made available to the Recipient.

When invoices are exchanged in batches, i.e., in packages, usually in an envelope that provides some description of the contents, an initial flow control step is necessary, beginning with a technical check, followed by a breakdown by "business object" file (in this case, invoices) and a unit application check. If one of the "business object" files in the batch contains an error (does not comply with the file structure), the most common practice (and that used in exchanges with the PPF, for example) is to declare the entire batch "UNACCEPTABLE" ("IRRECEVABLE") so that the sender can reconstruct it and resend it. The other practice is to identify what is in error (or what has been received correctly) and let the issuer correct and resend what is in error. If the check is positive, the batch can be given an "ACCEPTABLE" status (Code 500). The "ACCEPTABLE" (Code 500) or "UNACCEPTABLE" (Code 501) batch statuses can be transmitted via a life cycle message.

For the sake of completeness, it may happen that the PA-E transmits an invoice to a PA-R that is not responsible for the recipient's electronic invoicing address, either due to an error in consulting the directory on the PA-E side or, in the event of a recent change of PA-R, a problem with updating the directory. In this case, to avoid setting a "Rejected" status, which would require canceling the invoice and creating a new one, the PA-R must issue an "ERROR_ROUTING" status (Code 221) to the PA-E, which can then retry the transmission after updating the directory or consulting/synchronizing it.

The steps in the nominal case are as follows, organized into seven steps, the numbering of which will be retained throughout the description of the various use cases:

Step	Step name	Responsible actor	Description
1	Creation of the invoice for the BUYER	SELLER	Following a commercial transaction (order/delivery, service contract, spot purchase, etc.), the SELLER creates the invoice (flow 2) via its information system. It can entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing.
2	Transmission of flow 1, the invoice (flow 2), and related statuses	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, it MUST transmit the data required by the Administration (flow 1) to the CdD PPF. It MUST also transmit the invoice (flow 2 or flow 3) to the PA-R of the BUYER. It must send the status "Submitted" to the CdD PPF.

Step	Step name	Responsible actor	Description
3	Receipt of the invoice	PA-R	The BUYER's platform (PA-R) receives the invoice (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER for processing.
4a 4b	Processing of the invoice and updating of statuses prior to payment	BUYER	The BUYER processes the invoice and sets the corresponding processing statuses in its PA-R ("Rejected," "Accepted," "In dispute," "Approved," "Partially approved," "Suspended," etc.) for transmission to the SELLER via its PA-E.
4c	Receipt of invoice statuses	SELLER	The SELLER receives the invoice statuses following processing of the invoice by the BUYER in accordance with the terms of the life cycle. If a "Suspended" status is received, the SELLER may send a "Completed" status containing the necessary additional information.
5a 5b	Payment of the invoice Creation and transmission of the "Payment transmitted" status	BUYER / PA-R	The BUYER pays the invoice to the SELLER. They can send a "Payment Sent" status to the SELLER via PA-R (recommended).
5c	Receipt of "Payment Transmitted" status	SELLER / PA-E	The SELLER receives the "Payment Transmitted" status from their PA-E.
6a	Invoice payment receipt	SELLER	The SELLER receives payment for the invoice (outside the circuit).
6b	Issuance of "Payment Received" status	SELLER / PA-E	If the VAT on the invoice is payable upon receipt, the SELLER creates the "Payment Received" status and transmits it to the CdD PPF via its PA-E. The PA-E also transmits the "Payment Received" status to the PA-R for the attention of the BUYER.
6c	Receipt of "Paid" status by the BUYER	BUYER PA-R	The BUYER receives the "Received" status.
7	Receipt of "Paid" status by the PPF CdD	PPF Data Concentrator	The PPF Data Concentrator (CdD PPF) receives the "Payment Received" status.

The **"Payment Transmitted" status** indicates the amount paid using block MDG-43 of the life cycle message, if applicable with details of the applicable VAT rate (optional, requiring several iterations if multiple VAT rates apply), as follows:

- MDT-207 (Data Type Code): MPA (meaning "Amount Paid").
- MDT-215 (Amount): the amount paid with VAT.
- MDT-224: applicable VAT rate (optional, only if the BUYER wishes to inform the SELLER of the applicable VAT details in their payment).

The **"Received" status** MUST indicate the amount(s) received by applicable VAT rate, as follows:

- MDT-207 (Data type code): MEN (meaning "Amount received (with VAT)").
- MDT-215 (Amount): the Payment Amount Received with VAT.
- MDT-224: the VAT rate applicable to the amount received with VAT.

Example: an invoice for €1,160 with VAT, of which €600 without VAT at 20% VAT (€120) and €400 without VAT at 10% (€40):

- MDG-43 (1st occurrence):
 - ✓ MDT-207 (Data type code): MEN (meaning "Amount received (with VAT)").
 - ✓ MDT-215 (Amount): 720
 - ✓ MDT-224: 20
- MDG-43 (2nd occurrence):
 - ✓ MDT-207 (Data type code): MEN (meaning "Amount received (with VAT)").
 - ✓ MDT-215 (Amount): 440
 - ✓ MDT-224: 10

The diagram below illustrates the mechanics of invoice transmission and its life cycle. The white blocks represent the exchange of electronic invoices, life cycle statuses, and invoicing data (flow 1) that PA-E or PA-R issue or receive on behalf of their respective customers.

The gray blocks correspond to actions or steps that are outside the scope of PA-E and PA-R.

Figure2: Nominal case of invoice exchange

With regard to the life cycle, each Accredited Platform is required to:

- **Create the transmission phase statuses and make them available to their customers ("Rejected upon issuance" / "Submitted", "Sent", for the PA-E; "Rejected on receipt" / "Received", "Made available" for the PA-R).**
- **To transmit the statuses of the transmission phase to the Accredited Platform of the Counterparty, EXCEPT for the statuses "Sent" / "Submitted" and "Rejected" upon issuance, when set by the PA-E in charge of processing the issuance.**
- **To transmit to the Accredited Platform of the Counterparty the statuses it receives from its users or that its users create on the Accredited Platform.**
- **To make available to its users the life cycle statuses it has received from the Accredited Platform of the Counterparty or which it has set itself during the transmission phase.**

- To transmit to the PPF Data Concentrator (CdD), for invoices subject to e-invoicing, the mandatory statuses ("Submitted", "Rejected" (on issue or on receipt), "Refused", "Payment Received" when VAT is due on payment receipt), as well as flow 1 of the data required by the tax authorities for the PA-E in charge of processing on issue.

With regard to the life cycle, businesses subject to the reform are required to:

- Choose a reason for the "Refused" status from the list of usable reasons described in the description of the minimum base formats and profiles for invoices and life cycle statuses.
- Create, or have created on their behalf, a "Payment Received" status for each partial or total payment receipt of an invoice within the scope of the reform following payment of that invoice by the BUYER or by a third party on their behalf, when VAT is due upon receipt.

2.2 Rejection upon issuance

If any of the regulatory checks results in an error, the PA-E MUST reject the invoice. It creates the status "Rejected" (code 213), for which a reason must be given to explain the reason for the REJECTION. This status MUST be transmitted to the PPF Data Concentrator. It MUST NOT be transmitted to the invoice recipient. It MUST be made available to the SELLER (the issuer).

Step	Step name	Responsible actor	Description
1	Creation of the invoice for the BUYER	SELLER	Following a commercial transaction (order/delivery, service contract, spot purchase, etc.), the SELLER creates the invoice (flow 2) via its information system. It may entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing.
2	Rejection of the invoice and transmission of the "Rejected" status to the CdD PPF	PA-E	The PA-E has detected an error in the regulatory checks it is required to perform, including checking for duplicates with invoices it has already processed on behalf of the SELLER. It creates a "Rejected" status, which it sends to the CdD PPF and makes available to the SELLER.
1b	The SELLER cancels the rejected invoice in its accounts.	SELLER PA-E	The SELLER cancels the rejected invoice in its accounts, for example by creating an INTERNAL CREDIT NOTE (i.e., not sent to the recipient who did not receive the rejected invoice). It does not send it to its PA-E, except for archiving purposes only, if applicable. If the PA-E receives a CREDIT NOTE from the SELLER referring to a Rejected invoice, it MUST NOT forward it to the BUYER, nor send a 1 flow to the CdD PPF.

Figure3: Rejection upon issuance of an e-invoice

Obligations of the PA-E in the event of rejection upon issuance:

- **Set the status to "Rejected," with a reason for rejection from the list of applicable reasons, send it to the Cdd PPF, and make it available to the SELLER.**

Optional PA-E features in the event of rejection upon issuance:

- **If the SELLER sends its PA-E a CREDIT NOTE referring to an initial Rejected invoice referenced in BG-3 (reference to a previous invoice), the PA-E does not send the CREDIT NOTE to the BUYER and does not send a flow 1 of this credit note to the Cdd PPF.**

SELLER obligations in the event of Rejection on issue:

- **The SELLER MUST cancel the posting of an invoice that has been given a "Rejected" status by the PA-E, for example by creating an INTERNAL CREDIT NOTE that is not sent to the PA-E, based on the "Rejected" life cycle status, or sent to its PA-E for archiving purposes only and not for transmission.**

2.3 Compliant invoice but not transmitted due to the recipient not choosing an Accredited Platform

It may happen that the recipient subject to VAT, listed in the directory, has not chosen an Accredited Platform. This can be verified by consulting the PPF Directory («Annuaire») in advance. The recipient has at least one inactive SIREN address. In this case, the SELLER may use this inactive electronic address listed in the directory (since no other address is active) and send it to their PA-E.

The PA-E will carry out the various checks and may create a "Submitted" status and transmit flow 1 and this "Submitted" status to the PPF's Cdd. In this case, the "Submitted" status must contain a REASON "NOT_TRANSMITTED" to indicate to the PPF (and the tax authorities) that the BUYER does not have the necessary equipment.

As a reminder, the draft finance bill for 2026 provides for a quarterly penalty if it is found each quarter that a taxable entity is not equipped with at least one electronic invoicing address for receiving invoices, subject to its adoption.

The situation is then strictly the same as that of a paper invoice (or even a PDF invoice) not received by the BUYER. The SELLER should contact their customer and, if necessary, send them a duplicate of the invoice (e.g., a legible representation of it).

The BUYER cannot then demand a paper or PDF invoice, as it is the BUYER who is at fault for not receiving it.

Once the BUYER is equipped, the PA-E may, if it wishes to offer this service, for a period of time that it determines, resend the "NOT_SENT" invoices so that they reach the BUYER normally.

In any case, the SELLER must, if necessary, file a "Payment Received" status if VAT is due upon payment receipt. However, the BUYER cannot file a "Rejected" status since it is not connected to an Accredited Platform. This does not prevent the invoice from being processed, as was the case before the reform was implemented.

Step	Step name	Responsible party	Description
1	Creation of the invoice for the BUYER	SELLER	Following a commercial transaction (order/delivery, service contract, spot purchase, etc.), the SELLER creates the invoice (flow 2) via its information system. It can entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing.
2	Transmission of flow 1 and "Submitted" status	PA-E	Having carried out the regulatory compliance checks, including duplicate checks, the PA-E finds that there is no active electronic invoicing address (connected to a PA). It MUST create the status "Submitted" with the reason "NOT_TRANSMITTED" and send it to the Cdd of the PPF, along with the data required by the Administration (flow 1).

Step	Step name	Responsible party	Description
			It MUST also make the "Submitted" status with the reason "NOT_TRANSMITTED" available to the SELLER.
3	The SELLER contacts the BUYER to obtain payment	SELLER	The SELLER contacts the BUYER as in the case of an unpaid invoice, except that they know immediately that the BUYER has not received the invoice through no fault of their own. They may send a duplicate invoice by any means. They are not required to issue another invoice by any means other than sending an electronic invoice through their PA-E. Nor are they required to cancel their invoice (in this case by issuing a credit note treated in the same way as their invoice) and create a new one once the BUYER is equipped.
4 and 5	Processing of the invoice	BUYER	The BUYER and the SELLER process the invoice, which is paid.
6a and 6b	Payment receipt and "Payment received" status	SELLER / PA-E	If the VAT on the invoice is payable upon payment receipt, the SELLER creates the "Payment Received" status and transmits it to the PPF CdD via its PA-E.
7	Receipt of "Payment Received" status by the PPF CdD	PPF Data Concentrator	The PPF Data Concentrator (CdD PPF) receives the "Received" status.

Figure4: Invoice filed as "NOT_TRANSMITTED" due to lack of PA-R.

Obligations of the PA-E in the absence of an active BUYER address:

- If the invoice is deemed compliant, set the status to "Submitted" with the reason "NOT_TRANSMITTED," transmit it to the PPF Data Concentrator, and make it available to the SELLER. Transmit flow 1.

Optional PA-E features in the absence of an active BUYER address:

- The PA-E may offer to resend the invoice for several days, then, at the request of its customer, the SELLER, to resume the normal invoice life cycle, this option remaining available for a reasonable period (a few months, for example).

SELLER obligations if the BUYER does not have an active address:

- The SELLER MUST still issue the invoice via its e-invoicing platform. It may then (or beforehand) contact its customer to ensure that the latter is equipped to receive it. It MAY offer to send its customer a duplicate of the invoice (e.g., a LEGIBLE version of the invoice).
- The SELLER MUST file a Paid life cycle status after payment has been received, if VAT is due upon payment receipt.

2.4 Rejection upon receipt

When an invoice is received by a PA-R, the latter must carry out the regulatory checks. In the event of an error, the PA-R MUST reject the invoice. It creates the status "Rejected" (code 213), for which a reason must be given to explain the reason for the REJECTION. This status MUST be transmitted to the PPF Data Concentrator. It MUST be transmitted to the issuer of the invoice (the SELLER) through its PA-E. It MUST be made available to the BUYER for information purposes.

Step	Step name	Responsible party	Description
1	Creation of the invoice for the BUYER	SELLER	Following a commercial transaction (order/delivery, service contract, spot purchase, etc.), the SELLER creates the invoice (flow 2) via its information system. It can entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing.
2	Transmission of flow 1, the invoice (flow 2), and related statuses	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address, it MUST transmit the data required by the Administration (flow 1) to the PPF Data Concentrator (CdD PPF). It MUST transmit the invoice (stream 2 or stream 3) to the BUYER's PA-R. It must transmit the "Submitted" status to the CdD PPF.
3a 3b	Rejection of the invoice upon receipt	PA-R	The BUYER's platform (PA-R) receives the invoice (flow 2 or flow 3), performs the regulatory checks, and finds an error. It must create a "Rejected" status (code 213) with the reason for rejection and send it to the CdD PPF and the PA-E for the attention of the SELLER. It makes the status available to the BUYER but does not deliver the invoice to them unless requested to do so.
1b	The SELLER cancels the rejected invoice in the accounts.	SELLER	The SELLER cancels the rejected invoice in its accounts, for example by creating an INTERNAL CREDIT NOTE (i.e., not sent to the recipient who did not receive the invoice rejected by its PA-R). It does not send it to its PA-E, except for archiving purposes only, if applicable. If the E-PA receives a CREDIT NOTE from the SELLER referring to a Rejected invoice, it MUST NOT send it to the BUYER, nor send a 1 flow to the CdD PPF.

Figure5: Rejection of an invoice upon receipt

Obligations of the PA-R in the event of rejection upon receipt:

- Set the status to "Rejected," with a reason for rejection from the list of applicable reasons, send it to the CdD PPF and the PA-E, and make it available to the BUYER.

Obligations of the PA-E in the event of rejection upon receipt:

- Make the status "Rejected" available to the SELLER.

SELLER obligations in the event of rejection upon receipt:

- Cancel the posting of an invoice that has been given a "Rejected" status by PA-R, for example by creating an INTERNAL CREDIT NOTE that is not sent to PA-E (except for archiving purposes only), based on the "Rejected" life cycle status (supporting accounting document).

Optional PA-E features in the event of rejection upon receipt:

- If the SELLER sends its PA-E a CREDIT NOTE referring to an initial Rejected invoice referenced in BG-3 (reference to a previous invoice), the PA-E does not send the CREDIT NOTE to the BUYER and does not send a flow 1 of this credit note to the CdD PPF.

2.5 Refusal of an invoice by the BUYER (the recipient)

The BUYER may reject the invoice. As a result, the flow 1 sent in parallel with the issuance of the invoice to its recipient is ignored by the tax authorities for VAT pre-filling. In theory, this requires the SELLER to cancel the "Refused" invoice in its accounts, for example by creating an INTERNAL CREDIT NOTE that is not sent to the BUYER and without a flow 1 sent to the CdD PPF, and by creating a new invoice if necessary. On the BUYER's side, setting a "Refused" status leads either to the invoice not being recorded or to its cancellation, justified by the "Refused" status (to be kept as an accounting document). Consequently, the "Refused" status MUST NOT be used in the event of a dispute or disagreement over the content of an invoice, and MUST ALWAYS be accompanied by a reason for "Refusal" from the list of applicable reasons for Rejection, which correspond to:

- Either a regulatory non-compliance not tested by the PA-R (e.g., absence of a Purchase Order number provided prior to invoicing).
- Either a bill for an unknown transaction, i.e., for which the BUYER does not know the SELLER or has not purchased anything from them that would justify receiving a bill.

- Or, where applicable, a breach of contractual conditions preventing the recipient from processing the invoice, which must be limited to the provision of additional references from among those available in the semantic model of essential invoice data EN16931 and known to the SELLER at the time of invoicing.

The list of reasons for "Refusal" is described in Annex A of Standard XP Z12-012. To accommodate existing systems, a list of B2G rejection reasons has been added; this list can only be used for B2G invoices processed via CHORUS PRO.

For the Cdd PPF, any "Rejected" or "Refused" status assigned to an invoice cannot be followed by another status for that invoice. Therefore, once a "Rejected" or "Refused" status has been assigned, no other "mandatory" status can be assigned by the Accredited Platforms («Plateformes Agréées») or end users on behalf of the SELLER or BUYER (as a reminder, the "Mandatory" statuses are: "Submitted," "Rejected," "Refused," and "Payment Received").

A "Refused" status results in the VAT pre-count of the underlying invoice being cancelled as long as the status occurs within the VAT pre-filling period of the invoice. On the other hand, if the "Refused" status arrives after the VAT pre-filling period (for example, a status that arrives in May for an invoice issued in March that appears in the VAT return at the end of April), it has no impact on the following VAT pre-filling. This reinforces the good practice of issuing "Refused" statuses within days of receiving the invoice and switching to "Disputed" statuses beyond that period.

Step	Step name	Responsible party	Description
1	Creation of the invoice for the BUYER	SELLER	Following a commercial transaction (order/delivery, service contract, spot purchase, etc.), the SELLER creates the invoice (flow 2) via its information system. It may entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing.
2	Transmission of flow 1, the invoice (flow 2), and related statuses	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address, it MUST send the data required by the Administration (flow 1) to the PPF Data Concentrator (Cdd PPF). It MUST transmit the invoice (stream 2 or stream 3) to the BUYER's PA-R. It must transmit the "Submitted" status to the PPF Data Concentrator.
3	Receipt of the invoice	PA-R	The BUYER's platform (PA-R) receives the invoice (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER for processing.
4a 4b	Rejection of the invoice	BUYER PA-R	The BUYER processes the invoice and decides to reject it by selecting the reason for rejection from a strict list (see standard XP Z12-012). The PA-R transmits the status "Rejected," along with the reason, to the Cdd PPF and the PA-E, for the attention of the SELLER.
4c	Receipt of "Rejected" status	SELLER PA-E	The PA-E receives the "Rejected" status. It makes it available to the SELLER.
1a	The SELLER cancels the "Rejected" invoice in the accounts.	SELLER	The SELLER cancels the "Rejected" invoice in its accounts, for example by creating an INTERNAL CREDIT NOTE. It does not send it to its PA-E, except for archiving purposes only, if applicable. If the PA-E receives a CREDIT NOTE referring to a "Rejected" invoice from the SELLER, it must not send it to the BUYER, nor send a flow 1 to the Cdd PPF.
1b	If necessary, the BUYER cancels the registration of the invoice it has rejected.	BUYER	If the BUYER has already recorded the invoice in its accounts prior to its rejection, it must cancel it, as the "Rejected" status constitutes the supporting accounting document.

Figure6: Rejection of an invoice by the BUYER (recipient of the invoice)

NOTE: in the event of misuse of the "Rejected" status, or if this status is applied in error, the SELLER may decide to maintain its invoice and not cancel it in its accounts. They shall inform the BUYER of this outside of the life cycle exchanges. This may therefore lead to a dispute between the SELLER and the BUYER, or an agreement to maintain the invoice and not have to cancel it in the accounts on either side and to reissue an identical new invoice with a different issue date and potentially an impact on payment terms. However, the consequence remains that the pre-filled VAT will not take into account this retention and therefore the VAT on this "Rejected" invoice, both for the VAT collected on the SELLER's side and for the deductible VAT on the BUYER's side. This issue is likely to be clarified in a future version.

PA-R obligations in the event of refusal by the BUYER:

- **Transmit the "Rejected" status to the CdD PPF and the PA-E.**

Obligations of the PA-E in the event of refusal by the BUYER:

- **Provide the SELLER with the status "Refused" (with the reason).**

Optional PA-E features in the event of rejection by the BUYER:

- **If the SELLER sends its PA-E a CREDIT NOTE referring to an initial Rejected invoice referenced in BG-3 (reference to a previous invoice), the PA-E does not send the CREDIT NOTE to the BUYER and does not send flow 1 to the CdD PPF.**

Actions taken by the SELLER in the event of refusal by the BUYER:

- **Based on the "Rejected" life cycle status, the SELLER cancels the posting of the invoice on which the "Rejected" status has been placed by the BUYER, for example by creating an INTERNAL CREDIT NOTE that is not sent to the PA-E (except for archiving purposes only). This ensures that the VAT return will be aligned with the VAT pre-fill proposed by the tax authorities.**
- **However, the SELLER may contest the REFUSAL. In this case, they will initiate a dispute with the BUYER and will not create a CREDIT NOTE. This must be done outside of the life cycle status exchange. A future version of this Document will examine whether it is necessary to provide for a life cycle status exchange dedicated to this normally rare case. In this case, the SELLER's VAT return will retain the VAT on this invoice. If the BUYER finally accepts the invoice, then the SELLER and the BUYER will have**

a discrepancy between their VAT return and the pre-filled VAT return, equal to the VAT on the invoice, since the tax authorities will have canceled the VAT on the rejected invoice.

Actions taken by the BUYER in the event of refusal by the BUYER:

- Based on the "Rejected" life cycle status, the BUYER does not record the "Rejected" invoice or cancels its recording. The "Rejected" status serves as supporting documentation for, for example, posting a "Miscellaneous Transaction" entry to cancel a "Rejected" invoice. No CREDIT NOTE is therefore expected by the BUYER.
- However, the BUYER may contest the "Rejected" status. They may then finally accept the invoice and record it, then process it, which is currently organized outside of life cycle status exchanges. On the other hand, the BUYER's and SELLER's pre-filled VAT will show a discrepancy with the VAT return equal to the VAT on this "Rejected" invoice.

2.6 Management of a "Dispute" followed by a CREDIT NOTE

This case mainly describes how to manage a CREDIT NOTE that partially or totally cancels a disputed invoice.

Step	Step name	Responsible party	Description
1	Creation of invoice F1 for the BUYER	SELLER	Following a commercial transaction (order/delivery, service contract, spot purchase, etc.), the SELLER creates the invoice (flow 2) via its information system. It may entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing.
2	Transmission of flow 1, the invoice (flow 2), and related statuses	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address, it MUST send the data required by the Administration (flow 1) to the PPF Data Concentrator (CdD PPF). It MUST transmit the invoice (stream 2 or stream 3) to the BUYER's PA-R. It must transmit the "Submitted" status to the PPF Data Concentrator.
3	Receipt of the invoice	PA-R	The BUYER's platform (PA-R) receives the F1 invoice, performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER for processing.
4a 4b	Processing of the invoice and updating of statuses prior to payment	BUYER PA-R	The BUYER processes the invoice and notices a discrepancy with what is expected. They therefore set the status to "In Dispute," with a mandatory reason and, if applicable, an expected action (e.g., request for a CREDIT NOTE), to be sent to the SELLER via the PA-R and PA-E.
4c	Receipt of invoice statuses	SELLER	The SELLER receives the "In dispute" status of the invoice.

Step	Step name	Responsible party	Description
1 (F2)	Creation of a CREDIT	SELLER	The SELLER creates a CREDIT NOTE, either total or partial.
2	Transmission of the CREDIT NOTE	PA-E	The PA-E processes the CREDIT F2, transmits flow 1 and the "Submitted" status of F2 to the CdD PPF, and the CREDIT F2 to the PA-R.
3	Receipt of CREDIT	PA-R	The PA-R receives the F2 CREDIT, processes it, and makes it available to the BUYER.

4a 4b	Processing of the F2 CREDIT NOTE and the F1 INVOICE	BUYER	The BUYER approves the F1 Invoice that was in "Dispute" and the F2 CREDIT NOTE by setting the status to "Approved" on each document, potentially in a Life cycle status message common to F1 and F2.
4c	Receipt of F2 statuses	SELLER	The SELLER receives the "Approved" statuses for F1 and F2.
5a 5b	In the event of a partial CREDIT, payment and "Payment Sent" status.	BUYER	In the event of a partial credit, the BUYER pays the balance F1 – F2 and sends the status "Payment Sent" on F1 for the amount of the balance, or on F1 as positive and on F2 as negative.
5c	Receipt of payment statuses	SELLER	The seller receives the payment statuses from F1, or even F2.
6a 6b	Reconciliation of receipt (if partial credit note)	SELLER /PA-E	Reconciliation of cash receipts. If VAT is charged on receipt: • (Highly Recommended) create a "Received" status for F1 (total) and for F2 (negative amount), which allows the "Received" status to be considered final in this case (F1 and F2 definitively processed). • Or create a partial "Received" status on F1 (if partial payment), and nothing else. In this case, everyone must understand that F1 and F2 are definitively processed. Transmission of the "Received" status to PA-R and CdD PPF.
6c	Receipt of "Paid" statuses	BUYER	The BUYER receives the "Paid" statuses.
7	Receipt of "Paid" status by CdD PPF	CdD PPF	Receipt of "Paid" status by CdD PPF.

Figure7: Invoice in dispute, followed by a partial or total CREDIT NOTE

PA-R obligations in the event of "Disputed" status followed by a partial or total CREDIT NOTE:

- Transmit the "In Dispute" status from F1 to the PA-E, then process the F2 CREDIT NOTE as a normal invoice, with its statuses set by the BUYER.

Obligations of the PA-E in the event of "Disputed" status followed by a partial or total CREDIT NOTE:

- Provide the SELLER with the "In Dispute" status of F1, with its reason and required action, then process the CREDIT NOTE F2 as a normal invoice, including for the exchange of statuses set by the BUYER or the SELLER.

SELLER obligations in the event of "Disputed" status followed by a partial or total CREDIT NOTE:

- If the SELLER accepts the resolution of the dispute, they create a CREDIT NOTE F2 and then treat it as an invoice.

Obligations of the BUYER in the event of a "Disputed" status followed by a partial or total CREDIT NOTE:

- If they receive an F2 CREDIT NOTE, they treat it as an invoice. A good practice is to approve the F1 invoice and the CREDIT NOTE, then pay the balance as the result of the payment of the F1 invoice from which the amount of the F2 CREDIT NOTE is deducted.

2.7 Management of a "Dispute" followed by a Corrected Invoice

This case mainly describes how to manage a corrected invoice created to cancel and replace a disputed invoice.

Step	Step name	Responsible party	Description
1	Creation of invoice F1 for the BUYER	SELLER	Following a commercial transaction (order/delivery, service contract, spot purchase, etc.), the SELLER creates the invoice (flow 2) via its information system. It can entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing.
2	Transmission of flow 1, the invoice (flow 2), and related statuses	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address, it MUST transmit the data required by the Administration (flow 1) to the CdD PPF. It MUST transmit the invoice (flow 2 or flow 3) to the BUYER's PA-R. It must send the "Submitted" status to the CdD PPF.
3	Receipt of the invoice	PA-R	The BUYER's platform (PA-R) receives the F1 invoice, performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER for processing.
4a 4b	Processing of the invoice and updating of statuses prior to payment	BUYER PA-R	The BUYER processes the invoice and notices a discrepancy with what is expected. They therefore assign a "Disputed" status, with a mandatory reason and, if applicable, an expected action (e.g., request for a corrected invoice), to be sent to the SELLER via PA-R and PA-E.
4c	Receipt of invoice statuses	SELLER	The SELLER receives the "In dispute" status of the invoice and the request for a Corrected Invoice.

Step	Step name	Responsible party	Description
1 (F2)	Creation of a Corrected Invoice F2	SELLER	The SELLER creates a Corrected Invoice. It must reference the invoice it is canceling and replacing in BG-3 (previous invoice). From an accounting perspective, this means that the referenced invoice must be canceled and replaced by the Corrected Invoice.
2	Transmission of the F2 Corrected Invoice	PA-E	The PA-E processes the F2 invoice, transmits flow 1 and the "Submitted" status of F2 to the CdD PPF, and the Corrected Invoice F2 to the PA-R.
3	Receipt of the F2 Corrected Invoice	PA-R	The PA-R receives the F2 Corrected Invoice, processes it, and makes it available to the BUYER.
4a 4b	Processing of the F2 Corrected Invoice	BUYER	The BUYER processes the F2 Corrected Invoice, which begins with the cancellation of F1 (justified by the existence of F2), followed by the processing of F2 as a new invoice. To ensure that Invoice F1 does not remain indefinitely with the status "In Dispute," it may be useful to assign it the status "Canceled" and send it to the SELLER.
4c	Receipt of F2 statuses, or even "Canceled" status for F1	SELLER	The SELLER receives the status of F2 (presumably "Approved") and potentially the "Canceled" status of F1.
5a 5b	Payment of F2 invoice	BUYER / PA-R	The BUYER pays the F2 invoice to the SELLER. They can send a "Payment Sent" status to the SELLER via the PA-R (recommended).

Step	Step name	Responsible party	Description
	Creation and transmission of the "Payment transmitted" status.		
5c	Receipt of "Payment Transmitted" status	SELLER / PA-E	The SELLER receives the "Payment Transmitted" status for F2 from their PA-E.
6a 6b	Invoice payment receipt	SELLER	The SELLER receives payment for invoice F2 (outside the circuit).
6c	Issuance of "Payment Received" status	SELLER / PA-E	If the VAT on the F2 invoice is payable upon payment receipt, the SELLER creates the "Payment Received" status and transmits it to the CdD PPF via its PA-E. The PA-E also transmits the "Payment Received" status to the PA-R for the attention of the BUYER.
7	Receipt of "Paid" status by the BUYER	BUYER PA-R	The BUYER receives the "Received" status from F2.

Figure8: Invoice in dispute, followed by a Corrected Invoice

PA-R obligations in the event of "Disputed" status followed by a Corrected Invoice:

- **Transmit the "In Dispute" status of invoice F1 to the PA-E, then process the Corrected Invoice F2 as a normal invoice, with its statuses set by the BUYER.**

Obligations of the PA-E in the event of "Disputed" status followed by a Corrected Invoice:

- Provide the SELLER with the "In Dispute" status of invoice F1, with its reason and required action, then process the Corrected Invoice F2 as a normal invoice, including for the exchange of statuses set by the BUYER or SELLER.

SELLER's obligations in the event of "Disputed" status followed by a Corrected Invoice:

- If the SELLER accepts the resolution of the dispute by means of a Corrected Invoice, they shall create a Corrected Invoice F2, which cancels invoice F1 (cancellation entry to be organized), and then treat invoice F2 as an invoice. They can set the status of Invoice F1 to "Cancelled" to signify the end of the lifecycle and share this with the SELLER via their respective Pas.

Obligations of the BUYER in the event of "Disputed" status followed by a Corrected Invoice:

- If the BUYER receives a Corrected Invoice F2, they MUST cancel the posting of Invoice F1 in their accounts, then treat Invoice F2 as a standard invoice. To avoid leaving Invoice F1 in "Disputed" status indefinitely, they can set it to "Cancelled" status and share this with the SELLER via their respective Accredited Platforms («Plateformes Agréées»).

3 Description of the main use cases

3.1 Summary table of use cases

Category	ID	Use case
Multi-order/Multi-delivery	1	Case No. 1: Multi-order/Multi-delivery
Invoice already paid by a third party or the buyer	2	Case 2: Invoice already paid by the BUYER or a third-party PAYER at the time the invoice is issued
Invoice to be paid by a third party	3	Case 3: Invoice payable by a third-party PAYER known at the time of invoicing
	4	Case 4: Invoice payable by the buyer and partially covered by a third party known at the time of invoicing (subsidy, insurance, etc.)
Expenses paid by third parties with invoice	5	Case No. 5: Expenses paid by employees with invoices in the company's name
Expenses paid by third parties without invoice	6	Case No. 6: Expenses paid by employees without an invoice addressed to the company (simple receipt or invoice made out to the employee's name and address)
Invoice paid by a third party	7	Case No. 7: Invoice following a purchase paid for with a corporate card (purchasing card)
Invoice payable to a third party	8	Case No. 8: Invoice payable to a third party determined at the time of invoicing (factoring, cash pooling)
	9	Case No. 9: Invoice payable to a third party known at the time of invoicing, who also manages the order/receipt, or even invoicing (Distributor / Depository)
	10	Case No. 10: Invoice payable to a third-party payee unknown at the time the invoice was created, in particular a factoring company (case of subrogation)
Invoice with "addressed to" different from the buyer	11	Case No. 11: Invoice to be received and processed by a third party on behalf of the BUYER

Category	ID	Use case
Transparent intermediary	12	Case No. 12: Transparent intermediary managing invoices for its principal BUYER
Subcontracting invoice for direct payment	13	Case No. 13: Invoice payable by a third party: subcontracting with direct payment or payment delegation
Co-contracting invoice	14	Case No. 14: Invoice payable by a third party: joint contracting case B2B
Invoice following an order/payment by a third party on behalf of the buyer	15	Case No. 15: Sales invoice following an order (and possible payment) by a third party on behalf of the BUYER ()
	16	Case No. 16: Expense invoice for reimbursement of the sales invoice paid by the third party
Invoice issued by a third party, payment intermediary	17a	Case No. 17a: Invoice payable to a third party, payment intermediary (e.g., on Marketplace)
Invoice issued by a third party, payment intermediary and invoicing mandate	17b	Case No. 17b: Invoice payable to a third party, payment intermediary, and third-party invoicing under an invoicing mandate
Debit notes	18	Case No. 18: Management of debit notes
Invoices issued under third-party mandate	19a	Case No. 19a: Invoice issued by a third-party invoicing with an invoicing mandate
Self-billing	19b	Case No. 19b: Self-billing
Pre-payment invoice	20	Cases 20 and 21: Pre-payment invoice and final invoice after advance payment
	21	
Invoice with allowance	22	Case No. 22a: Invoice paid with early payment discount for services for which VAT is payable upon receipt of payment
	22b	Case No. 22b: Invoice paid with allowance for deliveries of goods (or provision of services with VAT option on debits)
Self-billing between an individual and a professional	23	Case No. 23: Self-billing flow between an individual and a professional
Deposit ("Arrhes")	24	Case No. 24: Management of
Gift vouchers and cards	25	Case No. 25: Management of vouchers and gift cards
Invoices with contractual reservation clauses	26	Case No. 26: Invoices with contractual reservation clauses
Toll tickets	27	Case No. 27: Management of toll tickets sold to a taxable entity
Restaurant receipts	28	Case No. 28: Management of restaurant bills issued by a SELLER subject to tax established in France
Single Taxable Entity and members of the Single Taxable Entity	29	Case No. 29: Single Taxable Entity within the meaning of Article 256 C of the CGI
E-reporting transaction subject to an invoice or "VAT already collected"	30	Case No. 30: VAT already collected - Transactions initially processed in B2C <i>e-reporting</i> , subject to a <i>retrospective</i> invoice
Mixed invoices	31	Case No. 31: "Mixed" invoices mentioning a main transaction and an ancillary transaction
Management of monthly payments	32	Case No. 32: Monthly payments

Category	ID	Use case
VAT regime on the margin	33	Case No. 33: Transactions subject to the margin scheme -profit
Partial payment receipt and cancellation of payment receipt	34	Case No. 34: Partial payment receipt and cancellation of payment receipt
Author's notes	35	Case No. 35: Author's notes
Professional secrecy	36	Case No. 36: Transactions subject to professional secrecy and exchanges of sensitive data
Joint ventures	37	Case No. 37:
Invoice sub-lines	38	Case No. 38: Invoices with sub-lines and line groupings
Multi-Vendors	39	Case No. 39: Transparent intermediary consolidating sales from multiple Sellers for the same buyer – Multi-Vendor Invoice
Offsetting between cross-flows	40	Case No. 40: Grouped payments, netting, or compensation in the event of cross-purchases/sales, bidirectional billing
Barter practices	41	Case No. 41 Barter Companies
Tax exemption	42	Case No. 42: Tax exemption management
International B2B operations	43	Case No. 43: E-reporting for international B2B Case No. 43a: Triangular transactions Case No. 43b: Stock transfers treated as intra-Community supply
Operations with French DROM / COM / TAAF	44	Case No. 44: Transactions with entities established in the DROMs/COMs/TAAFs Port Tax (« Octroi de mer »)

3.2 Handling of the main cases

3.2.1 General

First, the instruction of these use cases were first examined in accordance with the following two principles, insofar as possible:

- **"Same problems, same solutions"**: the issues raised by companies through use cases are sometimes very similar from one sector to another.
- **"Do not export complexity to counterparties"**: there are sector-specific issues, but it is important not to resolve them by imposing specific constraints on the outside world, or at least as little as possible.

The use cases discussed below can lead to two types of resolution:

- Indicate which data from the EN16931 model can be used to codify certain invoices and, if necessary, use the EXTENDED-CTC-FR profile to obtain additional data.
- Indicate how third parties can interact with the management process.

3.2.1.1 Third-party management

For the second type of use case, several third parties are provided for in the EXTENDED-CTC-FR profile. However, these third parties generally act either on behalf of the SELLER or on behalf of the BUYER. It is therefore primarily up to the PA-E and PA-R to propose solutions to allow these third parties to access invoices and life cycle statuses in order to act on behalf of the SELLER or the BUYER.

The diagram below illustrates the organization of third parties around the SELLER's and BUYER's central Accredited Platforms ("Plateformes Agréées"). Information sharing or third-party interactions are thus organized around these

central Accredited Platforms ("Plateformes Agréées"), either because third parties have access to one of the two Accredited Platforms ("Plateformes Agréées"), for example through the standard API covered by Standard XP Z12-013, or because they interact by exchanging status and invoice files, for example through the PEPPOL network. In both cases, this means that they must be listed on the Accredited Platform where they operate and that they have delegation rights over invoices issued by or on behalf of the SELLER or those received by the BUYER.

The management of these rights can be facilitated by seeing the Third Parties named in the invoices. This is why different roles have been provided for in the EXTENDED-CTC-FR profile:

- The PAYER third party (EXT-FR-FE-BG-02)
- The BUYER'S AGENT third party (EXT-FR-FE-BG-01)
- The SELLER'S AGENT third party (EXT-FR-FE-BG-03)
- The INVOICER third party (EXT-FR-FE-BG-05), the SELLER's AGENT for creating and transmitting the SELLER's invoices on its behalf.
- The third party "ADRESSEE" or "INVOICEE" (EXT-FR-FE-BG-04), responsible for processing invoices on behalf of the BUYER.

Figure9: Organization of third parties around the BUYER's and SELLER's Accredited Platforms («Plateformes Agréées»)

The presence of these third parties in invoices can help organize access rights or actions on invoices. However, these rights can also be organized independently by the Accredited Platform, which may wish to associate them with a management process.

This means that the SELLER is not required to use the EXTENDED-CTC-FR profile, but above all means that SELLERS do not have to manage a list of third parties acting on behalf of the BUYER to be included in their invoices, particularly when these third parties do not need to be contacted directly by the SELLER, but are only involved due to the specific requirements of the BUYER.

For example, the BUYER's Accredited Platform may provide for roles associated with certain rights and organize a third-party repository, such as, for example, a Chartered Accountant, who may have rights to access invoices, monitor statuses, and sometimes file certain invoices, a function quite similar to a "To" field on the BUYER side, but without requiring suppliers to name them in invoices.

In the diagram above, we can also see that the two Accredited Platforms («Plateformes Agréées») are linked to OD/SC (Compatible Solution). This reflects the reality that Accredited Platforms («Plateformes Agréées») are primarily platforms responsible for checking invoices and their transmission (issuance and receipt), as well as the related life cycle statuses, and that most of the functions upstream and downstream of this exchange of invoices and statuses, namely the creation of invoices and statuses, reconciliation, validation, accounting, payment, archiving, etc., can be offered by OD/SC (Compatible Solutions). When Accredited Platforms («Plateformes Agréées») themselves have OD/SC-type solutions (Compatible Solution), interaction with users and third parties can then be organized using

these solutions, provided that they are subject to the same security and hosting requirements as Accredited Platforms («Plateformes Agréées») (ISO 27001, hosting in the EU, etc.).

A number of use cases involve third parties that are "transparent" in the sense that they act on behalf of either the SELLER to issue the invoice on their behalf (in the position of INVOICER), or the BUYER to process the invoice on their behalf (MANAGER in the position of ADDRESSEE). In order to maintain the principle of an exchange of invoices between a SELLER and a BUYER, it is therefore necessary for the issuing PA-E and receiving PA-R to take into account the SELLER and BUYER respectively, who are therefore users without necessarily being customers.

Figure10: Transparent third-party invoicing and third-party authorized agent

For example, the THIRD PARTY AGENT, who has a mandate from the BUYER to receive and process certain purchase invoices from the BUYER, may open an account in the name of this BUYER, for a dedicated SIRENacheteur_GESTIONTIERS electronic address, and take charge of the contractual and commercial aspects with the PA-R in charge of this electronic address for receiving invoices, which happens to be that of the BUYER AND the AGENT. The AGENT can then integrate all of this into its own service provision to its BUYER client.

Similarly, the PA-E may be chosen by the third-party INVOICER, with the agreement of the SELLER within the framework of an invoicing mandate. In practice, it is common to both the SELLER and the INVOICER, with the INVOICER taking charge of the contractual and commercial aspects with the PA-E (PA-SELLER and INVOICER). The INVOICER may decide to integrate the use of this PA-E into its overall service provision.

3.2.1.2 Access by third parties to invoices and their lifecycles

Third-party access to invoices and lifecycles can be organized around the BUYER's or SELLER's hub platform in two ways:

- By making third parties users of the pivot Accredited Platform, thus giving them their own access, i.e. as a third-party entity with its own access and not just the same access as the SELLER or BUYER on whose behalf the third party is acting, then implementing a rights delegation feature allowing the third party to view or even act on the life cycle of an invoice on behalf of the SELLER or BUYER. The third party can then use the Standard API of the XP Z12-013 Standard to connect its information system to the Approved Hub Platform and interact with all the accounts for which it has delegation.
- Through message exchanges between the SELLER's or BUYER's pivot platform and the third party's platform, for example using the PEPPOL network exchange protocol. To do this, the third party must first be listed on the pivot platform of the VAT Registered entity for whom they are the third party, with the electronic address at which the third party can be reached via the PEPPOL network. Their scope of action must then also be defined, i.e., which invoices or statuses must be sent to them, and which statuses they can send in return. Once this is in place, the pivot platform can organize the sharing of invoices and statuses by exchanging life cycle status messages (CDAR) with the third party's platform, which allow the context to be indicated and, if necessary, an invoice to be sent as an attachment.

Regarding this second option, by way of illustration, if an invoice is to be shared with a validating third party:

- The BUYER's Accredited Platform can send a status message with the invoice attached to the third-party validator, with a status including, for example, "Request for validation" as the expected action.
- The validator third party can respond with the appropriate status message ("Reviewed", "Approved", "In dispute", etc.).
- If the invoice must then be paid by a third party, the VAT Registered entity may send a "Payment Request" status via its Approved Pivot Platform to the PAYER third party, who may respond with a "Payment Sent" status.

The same mechanism can be implemented in the case of factoring after transmission of invoices (see use case No. 10). In this case, the SELLER's Accredited Platform is the pivot platform:

- The pivot platform transmits a "Factored" status, attaching the invoice. This status contains the history of the life cycle statuses.
- Then, for each status received by the pivot platform, the equivalent status is transmitted to the third-party factoring platform.

The use of PEPPOL as a messaging system associated with the life cycle message (CDAR as described in Standard XP Z12-012) allows these exchanges to be organized.

To do this, additional status values (to be positioned in MDT-105 of the life cycle message), as well as expected actions (in MDT-121) can be defined to standardize these exchanges.

In practical terms, PEPPOL exchanges operate on the basis of electronic addresses to be entered in an envelope (SBDH), identifying on the one hand the sender (known as C1), whose electronic address ("EndPoint") corresponds to the address to which replies must be sent, and on the other hand the recipient (known as C4), to whom the life cycle status message is addressed. The PEPPOL network protocol then uses these electronic addresses ("EndPoints") to determine which PEPPOL Access Point (i.e., the recipient's platform) is responsible for the recipient's address and thus transmits the status message securely.

Again, by way of illustration, if a BUYER wishes to send a payment request to a third-party PAYER:

- The envelope (SBDH) will contain, for example, 0225:SIRENAcheteur_CDVTIERS as the C1 address, then 0225:SIRENPayer_CDVTIERSPAYEUR (or any other "EndPoint" electronic address accepted in the PEPPOL network) as the third-party payer address (C4).
- The Life Cycle message will identify:
 - ✓ The Buyer as the issuer of the message (MDG-16)
 - ✓ The Third Party PAYER as the Recipient (MDG-23),
 - ✓ The invoice as the "Subject of the response" (MDG-32), in which:
 - The identification details of the invoice to be paid will be provided (Invoice Number, Invoice Date, and SELLER ID).
 - The invoice will be attached (MDT-96).
 - A status code meaning "Payment Request" will be provided in MDT-105.
 - And if necessary, the status detail block can be used with the MDG-43 block to provide more details, such as the amount to be paid and the bank details of the payment beneficiary.

With these principles presented, this chapter will be completed in a future version of the status sets and required actions, as well as how to provide all the necessary context elements through the Life Cycle message.

3.2.1.3 Additional life cycle statuses

Analysis of use cases, and in particular what is described in the section on sharing with third parties above, reveals the need to add additional life cycle statuses alongside the processing statuses, to which the status "Cancelled" ("Annulée") shall also be added, namely:

- For factoring: "Factored," "Factored Confidential," "Not Factored," and "Change of Account Payable."
- For co-contracting with direct payment: "Direct Payment Request"
- And others to come in a later version of this document.

3.2.2 Case No. 1: Multi-order/Multi-delivery

The EN16931 standard does not allow the transmission of multi-order/multi-delivery invoices.

In order to be able to transmit these invoices, extensions have been added to manage multiple orders/deliveries on the invoice. It is therefore possible to refer to an order or a shipping notice, or to specify a delivery address at the invoice line level (block BG-25).

The following information is concerned (see description of formats for the EXTENDED-CTC-FR profile):

- Order number on the line (EXT-FR-FE-135 – Order ID relating to the invoice line)
- Shipping notice number on the line (EXT-US-FE-140) and shipping notice line (EXT-US-FE-141).
- Delivery information in the event of different delivery addresses:
 - ✓ Delivery address details per line (multi-delivery management) (block EXT-FR-FE-BG-10);
 - ✓ Global location identifier (EXT-FR-FE-146) and its scheme identifier (EXT-FR-FE-148), for example 0088 for a GLN;
 - ✓ Place name (EXT-FR-FE-149) - Name of the delivery location;
 - ✓ Address lines (EXT-FR-FE-150) - Postal delivery address block per line (3 lines, postal code, city, country subdivision, country code).

This makes it possible to create multi-order invoices by entering the orders on the line, or multi-delivery invoices by entering the shipping notices and delivery addresses on the line (if there are multiple), or even multi-order AND multi-delivery invoices.

It is permitted to create periodic invoices, i.e., to invoice a set of services or deliveries of goods. This can be done with a single order and a single delivery address, without the need to provide shipping notices. In this case, it is not necessary to use the ability to provide the items listed above.

Obligations of PA-E and PA-R:

- **Know how to process the minimum base formats and profiles.**

Obligations of the SELLER and BUYER:

- **Know how to process the minimum base formats and profiles, in particular the EXTENDED-CTC-FR profile.**

3.2.3 Case 2: Invoice already paid by the BUYER or a third-party PAYER at the time the invoice is issued

This could be, for example, an invoice sent after the delivery of an order paid for at the time of ordering (within a short period of time so that the payment is not considered an advance payment, which should have been the subject of a pre-payment invoice, followed by a final invoice; see use cases 20 and 21). It may also be an invoice for which the Seller has a debt to the Buyer (for example, for an overpayment on a previous invoice) equal to at least the total amount with VAT of the invoice and wishes to settle this debt for the total amount with VAT of the invoice.

The specific characteristics of the data and associated management rules are as follows:

- "Cadre de Facturation" (Business process type: BT-23) "Submission of an invoice already paid" (B2 / S2 / M2) or "Cadre de Facturation" B1 / S1 / M1;
- Amount paid (BT-113) equal to the total amount with VAT of the invoice (BT-112);
- Therefore, the Amount payable (BT-115) is equal to 0;
- The Due date (BT-9), if present, is equal to the invoice payment date (prior to or equal to the invoice date);
- If VAT is payable upon payment receipt (service invoice ("Cadre de Facturation" S2 or S1) for which the SELLER has not opted for debits, i.e. with BT-8 absent, or present and meaning "upon payment receipt" (72 in UN/CEFACT CII and 432 in UBL)), the SELLER MUST send a "Payment Received" life cycle status (via a Life cycle 6 flow) to its PA-E so that it can be sent to the PPF's CdD and the BUYER's PA-R. This status MAY be sent at the same time as the invoice is issued and MUST be sent during the e-reporting period for payment data (and therefore no later than the end date of the e-reporting payment period, for example the 10th of the following month in the case of the standard VAT regime);

- If the invoice has been paid by a Third-Party PAYER, this MAY be indicated in the invoice in the PAYER block (EXT-FR-FE-BG-02).

NOTE: pre-payment invoices after an advance payment are also invoices which have already been paid, which have the particularity of always being subject to VAT upon receipt, even if they are pre-payment invoices for the sale of goods (see use cases 20 and 21) and must therefore always be subject to a “Payment Received” status.

Figure11: Invoice already paid by the BUYER or a third-party PAYER

In the event that the Buyer requests a CREDIT NOTE on an invoice that has already been paid, there are two possible scenarios:

- The BUYER wants a credit note and a new invoice corrected (for example, in the event of an error in certain data). In this case, it is preferable that the CREDIT NOTE also be a CREDIT NOTE that has already been paid (i.e., with BT-113 = BT-112 and BT-115 = 0), completely cancelling the invoice that has already been paid (including the lettering with the payment), followed by a new invoice corrected, which has also already been paid.
- The BUYER wants the invoice cancelled and the payment refunded:
 - ✓ If the refund is not made: the CREDIT NOTE cancels the invoice and leaves a Net Amount Payable (BT-115) equal to the total with VAT amount (BT-112), which means that the SELLER must pay the Net Amount to be Paid (BT-115) to the BUYER (and, if applicable, keeps it on account for the payment of another invoice).
 - ✓ If the CREDIT NOTE is made after the refund, then it is itself already paid (and therefore with BT-113 = BT-112 and BT-115 = 0).

Obligations of PA-E and PD-R:

- **Know how to handle minimum base formats and profiles.**

SELLER obligations:

- **Create the "Payment Received" status in parallel with the invoice, if VAT is due upon receipt of payment, and transmit it via its PA-E.**

Optional PA-E feature:

- **Propose the creation of the "Payment Received" life cycle message on behalf of the SELLER in the case of an invoice that has already been paid, based on the invoice data (BT-8 value, "Cadre de Facturation" S2/B2/M2, BT-9 for the date, VAT footer, etc.).**

3.2.4 Case 3: Invoice payable by a third-party PAYER known at the time of invoicing

The invoice is sent by the SELLER to the BUYER, who is responsible for forwarding it to the third-party PAYER after settlement or validation.

The steps in case no. 3, illustrated in the diagram below, are as follows:

Step	Name of step	Responsible actor	Description
1	Creation of the invoice for the buyer	SELLER	The SELLER creates the invoice (flow 2) via its information system. It may entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing.
2	Issuance of the invoice and transmission of flow 1 data to the PPF	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, it MUST transmit the data required by the Administration (flow 1) to the CdD PPF. It MUST also transmit the invoice (flow 2 or flow 3) to the PA-R of the BUYER. It must send the "Submitted" status to the CdD PPF.
3	Receipt of the invoice	PA-R	The BUYER's platform (PA-R) receives the invoice (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER for processing.
4a 4b	Processing of the invoice and updating of statuses	BUYER	The BUYER processes the invoice and sets the corresponding processing statuses in its PA-R ("Rejected," "Accepted," "In dispute," "Approved," "Partially approved," "Suspended," etc.) for transmission to the SELLER via its PA-E.
4c	Receipt of invoice statuses	SELLER	The SELLER receives the invoice statuses following the processing of the invoice by the BUYER in accordance with the terms of the life cycle.
4d	Notification of the Third-Party PAYER of the Approval of the invoice for payment	BUYER	The BUYER may provide the PAYER with information on the correct processing of the invoice and on the account to be paid (the one indicated on the invoice or modified during the life cycle, for example in the case of factoring), thereby triggering its payment (PA-R interface ⇔ Third-party PAYER, directly or via its OD/SC (Compatible Solution) or its Accredited Platform, to be implemented).
5a 5b	Payment of the invoice Information for the BUYER	Third-party PAYER	The PAYER pays the invoice and informs the BUYER of this payment and its terms: payment method, account paid, payment reference (if applicable) (PA-R interface ⇔ OD/SC (Compatible Solution)/Approved PAYER Platform to be implemented or managed outside the circuit).
5c	Issuance of the "Payment Transmitted" status by the BUYER to the SELLER	BUYER	The BUYER sends a "Payment Transmitted" status to the SELLER.
5d	Receipt of "Payment Transmitted" status	SELLER / PA-E	The SELLER receives the "Payment Sent" status from their PA-E.

Step	Name of step	Responsible actor	Description
6a	Payment receipt for the invoice	SELLER	The SELLER receives payment for the invoice (outside the circuit).
6b	Issuance of "Payment Received" status	SELLER	If the VAT on the invoice is payable upon Payment receipt, the SELLER creates the " Payment Received" status and transmits it to the PPF CdD via its PA-E. The PA-E also transmits the " Payment Received" status to the PA-R for the attention of the BUYER.
6c 6d	Receipt of the Paid status by the BUYER and sharing with the PAYER	BUYER	The BUYER receives the " Payment Received" status and informs the third-party PAYER.
7	Receipt of "Payment Received" status by the CdD-PPF	CdD PPF	The PPF Data Concentrator (CdD PPF) receives the "Paid" status.

Figure12: Invoice to be paid by a third party designated for invoicing

Using the EXTENDED-CTC-FR profile, it is possible to name the PAYER third party in the invoice:

- Block EXT-FR-FE-BG-02, and in particular:
 - ✓ Its company name (EXT-FR-FE-43)
 - ✓ Its legal identifier (EXT-FR-FE-48): SIREN number, qualified with 0002 (EXT-FR-FE-49), optional
 - ✓ One or more identifiers (EXT-FR-FE-46) with its identification scheme qualifier (EXT-FR-FE-47), which allows you to indicate a GLN, DUNS, SIRET, etc. See the list of ISO6523 codes for base formats.
 - ✓ An electronic address (EXT-FR-FE-52), which can be very useful for contacting the PAYING third party directly if necessary (see use case no. 13 for Subcontracting with direct payment from the end Buyer).

Exchanges between the BUYER and the third-party PAYER can be organized as long as the third-party PAYER is listed on the PA-R as a third-party PAYER and has direct access or access via its own platform (OD/SC (Compatible Solution) or PA) to the invoice and its life cycle. Where applicable, the BUYER may delegate the right to set the status to "Payment Transmitted" to the third-party PAYER on its behalf.

If the SELLER is informed of the existence of a third-party PAYER, referencing it in the invoice may allow the BUYER to organize its processing procedure to give the third-party PAYER access to the invoice and its life cycle once it is named in the invoice.

However, in this use case where the third-party PAYER is linked solely to the BUYER's organization, best practice is to let the BUYER manage its relationship with the third-party PAYER in order to make this specificity transparent to the SELLER, and not to ask the SELLER to manage this third-party PAYER in its invoices and therefore in its information system.

NOTE: Only one Third-Party Payer can be entered in the invoice in the EXT-FR-FE-BG-02 block, which is not repeatable.

NOTE: in some cases, the THIRD-PARTY PAYER can also connect directly to the PA-E, if they are referenced and have rights granted by the Issuer on the PA-E. In particular, they must have access to the life cycle statuses to ensure that the invoice is approved.

NOTE: if the third-party PAYER is an individual (e.g., an employee), care must be taken to comply with GDPR regulations. See use cases 5, 6, and 7.

Obligations of PA-E and PA-R:

- **Know how to process the minimum base formats and profiles.**

Obligations of the BUYER:

- **Organize interaction with their third-party PAYER, either by listing them on their PA-R as having delegation to access invoices that the BUYER has decided to have paid by this third-party PAYER, or by organizing within their OD/SC (Compatible Solution) or information system the necessary interconnections for the payment instruction of invoices and the return of execution of these payments for the creation of the "Payment transmitted" status.**

Optional PA-R feature:

- **Offer a service enabling third parties to be referenced for its "BUYER" customers, giving them access via various channels (Portal, standard API, EDI), associated with a delegation to open access to invoices to be paid by a third-party PAYER, and to their life cycle, and a right to create a "Payment transmitted" status.**

3.2.5 Case 4: Invoice payable by the buyer and partially covered by a third party known at the time of invoicing (subsidy, insurance, etc.)

This management case covers invoices partially paid by a third party directly to the SELLER (for example, a repair invoice where the deductible, and VAT if deductible, are paid by the BUYER, with the balance being paid in parallel by the insurer).

Under the current provisions of standard EN16931 and the CII and UBL formats, it is not possible to indicate multiple third-party PAYERS, which would allow the various payments and parties involved to be identified.

However, it is possible to indicate a third-party PAYER (only one) in the PAYER block (Block EXT-FR-FE-BG-02) of the EXTENDED-CTC-FR profile, with the BUYER also retaining the option to transmit a payment.

The specific features of the data and the associated management rules are as follows:

- The SELLER block (BG-4) is used to provide information about the SELLER;
- The BUYER block (BG-7) is used to provide information about the BUYER who is to pay the invoice (e.g., the company that has to pay a deductible);
- The INVOICE PAYER block (EXT-FR-FE-BG-02) is used if you wish to mention the third-party PAYER (e.g., the insurer) on the invoice.
- The AMOUNT PAID field (BT-113) MUST then be used to enter the amount of the invoice that has already been paid or that will be paid by a third-party PAYER requested directly by the SELLER (e.g., the amount of the invoice covered by the insurer).
- This will ensure that the "Net amount payable" (BT-115) is correct, equal to the total amount with VAT of the invoice (BT-112), minus the amount already paid (BT-113, also used to indicate an amount to be paid by a third party).

- The INVOICE NOTE block (BG-1) can be used to indicate that part of the invoice has already been paid or will be paid by one or more third parties. More specifically, in the BILL NOTE SUBJECT CODE field (BT-21), the SELLER must enter the code "PAI," which allows payment information to be indicated.
- The payment data expected by the administration corresponds to the date of receipt and the amount received. Therefore, the SELLER may declare a single payment if they receive the entire amount of the invoice on the same day. If they receive two payments on different days, they must declare two payments, one from the BUYER and the other from the third-party PAYER known at the time of invoicing.
- However, care must be taken with the VAT details provided, as the payment statuses must contain the VAT details for each payment. Thus, in the specific case of a partial payment by an insurer received at the same time:
 - ✓ If the insurer reimbursed VAT that was otherwise deductible, this would amount to a gain for the company equal to the VAT paid by the insurer. Consequently, in this case, the insurer pays the amount without VAT minus the deductible, and the BUYER must pay the deductible and all VAT on the invoice.
 - ✓ The e-reporting of the amount paid by the BUYER MUST therefore indicate at least two blocks of expected payment information (MDG-43 of the CDAR message, with block type code MDT-207 equal to "MEN" meaning "amount with VAT collected"):
 - A positive payment received of the amount with VAT (MDT-215), with the applicable VAT rate (MDT-224). In the event of multiple VAT rates, there must be as many records of amounts received as there are applicable VAT rates.
 - A negative payment received of the amount to be paid by the insurer and to which VAT does not apply (MDT-215 = amount to be paid/paid by the insurer, MDT-224 = 0)
 - ✓ E-reporting of the amount paid by the insurer that is not subject to VAT: MDT-215 = amount paid by the insurer and MDT-224 (applicable VAT rate) = 0.

The steps in case no. 4, illustrated in the diagram below, are as follows:

Step	Name of step	Responsible actor	Description
1	Creation of the invoice for the buyer	SELLER	The SELLER creates the invoice (flow 2) via its information system. It may entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing. The SELLER specifies in their invoice the amount paid by the third party (completed blocks AMOUNT ALREADY PAID (BT-113) and THIRD-PARTY PAYER (EXT-FR-FE-BG-02)).
2	Transmission of flow 1 data	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, it MUST transmit the data required by the Administration (flow 1) to the CdD PPF. It MUST also transmit the invoice (flow 2 or flow 3) to the PA-R of the BUYER. It must send the status "Submitted" to the CdD PPF.
3	Receipt of the invoice	PA-R	The BUYER's platform (PA-R) receives the invoice (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER for processing.
4a 4b	Processing of the invoice and updating of statuses prior to payment	BUYER	The BUYER processes the invoice and sets the corresponding processing statuses in its PA-R ("Rejected," "Accepted," "In dispute," "Approved," "Partially approved," "Suspended," etc.) for transmission to the SELLER via its PA-E.
4c	Receipt of invoice statuses	SELLER	The SELLER receives the invoice statuses following the processing of the invoice by the BUYER in accordance with the terms of the life cycle.

Step	Name of step	Responsible actor	Description
4d	Notification of the third-party PAYER for payment of their share	SELLER	The SELLER informs the third-party PAYER that the invoice has been sent to the BUYER, including details of the life cycle status where applicable, and requests payment of the portion covered by the third-party PAYER.
5a	Payment of the balance of the invoice by the BUYER and transmission of the "Payment transmitted" status.	BUYER / PA-R	The BUYER pays the balance of the invoice to the SELLER. They may send a "Payment Sent" status to the SELLER via the PA-R (recommended).
5b	Payment of the portion of the invoice covered by the third-party PAYER Information for the SELLER	Third-party PAYER	The third-party PAYER pays the invoice and informs the SELLER, for example by sending a "Payment Transmitted" status (recommended).
6a	Payment Receipt of the invoice amount paid by the buyer	SELLER	The SELLER receives the invoice amount paid by the BUYER.
6b	Payment Receipt of the invoice amount paid by the third party	SELLER	The SELLER receives the invoice amount paid by the third-party PAYER.
6c	Issuance of the "Payment Received" status for the receipt of the portion paid by the BUYER	SALES ASSISTANT / PA-E	If the VAT on the invoice is payable upon receipt of payment, the SELLER creates the "Received" status corresponding to the amount paid by the BUYER, with the correct VAT details, and transmits it to the CdD PPF via its PA-E. The PA-E also transmits the "Received" status to the PA-R for the attention of the BUYER.
6d	Issuance of the "Payment Received" status for the receipt of the portion paid by the third-party PAYER	SELLER / PA-E	If the VAT on the invoice is payable upon Payment receipt, the SELLER creates the "Payment Received" status corresponding to the amount paid by the third-party PAYER, with the correct VAT details, and transmits it to the CdD PPF via its PA-E. The PA-E also transmits the "Payment Received" status to the PA-R for the attention of the BUYER.
6	Receipt of the "Received" status by the BUYER	BUYER PA-R	The BUYER receives the "Payment Received" status(es).
7	Receipt of "Paid" status(es) by the CdD PPF	PPF Data Concentrator	The PPF Data Concentrator (CdD PPF) receives the "Paid" status(es).

Figure13: Invoice payable by the buyer and partially covered by a third party known at the time of invoicing (subsidy, insurance, etc.)

NOTE: Only one THIRD-PARTY PAYER can be entered in the invoice in block EXT-FR-FE-BG-02, which is not repeatable.

NOTE: in some cases, the THIRD-PARTY PAYER can also log in directly to the PA-E if they are referenced and have rights granted by the Issuer on the PA-E. In particular, they must have access to the life cycle statuses to ensure that the invoice is approved. This may be the case for an insurer who pays the SELLER directly for the portion that concerns them (the total amount with VAT minus VAT and any deductible).

Obligations of PA-E and PD-R:

- **Know how to process the minimum base formats and profiles.**

Obligations of the SELLER:

- **Organize interaction with the third-party PAYER, either by referencing them on their PA-E as having delegation to access invoices for which the SELLER wishes to request payment by the third-party PAYER, or by organizing within their OD/SC (Compatible Solution) or its information system the necessary interconnections for payment requests and payment information returns in order to be able to create the " Payment Received" status where applicable, or by processing this Payment receipt with the third-party PAYER by any other means, integrating its obligation to issue the "Payment Received" status.**

Optional PA-R functionality:

- **Offer a service that allows third parties to be referenced for its "SELLER" customers, giving them access through various channels (portal, standard API, EDI), combined with a delegation to open access to invoices that must be paid by a third-party PAYER at the request of the SELLER, and to their life cycle.**

3.2.6 Case No. 5: Expenses paid by employees with invoices in the company's name

This management case covers expenses advanced by an employee in the course of their professional activity **and for which an invoice in the company's name has been issued**. In this case, the employee has advanced the expenses and the company reimburses them.

This case is only valid if the invoice paid by the employee is made out in the company's name and is therefore subject to electronic invoicing.

In practice, **the employee provides the electronic invoicing address where their company wishes to receive these business expense invoices**, as well as their company's SIREN number (normally the beginning of the address in the form SIREN_XXX or just SIREN). **A dedicated address for this type of invoice, for example SIREN_EMPLOYEEEXPENSES**, may be an option, especially if the company has many employee expenses to manage. The employee also provides the SELLER with information to be included in the invoice that will enable their company to identify them or link them to their receipt (receipt number, employee ID number, last 6 digits of the credit card used for payment, etc.).

As the invoice has already been paid, the Amount already paid (BT-113) is equal to the Total amount with VAT (BT-112) and the Net amount payable (BT-115) is equal to 0.

The employee is then considered a third-party payer. It is possible to enter the employee's name, or preferably an ID or employee number to avoid naming individuals on invoices (GDPR):

- When using the EXTENDED-CTC-FR profile, in the EXT-FR-FE-43 field (company name of the third-party PAYER) located in the "INVOICE PAYER" block (EXT-FR-FE-BG-02).
- When using the EN16931 profile, it is possible to use :
 - ✓ Either BT-18 data (invoiced item) with the Item code (BT-18-1) equal to AHK (payer reference),
 - ✓ Or an attribute (BT-161) with the Item attribute name (BT-160) equal to "MATRICULE"
- In the case of payment by bank card:
 - ✓ A payment means code (BT-81) equal to 48 (or 54 or 55) must be used.
 - ✓ The masked card number used (only a maximum of the first 6 digits and the last 4 digits may be provided) can be provided in BT-87.
 - ✓ The cardholder's name may also be specified in BT-88.

The SELLER may provide the employee with a legible copy of the invoice to enable them to justify their reimbursement.

Figure14: Expenses paid by an employee, invoice in the name of the company

Obligations of PA-E and PD-R:

- **Know how to process the minimum base formats and profiles.**

3.2.7 Case No. 6: Expenses paid by employees without an invoice addressed to the company (simple receipt or invoice made out to the employee's name and address)

The other management case corresponds to the case where the SELLER provides either an invoice or a receipt to the Employee who pays, and in their name.

This sale is then made between the SELLER, who is subject to tax, and the employee, who is a private individual not subject to tax. It is not subject to the electronic invoicing obligation within the meaning of Article 289 bis of the CGI, but to the e-reporting obligation for the SELLER.

The SELLER must therefore declare this sale in its B2C e-reporting, and therefore in its daily total for the day in flow 10.3, then, if VAT is due upon receipt of payment, in flow 10.4.

The employee may send a copy of the invoice to their employer to request a refund if the purchase is justified. The deductibility of VAT for the BUYER must be specified, as the BUYER does not have an invoice addressed directly to them, which is normally mandatory for a sale between VAT-registered parties in France.

The Employee or BUYER may nevertheless request a B2B electronic invoice at a later date, which the SELLER can provide with a Business Process Type "Cadre de Facturation" (BT-23) type 7 (S7, B7), which means for the tax authorities "VAT already collected as part of e-reporting, but which may be deductible for the BUYER"; see use case 30.

Figure15: Expenses paid by an employee, invoice in the employee's name

Obligations of the PA-E:

- **Transmit the e-reporting flow based on the information provided by the SELLER.**

3.2.8 Case No. 7: Invoice following a purchase paid for with a corporate card (purchasing card)

This case corresponds to purchases made by employees of the BUYER using a corporate card, generally used for all travel expenses, hotel rooms, train tickets, etc.

The SELLER is paid through the use of the corporate card. They send an invoice that has already been paid to the BUYER. The BUYER receives a monthly statement of payments for all purchases made by their employee from various SELLERS, which they pay to the corporate card operator. However, they may refuse certain purchases. In this case, the SELLER enters into a dispute or refusal management process.

With regard to invoices, the operation of corporate cards is the same as in case no. 2: invoice already paid by the BUYER, except that there is no third-party PAYER in this case (the corporate card being a means of payment for the BUYER).

The specific characteristics of the data and associated management rules are therefore as follows:

- Billing framework ("Cadre de Facturation") "Submission of an invoice already paid" (B2/S2/M2) or standard "Cadre de Facturation" B1/S1/M1;
- As payment is made by credit card, the payment transaction information must be provided: BT-87: last 4 to 6 digits of the card, and potentially (optional) the cardholder's name in BT-88.
- Amount paid (BT-113) equal to the total amount with VAT of the invoice (BT-112);
- Therefore, the Amount to be paid (BT-115) is equal to 0;
- The Due date (BT-9), if present, is equal to the invoice payment date (prior to or equal to the invoice date).

- If VAT is payable on payment receipt (service invoice ("Cadre de Facturation" S2 or S1) for which the SELLER has not opted for debits, i.e. with BT-8 absent or present and meaning "on payment receipt" (72 in UN/CEFACT CII and 432 in UBL)). The SELLER must send a "Payment Received" life cycle status (via a Life cycle 6 flow) to its PA-E so that it can be sent to the PPF and the BUYER's PA-R. This status MAY be sent at the same time as the invoice is issued and MUST be sent during the e-reporting period for payment data.

The steps in case no. 7, illustrated in the diagram below, are as follows:

Step	Name of step	Responsible party	Description
0	Purchase	BUYER	An employee of the BUYER purchases a product/trip from the SELLER using a purchase card or corporate card.
2b	Payment for the purchase	SELLER	The SELLER transmits the payment information to the Card Manager to execute the payment.
5a	Payment for the purchase	CARD CARD	The CARD MANAGER pays the SELLER on behalf of the BUYER.
6a	Receipt of payment	SELLER	The SELLER receives the purchase amount.
1	Creation of the invoice	SELLER	The SELLER creates the invoice (flow 2) via their information system. They can entrust its creation to an OD/SC (Compatible Solution) or to their PA-E. They send it to their PA-E for processing. This is an invoice that has already been paid.
2a	Transmission of flow 1, the invoice (flow 2), and the related statuses	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and for the existence of an active electronic invoicing address for the recipient, it MUST send the data required by the Administration (flow 1) to the CdD PPF. It MUST also send the invoice (flow 2 or flow 3) to the PA-R of the BUYER. It must send the status "Submitted" to the CdD PPF.
3	Receipt of the invoice	PA-R	The BUYER's platform (PA-R) receives the invoice (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Payment Received" then "Made Available") and makes the invoice available to the BUYER for processing.
6b	Issuance of "Payment Received" status	SELLER / PA-E	If the VAT on the invoice is payable upon receipt, the SELLER creates the "Received" status and transmits it to the CdD PPF via its PA-E. The PA-E also transmits the "Received" status to the PA-R for the attention of the BUYER.
7	Receipt of "Payment Received" status by the CdD-PPF	CdD PPF	The PPF Data Concentrator (CdD PPF) receives the "Payment Received" status.
4a	Transmission of the transaction statement	CARD MANAGER CARD	The CARD MANAGER transmits the transaction statement to the BUYER (excluding exchanges between PAs).
4b	Reconciliation between the statement and the invoice	BUYER	The BUYER reconciles the invoices received from SELLERS with the transaction statement (excluding PA scope).
4c	Settlement of the transaction statement	BUYER	The BUYER settles the transaction statement, partially, if necessary, in the event of a dispute over certain invoices.
4d	Processing of the invoice and updating of its status prior to payment	BUYER	The BUYER processes the invoice and sets the corresponding processing statuses in its PA-R ("Rejected," "Accepted," "In dispute," "Approved," "Partially approved," "Suspended," etc.) for transmission to the SELLER via its PA-E.

4e	Receipt of invoice statuses	SELLER	The SELLER receives the invoice statuses following the processing of the invoice by the BUYER in accordance with the terms of the life cycle.
----	-----------------------------	--------	---

Figure16: Invoice following a purchase with a corporate card

In the event of a refusal, dispute, or partial approval of the invoice, the resolution is as described in Chapter 2. Once the payment is canceled, the SELLER MUST set a negative "Payment Received" status to cancel the initial status.

Obligations of PA-E and PA-R:

- Know how to process the minimum base formats and profiles.

Obligations of the SELLER:

- Transmit the "Payment Received" status as soon as it receives payment from the CARD MANAGER, within its e-reporting period (before the 10th of the following month for companies under the normal regime).
- In the event of a payment cancellation, transmit a "Payment Received" cancellation status with negative amounts.

Optional PA-E feature:

- Propose the creation of a "Payment Received" life cycle message on behalf of the SELLER in the event of an invoice that has already been paid, based on the invoice data (BT-8 value, "Cadre de Facturation" S2/B2/M2, BT-9 for the date, VAT footer, etc.).

3.2.9 Cases 8 to 10: Invoices payable to a third party (including factoring, cash pooling)

3.2.9.1 Cash pooling

If a SELLER is part of a group that has implemented cash pooling, they may designate a Third Party Payee for the payment of their sales invoices (the entity in charge of cash pooling) and provide their bank details as follows:

- Identification of the PAYEE in BG-10:
 - ✓ BT-59: company name of the third-party PAYEE

- ✓ BT-60: Additional identifier of the third-party PAYEE Y, optional
- ✓ BT-61: Legal identifier (SIREN) of the third-party PAYEE, optional,
- ✓ And in the EXTENDED-CTC-FR profile, it is possible to add, optionally:
 - EXT-FR-FE-26: the role code (mainly intended to identify a third-party PAYEE of the factoring company type)
 - EXT-FR-FE-27: VAT ID of the factoring company
 - EXT-FR-FE-29 and EXT-FR-FE-30: electronic address and its identification scheme, which may be useful for replicating the invoice and statuses through the network exchange system (PEPPOL interoperability, for example).
 - EXT-FR-FE-31, which is a data group: postal address of the PAYEE.
 - EXT-FR-FE-39, which is a data group: contact details of the PAYEE.
- Bank details to be paid in BG-17 (Transfer Information):
 - ✓ BT-84: IBAN to be paid (i.e., that of the third-party PAYEE)
 - ✓ BT-85: name of the payment account holder
 - ✓ BT-86: BIC

3.2.9.2 Focus on factoring management

Factoring is a credit transaction within the meaning of Article L. 313-1 of the Monetary and Financial Code. This regulated financial service, provided by specialized credit institutions or finance companies, is based on the purchase of commercial receivables. The legal basis for the transfer of receivables from the supplier to the Factor is contractual subrogation as provided for in the Civil Code, the assignment of professional receivables known as "Daily assignment" as provided for in the Monetary and Financial Code, or the assignment of receivables as provided for in the Civil Code. Regardless of the basis, the Factor becomes the owner of the assigned receivable.

When an invoice is subrogated, it is assigned to a factoring company, hereinafter referred to as the "Factor," which may result in the BUYER's payment being made directly to the Factor (in general cases), or to a specific bank account held by the SELLER with the Factor (in cases of confidential factoring, for example).

Depending on the offer, this assignment may be made for a set of invoices (e.g., for a given customer) or "on demand" per invoice.

The general principle is then to allow a third-party Factor access to each subrogated or assigned invoice and its life cycle only for invoices on which the Factor is identified as a third-party Factor, either directly on the invoice (case no. 8), or through life cycle messages if the subrogation takes place after the invoice has been issued (case no. 10).

Several cases may arise:

- "Traditional" factoring: the invoice is a "factored invoice" (codes 393, 501 in BT-3), or "factored credit note" (codes 396, 502 in BT-3) or "factored corrected invoice" (codes 472, 473), bearing in mind that the second codes (501, 502, 473) correspond to cases of self-billing in addition to the "factored" nature. The Factor is identified as such in the invoice (in a "PAYEE" block, BG-10: Payment payee).
- Factoring after the invoice has been sent: in this case, the Factor is not identified in the invoice, which can no longer be modified (otherwise, a credit note and a new invoice or a corrected invoice would have to be issued). The BUYER must therefore be informed of the change of ownership of the invoice and the change of payment destination.
- Confidential factoring: whether done before or after the invoice is issued, this type of offer means that the BUYER is not informed of the subrogation or assignment of the invoice. In general, the SELLER designates a bank account opened with its factoring company to which the BUYER makes the payment. This account is usually pre-configured by the BUYER, like any SELLER's bank account. The SELLER may indicate to its BUYER during processing that it wishes to be paid into another bank account.
- Reverse factoring: this is an offer developed for large buyers and proposed to their SELLER suppliers, with proximity to the BUYER allowing access to invoice validation statuses, which makes the receivable more "certain."
- Change of Factoring Company: it may happen that the Factoring Company changes during the life of the invoice. In this case, a plan should be put in place whereby the invoice is transferred back to the SELLER and then transferred again to a new Factoring Company.

That being said, it is necessary to describe how the necessary exchanges between the SELLER and BUYER of invoices and the life cycle should be organized to meet the above requirements.

Furthermore, as the Factoring Companies are the owners of the invoices, they wish to have access to the life cycle statuses, particularly those relating to processing ("Dispute", "Approved", "Payment Sent", "Payment Received"), but also, in particular, those that result in the cancellation of the pre-filled VAT, which almost always results in the cancellation of the invoice through an INTERNAL CREDIT NOTE.

This is primarily a matter for the contractual relationship between the factoring company and the SELLER.

However, Accredited Platforms («Plateformes Agréées») may offer additional optional features for sharing invoices and life cycle information with the factoring company, once it has been identified as the new owner of the invoice. This requires, at a minimum, that the factoring company be listed with the PA-E as being able to act on a SELLER's invoices, by delegation of rights subject to the transfer of the invoice to the factoring company.

The factoring company can then connect to the PA-E directly, via an OD/SC (Compatible Solution), or through its own Accredited Platforms («Plateformes Agréées»). In this case, however, the PA-E must also provide for the replication of invoices and statuses for the attention of the Factor, i.e., the transmission of invoices to the Factor's platform as soon as they are factored, as well as the various life cycle messages exchanged with the BUYER through the SELLER's PA-E.

On the other hand, when invoices are actually paid to the Factor by the BUYER, the Factor MUST transmit the information to the SELLER, either by sending it to them or giving them access to it by any means, or through their e-invoicing platform, so that the latter can set the status to "Paid" when necessary.

3.2.9.3 Case No. 8: Invoice payable to a third party determined at the time of invoicing (factoring, cash pooling)

In case no. 8, the invoice must be paid to a third party specified at the time of invoicing. This may be an entity designated by the SELLER, responsible for cash pooling. In this case, it is sufficient to designate this entity in the invoice in the Payee block (BG-10).

It may also be a third-party factoring company, and the rest of this case study will focus on this scenario. It is identified on the invoice in the "PAYEE" block (BG-10). Using the EXTENDED-CTC-FR profile, it is possible to qualify the type of Payee using the "role code": EXT-FR-FE-26 with the value "DL" (role code from the UNTDID 3035 list for a "Factor").

If the SELLER receives refinancing for their invoice, this does not constitute a payment receipt because the BUYER has not paid this invoice. It is therefore only when the BUYER pays the invoice to the Factor that the invoice is deemed "Payment Received". The Factor must therefore inform the SELLER so that the latter can set the status to "Payment Received" if VAT is due upon payment receipt.

It may also be possible for the Factor to directly transmit the "Payment Received" status to the PPF's CdD on behalf of the SELLER. However, it must already use an Accredited Platform to do so, and also inform the SELLER (for its lettering) and potentially the BUYER. If the factoring company is prepared to prepare the "Payment Received" status on behalf of its client, the SELLER, best practice is for the factoring company to transmit it to the SELLER, either directly or to its PA-E on its behalf (and therefore with the delegation rights that allow it). The SELLER can then manage it and send it as they would any other invoice. Otherwise, the Factoring Company will continue to send or make the payment receipt information available to the SELLER outside the system.

NOTE: In general, factoring companies consider that they should not take the place of their SELLER clients in their tax obligations. Furthermore, in order to remain within a simple regulatory framework controlled by the SELLER, it is preferable for the SELLER to remain in control of its exchanges of information with the tax authorities through its PA-E. Consequently, allowing a third party to transmit "Payment Received" statuses to the CdD PPF independently of the SELLER is not considered good practice.

In this case no. 8, the following data must be included in the invoice (except in the case of confidential factoring, where the invoice remains a standard commercial invoice, without a factoring code and without the name of the Factor):

- Typecode 393 (or 501 in the case of self-billing) in BT-3.
- The identification of the Factor in BG-10 (PAYEE):
 - ✓ BT-59: company name of the Factor
 - ✓ BT-60: Additional identifier of the Factor, optional, but may be required by a Factor to identify it with certainty (e.g., with an LEI)

- ✓ BT-61: Legal identifier (SIREN) of the Factor, optional, but may be required by a Factor to identify it with certainty
- ✓ And in the EXTENDED-CTC-FR profile, it is possible to add, optionally:
 - EXT-FR-FE-26: the role code, with the value "DL" for a Factor
 - EXT-FR-FE-27: VAT identifier of the factoring company
 - EXT-FR-FE-29 and EXT-FR-FE-30: electronic address and its identification scheme, which may be useful for replicating the invoice and statuses through the network exchange system (PEPPOL interoperability, for example).
 - EXT-FR-FE-31, which is a data group: postal address of the PAYEE.
 - EXT-FR-FE-39, which is a data group: contact details of the PAYEE.
- Bank details for payment in BG-17 (Transfer Information):
 - ✓ BT-84: IBAN to be paid (i.e., that of the factoring company)
 - ✓ BT-85: name of the payment account holder
 - ✓ BT-86: BIC
- A reference to subrogation/assignment, in BG-1 (Note):
 - ✓ BT-21 (Subject code): ACC.
 - ✓ BT-22 (Content): text of the subrogation.

The description below complies with the principle of not exporting complexity to counterparties. The BUYER treats the invoice and statuses like any other invoice. It is the SELLER, and where applicable its PA-E, that acts as the hub for sharing or replication with the factoring company.

The replication of invoices and statuses between the SELLER and the FACTOR is a matter for their commercial relationship. In particular, the PA-E may offer invoice and status sharing/replication services to a third-party FACTOR.

The steps in case no. 8, illustrated in the diagram below, are as follows:

Step	Step name	Responsible party	Description
1	Creation of the invoice with mention of factoring	SELLER	The SELLER creates the invoice (flow 2) via its information system. It may entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing. As the factoring company is known when the invoice is created, it is identified as the "PAYEE" in block BG-10. The payment information entered in block BG-17 "TRANSFER" corresponds to its bank details. The invoice type in BT-3 must be set to 393 (factored invoice) or 501 (self-factored invoice).
2a	Transmission of flow 1 data	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, it MUST transmit the data required by the Administration (flow 1) to the CdD PPF. It MUST also transmit the invoice (flow 2 or flow 3) to the PA-R of the BUYER. It must send the status "Submitted" to the CdD PPF.
2b	Transmission/sharing of the invoice with the factoring company	SELLER / PA-E OD/SC (Compatible Solution)/Approved Factoring Company Platform	The SELLER shares/transmits the invoice to the factoring company. Optional additional PA-E feature: organize sharing/replication.

Step	Step name	Responsible party	Description
3	Receipt of the invoice	PA-R	The BUYER's platform (PA-R) receives the invoice (flow 2 or flow 3), performs regulatory checks, creates transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER for processing.
4a 4b	Processing of the invoice and updating of statuses prior to payment	BUYER	The BUYER processes the invoice and sets the corresponding processing statuses in its PA-R ("Rejected," "Accepted," "In dispute," "Approved," "Partially approved," "Suspended," etc.) for transmission to the SELLER via its PA-E.
4c	Transmission/sharing of life cycle statuses	SELLER / PA-E OD/SC (Compatible Solution)/Approved Factoring Platform	The SELLER shares/transmits the life cycle statuses to the Factoring Company. <u>Optional additional PA-E feature:</u> organize sharing/replication.
5a 5b	Payment of the invoice to the factoring company and transmission of the "Payment Transmitted" status to the SELLER.	BUYER / PA-R	The BUYER pays the invoice to the Factor (PAYEE). They can send a "Payment Transmitted" status to the SELLER via the PA-R (recommended).
5c	Receipt of "Payment Transmitted" status	SELLER / PA-E	The SELLER receives the "Payment Transmitted" status from their PA-E.
5d	Transmission/sharing of "Payment Transmitted" status	SELLER / PA-E OD/SC (Compatible Solution)/Approved Factoring Platform	The SELLER shares/transmits the "Payment Transmitted" status to the Factoring Company. <u>Optional additional PA-E feature:</u> organize sharing/replication.
6a	Invoice payment receipt and information from the SELLER	FACTORING COMPANY	The factoring company receives payment for the invoice (outside the circuit). It informs the SELLER of this payment receipt, either by sending it to them or by giving them access to it by any means. <u>Optional additional feature of PA-E:</u> organize the ability to receive a "Payment Received" status prepared and sent by the Factoring Company to the SELLER.
6b	Receipt of payment receipt information	SELLER	The SELLER receives or has access to information about the payment receipt for their invoice by the Payee (the Factoring Company).
6c	Issuance of "Payment Received" status	SELLER	If the VAT on the invoice is payable upon payment receipt, the SELLER creates the "Payment Received" status and transmits it to the CdD PPF via its PA-E. The PA-E also transmits the "Payment Received" status to the PA-R for the attention of the BUYER.
6d	Receipt of "Paid" status by the BUYER	BUYER PA-R	The BUYER receives the "Received" status.
7	Receipt of "Paid" status by the PPF CdD	PPF Data Concentrator	The PPF Data Concentrator (CdD PPF) receives the "Paid" status.

Figure17: Invoice payable to a third party determined at the time of invoicing

Obligations of PA-E and PA-R:

- Know how to process minimum base formats and profiles.

SELLER obligations:

- Create the invoice with fields identifying the factoring company, its bank details, and the subrogation clause.
- Replicate/share the invoice and life cycle statuses with the factoring company.

Obligations of the factoring company:

- Allow the SELLER to access payment receipt information enabling them to create "Payment Received" statuses on their factored invoices.

Additional optional PA-E features:

- Offer an additional feature for managing third-party factoring companies identified on the PA-E and for which invoice and status viewing rights are granted.
- Offer an additional feature for initiating subrogation/transfer of invoices with a referenced factoring company.
- Implement an additional feature for replicating invoices and statuses to the factoring company, for example using the PEPPOL network, with the factoring company using a dedicated address for receiving replicated invoices and statuses for its business. The factoring company's access point MUST be based in the EU (and this is the case if it is a PA). Transmission can also be done through the Standard Data Exchange API.
- For Factoring Companies that wish to offer to prepare the "Payment Received" status on behalf of the SELLER and transmit it to its PA-E, set up an additional feature for receiving invoice "Payment Received" statuses transmitted directly by the Factoring Company on behalf of the SELLER, and prepare the "Payment Received" status from this status so that the SELLER can send it to the CdD PPF and the BUYER.

3.2.9.4 Case No. 9: Invoice payable to a third party known at the time of invoicing, who also manages the order/receipt, or even invoicing (Distributor / Depositary)

This case is handled in the same way as case no. 8. The different roles (order, receipt, invoicing) can be added to the invoice flow (flow 2) as needed. They have no impact on the data to be sent to the administration (flow 1).

However, this is not factoring, so there is no need to mention subrogation in the invoice.

Furthermore, it is not necessarily necessary to replicate invoices and statuses to the third-party payee (steps 2b and 4c). The only information that needs to be retained is the information provided by the payee to the seller regarding the actual payment receipt for an invoice.

You can refer to the diagram in case no. 8, "Invoice payable to a third party designated at the time of invoicing (factoring, cash pooling)."

3.2.9.5 Case No. 10: Invoice payable to a third-party payee unknown at the time the invoice was created, in particular a factoring company (case of subrogation)

The invoice is payable to a third party who is unknown at the time the invoice is created (for example, a factoring company for a subrogation made after the invoice has been sent). A contract must be drawn up between the SELLER and the third-party Payee before the latter can be declared to the BUYER as a potential payee. The payment of the invoice is received by the third-party payee or the SELLER in the case of confidential factoring. The SELLER remains responsible for updating the "Payment Received" status and transmitting it to the PPF's CdD.

The steps in case no. 10, illustrated in the diagram below, are as follows:

Step	Name of step	Responsible party	Description
1	Creation of the invoice for the BUYER	SELLER	The SELLER creates the invoice (flow 2) via its information system. It may entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing.
2a	Transmission of flow 1 data	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, it MUST transmit the data required by the Administration (flow 1) to the CdD PPF. It MUST also transmit the invoice (flow 2 or flow 3) to the PA-R of the BUYER. It must send the status "Submitted" to the CdD PPF.
3	Receipt of the invoice	PA-R	The BUYER's platform (PA-R) receives the invoice (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER for processing.
4a 4b	Processing of the invoice and updating of statuses prior to payment	BUYER	The BUYER processes the invoice and sets the corresponding processing statuses in its PA-R (statuses "Rejected," "Accepted," "In dispute," "Approved," "Partially approved," "Suspended," etc.), for transmission to the SELLER via its PA-E.
4c	The SELLER designates a new Payee to the BUYER. If applicable, it sets the status to "Factored."	SELLER	The SELLER decides to change the Payee. It informs the BUYER of this via a life cycle status, which, depending on the case, may also signify the subrogation/assignment of the invoice. In the case of traditional factoring, this message indicates a "Factored" status, which is a status of the invoice and does not change the current transmission or processing status.
4d	Receipt by the BUYER of the change of Payee status	BUYER	The BUYER receives the change of payee status and, where applicable, the "Factored" status.

Step	Name of step	Responsible party	Description
4e	Transmission/sharing of the invoice and life cycle history	SELLER / PA-E OD/ SC (Compatible Solution) / Approved Factoring Platform	The SELLER shares/transmits the invoice and life cycle statuses to the Factoring Company. All life cycle statuses will also be shared/transmitted to the factoring company. <u>Optional additional PA-E feature:</u> organize sharing/replication.
5a 5b	Payment of the invoice to the Factoring Company and transmission of the "Payment Transmitted" status to the SELLER.	BUYER / PA-R	The BUYER pays the invoice to the PAYEE (Factoring Company) or to the SELLER in the case of Confidential Factoring (in practice, to the account indicated on the invoice or modified through a "Change of Payable Account" life cycle status). The BUYER may transmit a "Payment Transmitted" status to the SELLER via the PA-R (recommended).
5c	Receipt of "Payment Transmitted" status	SELLER / PA-E	The SELLER receives the "Payment Transmitted" status from their PA-E.
5d	Transmission/sharing of "Payment Transmitted" status	SELLER / PA-E OD/SC (Compatible Solution) / Approved Factoring Platform	The SELLER shares/transmits the "Payment Transmitted" status to the Factoring Company. Optional additional PA-E feature: organize sharing/replication.
6a	Invoice payment receipt and information for the SELLER	FACTOR	The Factoring Company receives payment for the invoice (off-circuit). It informs the SELLER of this payment receipt, either by sending it to them or by giving them access to it by any means. <u>Optional additional feature of PA-E:</u> organize the ability to receive a "Received" status prepared and transmitted by the Factoring Company to the SELLER.
6b	Receipt of payment receipt information	SELLER	The SELLER receives or has access to information about the payment receipt for their invoice by the Payee (the Factoring Company).
6c	Issuance of "Payment Received" status	SELLER	If the VAT on the invoice is payable upon payment receipt, the SELLER creates the "Payment Received" status and transmits it to the CdD PPF via its PA-E. The PA-E also transmits the "Payment Received" status to the PA-R for the attention of the BUYER.
6d	Receipt of "Payment Received" status by the BUYER	BUYER PA-R	The BUYER receives the "Received" status.
7	Receipt of "Payment Received" status by the PPF CdD	PPF Data Concentrator	The PPF Data Concentrator (CdD PPF) receives the "Paid" status.

Figure18: Invoice payable to a third party unknown at the time of invoicing

Management of different factoring cases through the status message between SELLER and BUYER:

- Traditional factoring:** the life cycle status sent to the BUYER (step 4c) uses the "Factored" status (*status code 225*) and indicates the new bank details:
 - ✓ The new Payee is designated in the "Recipient" block of the CDAR status message (MDG-41):
 - MDT-155: identifier of the new Payee: SIREN number, and/or other identifier (MDT-156 gives the identification scheme code).
 - MDT-158: role code: "DL" for a factoring company.
 - MDT-178: e-mail address of the Factor.
 - ✓ The new bank details are provided in block MDG-43 (Data to be reported) of the status detail block (MDG-37), with one occurrence per piece of information transmitted (BT-84, BT-85, BT-86):
 - MDT-207 = CBB (Payee Bank Details to be modified)
 - MDT-206: indicates the identifier in the EN16931 semantic model of the invoice data to be taken into account, i.e.: "BT-84" for the IBAN; "BT-85" for the account holder's name; "BT-86" for the BIC)
 - MDT-214: new data to be taken into account (IBAN, account holder name, BIC respectively).
 - ✓ "Invoiced" status:
 - MDT-77: 23 (processing phase)
 - MDT-88: 5 (means "Information only")
 - MDT-105 (Processing status code): *code 225, meaning "Factored"*
 - MDT-106 (Processing status description): "Factored"
 - ✓ Subrogation/assignment notice: in the MDG-39 status note:
 - MDT-126 (Content): Subrogation/assignment notice
 - MDT-127 (Subject code): ACC
- Confidential factoring:** in this case, it may be necessary to share a status between the Factor and the SELLER only, without informing the BUYER, to indicate this change in the status of the invoice through a life cycle status of "Factored Confidential" (*code 226*) that is NOT TO BE SENT to the BUYER (and therefore not to the PA-R). Next, it may be necessary to request that the invoice be paid to an account other than the one initially specified on the invoice. To do this, a life cycle status message is sent to the BUYER, indicating only a change in IBAN since the Payee remains the same (the SELLER):

- ✓ The new bank details are provided in block MDG-43 (Data to be reported) of the status detail block (MDG-37), with one occurrence per piece of information:
 - MDT-207 = CBB (Payee Bank Details to be changed)
 - MDT-206: indicates the invoice data to be taken into account (BT-84: IBAN; BT-85: Account Name, BT-86: BIC)
 - MDT-214: new data to be taken into account (IBAN, Name, BIC, respectively).
- ✓ Status: a new status must also be used here:
 - MDT-77: 23 (processing phase)
 - MDT-88: 5 (means "Information only")
 - MDT-105 (Processing status code): *code 227* meaning "Change of account payable"
 - MDT-106 (Processing status description): "Change of Payable Account"
- **Change of factoring company:** this is the same message as the one announcing that the invoice has been "factored," but with the new factoring company.
- **Factoring Cancellation:** same message, but with the status "Not Factored" (*code 228*) and the bank account changed to that of the SELLER. If the previous status is "Factored Confidential," the "Not Factored" status MUST NOT be sent to the BUYER's PA-R (and therefore not to the BUYER).

Management of status messages between the SELLER and the FACTOR (optional): in order to inform the FACTOR of a new invoice submitted for factoring, the CDR life cycle status message can be used as follows:

- Issuer: MDG-16: the SELLER
- Sender: MDG-9: only role code WK (if issued by the PA-E)
- Recipient: MDG-23: the FACTOR
- Status type: MDT-77: 23 (processing phase)
- Standard status code: MDT-88: 5 (Information only)
- Invoice identification:
 - ✓ MDT-87: Invoice number
 - ✓ MDT-91: invoice type code (e.g., 380)
 - ✓ MDG-40: SELLER
- Attachment: MDT-96: invoice encoded in base64
- Code and text Reform status: MDT-105 / MDT-106:
 - ✓ 225 ("Invoiced")
 - ✓ 226 ("Confidential invoiced")
 - ✓ 228 ("Not invoiced"), for cases where invoicing has ended.
- Status history: use the status detail block (MDG-37), repeatable, with the information relating to the status code and date entered below:
 - ✓ MDT-110: status date and time
 - ✓ MDT-111: Standard status code (MDT-88 in the status message exchanged and replicated here)
 - ✓ MDT-115: reform status code (2xx, from 200 to 228)
 - ✓ MDT-116: status description
 - ✓ And all the information contained in the status details exchanged and replicated here.

Obligations of PA-E and PA-R:

- **Know how to process the minimum base formats and profiles (invoice and CDAR).**

SELLER obligations:

- **Create a life cycle status message for the BUYER announcing a change of payee or account payable (if necessary, in the case of confidential factoring) and, where applicable, a subrogation/assignment of the invoice.**

- **Inform the FACTOR of the subrogation/assignment of the invoice by sending them the invoice and the life cycle history.**
- **Replicate/share the invoice and life cycle statuses with the FACTOR.**

OBLIGATIONS OF THE BUYER:

- **Receive the payee change message and process it.**

Obligations of the factoring company:

- **Allow the SELLER to access the payment receipt information for their invoices, enabling them to create "Payment Received" statuses for their factored invoices.**

Additional optional features of the PA-E:

- **Offer an additional feature for managing third-party factoring companies identified on the PA-E and for which invoice and status viewing rights are granted.**
- **Offer an additional feature for initiating subrogation/transfer of invoices with a referenced FACTORING COMPANY.**
- **Set up a service for replicating invoices and statuses to the FACTORING COMPANY, for example using the PEPPOL network, with the factoring company using a dedicated address for receiving replicated invoices and statuses. The FACTORING COMPANY's access point MUST be based in the EU (and this is the case if it is a PA). Transmission can also be done through the Standard Data Exchange API, which can be used by the Factoring Company once its rights and delegation have been configured on the PA-E.**
- **For factoring companies that wish to offer to prepare " Payment Received" statuses on behalf of the SELLER and transmit them to its PA-E, set up an additional feature for receiving invoice payment receipt statuses transmitted by the FACTORING COMPANY on behalf of the SELLER, and use this status to prepare the " Payment Received" status so that the SELLER can send it to the PPF's CdD and to the BUYER.**

3.2.10 Case No. 11: Invoice to be received and processed by a third party on behalf of the BUYER

This management case covers the business case of a third party (e.g., a property management company or a shared services center within a group) that manages a company's invoices. The invoice is made out to the taxable buyer (whose transactions are subject to electronic invoicing), but the third-party manager wishes to receive them for processing.

The most natural way to manage this situation is through the choice of invoicing electronic addresses. All the BUYER needs to do is create an address in the form SIRENacheteur_MONCSP or SIRENacheteur_ADMINBIENS, then choose the same Accredited Platform as its third-party manager so that the latter can access the BUYER's invoices for processing on its behalf.

These addresses can be designated directly by the Third-Party Manager, provided that they undertake to receive a mandate from their BUYER clients to also manage the creation of the invoicing electronic address that will be dedicated to their third-party management activities.

A template for the mandate to designate electronic addresses for the receipt of invoices is provided by the FNFE-MPE and is available on its website (www.fnfe-mpe.org).

NOTE: The other possible option, initially planned, was to allow the third party to be named in invoices with the EXTENDED-CTC-FR profile in the "ADDRESSEE" block, and, if the third party is itself subject to VAT in France (and therefore listed in the PPF Directory («Annuaire»)), the PA-E would have to send the invoice to the "ADDRESSEE" instead of the BUYER, who would no longer receive their invoices. This option goes against the simple principle that is now widely in place (particularly in the PEPPOL network), which states that the electronic invoice is sent to the electronic address of the BUYER as entered in BT-49 (or the SELLER in BT-34 for self-billed invoices). It would also require the PA-R chosen by the Third-Party Manager to clearly distinguish between invoices received on behalf of the

Manager and those received on behalf of each of the Manager's clients managed by the latter. It contravened the principle that all electronic invoicing addresses for receiving invoices from a taxable entity are listed in the directory and can be consulted by everyone. Finally, it required all SELLERS of the Manager's clients to use the EXTENDED-CTC-FR profile (since "Addressee" is not available in the EN16931 profile).

This is why this second option is excluded. However, the "Addressee" field can be used to name a third party responsible for processing the invoice, facilitating the management of delegations and rights on the PA-R.

Ultimately, in both cases, invoices arrive at the PA-R chosen by the Third-Party Manager, in which the BUYER is listed as BUYER and has access to their invoices, either directly through the PA-R (with rights of action limited to what is not entrusted to the Third-Party Manager), or because the Manager transmits the invoices and the life cycle to the BUYER by its own means.

The Third Party may also be authorized to pay on behalf of the BUYER. In this case, the PA-R can organize delegation rights to allow the third party to set the status to "Payment Transmitted" on behalf of the BUYER. The PA-R can also make this possible if the third-party Manager is also listed on the invoice as a Third-Party PAYER (block EXT-FR-FE-BG-02), as described in case no. 3.

Finally, in semantic terms, the THIRD PARTY manager has a role much more similar to that of a BUYER'S AGENT.

The steps in case no. 11, illustrated in the diagram below, are as follows:

Step	Step name	Responsible actor	Description
1	Creation of the invoice for the BUYER	SELLER	Following a commercial transaction (order/delivery, service contract, spot purchase, etc.), the SELLER creates the invoice (flow 2) via its information system. It may entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing. They indicate the electronic invoicing address that their customer or manager has asked them to use, and use the appropriate profile.
2	Transmission of flow 1, the invoice (flow 2), and the related statuses	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, it MUST transmit the data required by the Administration (stream 1) to the CdD PPF. It MUST also transmit the invoice (stream 2 or stream 3) to the PA-R of the BUYER. It must send the status "Submitted" to the CdD PPF.
3	Receipt of the invoice	PA-R / Third party / BUYER	The Third Party and BUYER platform (PA-R) receives the invoice (flow 2 or flow 3), performs regulatory checks, creates transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER and Third Party for processing.
4a 4b	Processing of the invoice and updating of statuses prior to payment	Third party on behalf of the BUYER	Depending on the rights assigned to it, the THIRD PARTY processes the invoice on behalf of the BUYER and sets the corresponding processing statuses with the PA-R ("Rejected," "Accepted," "In dispute," "Approved," "Partially approved," "Suspended," etc.) for transmission to the SELLER through its PA-E.
4c	Receipt of invoice statuses	SELLER	The SELLER receives the invoice statuses following the processing of the invoice by the BUYER in accordance with the terms of the life cycle.

Step	Step name	Responsible actor	Description
4d	Sharing/transmission of the invoice and life cycle with the BUYER	THIRD PARTY	The THIRD PARTY shares the invoice and life cycle with the BUYER, either through PA-R or directly (for example, if it records the invoice directly in the BUYER's information system).
5a 5b	Payment of the invoice	BUYER or Third party on behalf of the BUYER	The invoice is paid either by the BUYER or by the Third Party on behalf of the BUYER. If the BUYER pays, they inform the Third Party so that the latter can create the "Payment Transmitted" status.
5c	Creation of the "Payment Transmitted" status	The Third Party, on behalf of the BUYER /PA-R	The Third Party creates the "Payment Transmitted" status and transmits it through its PA-R.
5d	Receipt of "Payment Transmitted" status	SELLER / PA-E	The SELLER receives the "Payment Transmitted" status from its PA-E.
6a	Payment receipt for the invoice	SELLER	The SELLER receives payment for the invoice (outside the circuit).
6b	Issuance of "Paid" status	SELLER / PA-E	If the VAT on the invoice is payable upon payment receipt, the SELLER creates the " Payment Received" status and transmits it to the CdD PPF via its PA-E. The PA-E also transmits the " Payment Received" status to the PA-R for the attention of the BUYER.
6c	Receipt of "Paid" status by the THIRD PARTY	Third party on behalf of the BUYER PA-R	The THIRD PARTY receives the " Payment Received" status on behalf of the BUYER.
6d	Information to the BUYER about payment receipt	THIRD PARTY	The Third Party shares the " Payment Received" status with the BUYER, either through PA-R or directly (for example, if it performs the lettering directly in the BUYER's Information System).
7	Receipt of " Payment Received" status by the CdD PPF	PPF Data Concentrator	The PPF Data Concentrator (CdD PPF) receives the " Payment Received" status.

Figure19: Invoice to be processed by a third-party manager other than the BUYER

Obligations of PA-E and PA-R:

- Know how to process the minimum base formats and profiles (invoice and CDAR).

SELLER obligations:

- If applicable, use the EXTENDED-CTC-EN profile and fill in "ADDRESSEE" (EXT-EN-FE-BG-04).

OBLIGATIONS OF THE BUYER:

- Ensure that the management of invoices is entrusted within a controlled delegation framework, for example through a management mandate or by ensuring shared access to invoices on a shared PA-R with the third party or parties.

Obligations of the THIRD PARTY:

- Send invoices and life cycle statuses to the BUYER, either by acting directly on their information system (in the case of a Shared Services Center, for example), or by organizing access to the PA-R or the replication of invoices and statuses to the BUYER (for example, using standard APIs).

Optional PA-R features:

- Offer a management service for third-party managers acting on behalf of BUYERS, allowing them to set up their BUYER clients as PA-R users with third-party delegation on the BUYER accounts for which they have a mandate. If necessary, certain actions may be open to the third party only if they are named in the invoice (for example, a third-party PAYER can only have access to the invoice and its life cycle if they are named in the invoice as a third-party PAYER).
- Set up a service for replicating/sharing invoices and life cycles with BUYERS whose invoices are in practice processed by a third-party manager.

3.2.11 Case No. 12: Transparent intermediary managing invoices for its principal BUYER

The transparent intermediary, within the meaning of VAT, acts as an intermediary between two parties in contract negotiations and the solicitation of suppliers or customers.

For VAT purposes, the transparent intermediary is deemed to be acting on behalf of and in the name of another person.

They appear as the principal's representative in their dealings with third-party contractors (BOI-TVA-CHAMP-10-10-40-40, § 20).

In practice, the principal may be the SELLER or the BUYER:

- If the transparent intermediary acts on behalf of the SELLER (acting as an intermediary "in the sale"), use case 19a (invoicing mandate) applies to the main invoice, i.e., the issuance of an invoice by a third party invoicing under an invoicing mandate. Case 17b (payment intermediary under an invoicing mandate, applicable in particular to purchases on marketplaces) also falls within the same context of transparent intermediary for the SELLER principal.
- If the transparent intermediary acts on behalf of the BUYER (intermediary "at the time of purchase"), use case No. 11 applies to the main invoice, which is detailed in case No. 12.

In fact, the invoicing scheme provided for in principle for transparent intermediaries involves at least two invoices:

- An invoice issued by the intermediary for its intermediation services (PS). Intermediary transactions for this type of intermediary are considered to be services independent of the service that is the subject of the intermediation itself (BOI-TVA-CHAMP-10-10-40-40, §40). Therefore, intermediary services are subject to their own VAT regime and must be invoiced.
- An invoice issued by the SELLER or on its behalf, made out to the BUYER.

When the main invoice and the intermediary invoice are issued between two taxable entities established in France, they fall within the scope of electronic invoicing and are transmitted between Accredited Platforms («Plateformes Agréées»).

In the diagram below, where the transparent intermediary acts on behalf of the BUYER, the intermediary invoice is a standard invoice issued by the transparent intermediary to the BUYER.

Invoices are sent to the transparent intermediary using the addressing mechanism, which requires the BUYER to dedicate an electronic address for receiving invoices for this type of purchase (e.g., SIRENACH_ACHATTR), which is managed by the PA-TR (Accredited Platform for Receipt by the Transparent Intermediary), generally chosen by the transparent intermediary and to which the transparent intermediary has access and delegated rights allowing it to access the invoices and life cycle received at the BUYER's dedicated electronic address.

The transparent intermediary may create the BUYER's electronic address for receiving invoices dedicated to this type of purchase and entrust it to the PA-TR of its choice, PROVIDED THAT IT HAS A MANDATE FROM THE BUYER TO DO SO, given that it has at least a management mandate to process the BUYER's purchase invoices on its behalf.

Then, the following two situations occur:

- The BUYER has access to the PA-TR, either directly from its information system or its OD/SC (Compatible Solution), or through its own Accredited Platform used for its other types of purchases. In this case, the PA-TR can organize the respective rights of the BUYER and the transparent intermediary to view invoices and their life cycles, to set statuses, and to create and share the necessary summary documents. This case is detailed in the diagram below.
- The BUYER does not have access to the PA-TR, and it is up to the transparent intermediary to deliver the necessary invoices and summary documents to them (as was the case before the reform was implemented).

The steps in case no. 12, illustrated in the diagram below, are as follows:

Step	Name of step	Responsible actor	Description
1	Creation of the invoice for the BUYER	SELLER	Following a commercial transaction (order/delivery, service contract, spot purchase, etc.), the SELLER creates the invoice (flow 2) via its information system. It may entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing. They indicate the electronic invoicing address that their customer or manager has asked them to use in accordance with paragraph 1.4 of this document, and use the appropriate profile.
2	Transmission of flow 1, the invoice (flow 2) and the related statuses	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, it MUST transmit the data required by the Administration (stream 1) to the CdD PPF. It MUST also transmit the invoice (stream 2 or stream 3) to the PA-TR of the TRANSPARENT INTERMEDIARY. It must transmit the status "Submitted" to the CdD PPF.
3	Receipt of the invoice	PA-TR / TRANSPARENT INTERMEDIARY / BUYER	The TRANSPARENT INTERMEDIARY and BUYER (PA-TR) platform receives the invoice (flow 2 or flow 3), performs regulatory checks, creates transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER and Third Party for processing.
4a	Processing of the invoice and updating of statuses prior to payment	The TRANSPARENT INTERMEDIARY on behalf of the BUYER	Depending on the rights assigned to it, the THIRD PARTY processes the invoice on behalf of the BUYER and sets the corresponding processing statuses with the PA-TR ("Rejected," "Accepted," "In dispute," "Approved," "Partially approved," "Suspended," etc.), for transmission to the SELLER through its PA-E.
4b	Receipt of invoice statuses	SELLER	The SELLER receives the invoice statuses following the processing of the invoice by the BUYER in accordance with the terms of the life cycle.
4c	Sharing/transmission of the invoice and life cycle with the BUYER	THIRD PARTY	The TRANSPARENT INTERMEDIARY shares the invoice and life cycle with the BUYER, either through PA-TR or directly (for example, if it records the invoice directly in the BUYER's information system).
5a 5b 5c 5d	Payment of the invoice	BUYER or the TRANSPARENT INTERMEDIARY on behalf of the BUYER	The invoice is paid either by the BUYER or by the TRANSPARENT INTERMEDIARY on behalf of the BUYER. Where applicable, the TRANSPARENT INTERMEDIARY prepares a summary document for the BUYER, listing several invoices processed on their behalf, so that the latter can proceed with payment. If the BUYER pays, they inform the TRANSPARENT INTERMEDIARY so that the latter can create the "Payment Transmitted" status.
5	Creation of the "Payment Transmitted" status	The TRANSPARENT INTERMEDIARY, on behalf of the BUYER /PA-TR	The third party creates the "Payment Transmitted" status and transmits it through its PA-TR.
6a	Payment receipt for the invoice	SELLER	The SELLER receives payment for the invoice (outside the circuit).

Step	Name of step	Responsible actor	Description
6b	Issuance of "Payment Received" status	SELLER / PA-E	If the VAT on the invoice is payable upon receipt, the SELLER creates the "Payment Received" status and transmits it to the CdD PPF via its PA-E. The PA-E also transmits the "Payment Received" status to the PA-TR for the attention of the TRANSPARENT INTERMEDIARY on behalf of the BUYER.
6c	Receipt of the "Received" status by the THIRD PARTY	The TRANSPARENT INTERMEDIARY on behalf of the BUYER PA-TR	The TRANSPARENT INTERMEDIARY receives the status "Payment Received" on behalf of the BUYER.
6d	Information for the BUYER regarding payment receipt	THIRD PARTY	The TRANSPARENT INTERMEDIARY shares the "Payment Received" status with the BUYER, either through PA-TR or directly (for example, if it performs the lettering directly in the BUYER's Information System).
7	Receipt of "Payment Received" status by the CdD PPF	PPF Data Concentrator	The PPF Data Concentrator (CdD PPF) receives the "Payment Received" status.

The TRANSPARENT INTERMEDIARY then creates an intermediary invoice for the BUYER, via its invoice issuance PA-TE, addressed to the BUYER's PA-R.

The processing of this intermediary invoice is completely standard.

Figure20: Transparent intermediary for the main BUYER with the BUYER's dedicated electronic invoicing address entrusted to a PA-TR of the transparent intermediary

Obligations of the PA-E and PA-R:

- **Know how to process the minimum base formats and profiles (invoice and CDAR).**

Obligations of the SELLER:

- Where applicable, use the EXTENDED-CTC-FR profile and fill in the "BUYER'S AGENT" (EXT-FR-FE-BG-01) or even the "ADDRESSEE" (EXT-FR-FE-BG-04).

BUYER'S obligations:

- Ensure that the management of invoices is entrusted within a controlled delegation framework, for example through a management mandate or by ensuring shared access to invoices on a common PA-R with the third party or parties.

Obligations of the TRANSPARENT INTERMEDIARY:

- Transmit invoices and life cycle statuses to the BUYER (who must record them), for example by organizing access to the PA-R or by replicating invoices and statuses to the BUYER (e.g., using standard APIs).

Optional PA-R features:

- Set up a service for replicating/sharing invoices and life cycle information with BUYERS whose invoices are processed by the Transparent Intermediary, including, where applicable, management of the Summary Document.

3.2.12 Cases 13 and 14: Subcontracting and co-contracting (B2B, particularly for private works contracts)

3.2.12.1 Special features of private works contracts, particularly those covered by the Public Procurement Code

This section deals only with cases of subcontracting and co-contracting that do not fall within the public sector, therefore, end buyers are not subject to CHORUSPRO.

At this stage, private works contracts (B2B) must be invoiced electronically via platforms (PA). To be considered invoices, draft statements must contain all mandatory information and comply with standard EN16931. In this case, they will therefore have a standard code (BT-3) indicating that they are invoices (380, for example).

In the event that it is necessary to have a prior exchange of draft statements that are not yet invoices between the SELLER and the BUYER before creating the so-called "final" invoice, the type code (BT-3) 325 meaning "Proforma invoice" may be used, which, as a reminder, is not an invoice. In this case, this document is not subject to reform. **It can be exchanged through Accredited Platforms («Plateformes Agréées»), but must not be extracted from flow 1 or transmitted to the PPF.**

Subsequently, reference can be made to the first exchange of draft statements "projet de décompte" (first "proforma invoice" exchanged) in the "final" invoice exchanged, using block BG-3 (previous invoice: BT-25 (invoice no.), BT-26 (previous invoice date, EXT-FR-FE-02 (previous invoice type code, in EXTENDED-CTC-FR profile only)). This initial draft statement can also be attached to the invoice (Block BG-24). The terms for calculating payment deadlines apply in accordance with the rules in force based on the information added to the invoice.

3.2.12.2 Overview of subcontracting processing

In the case of B2B subcontracting, two separate invoices must be processed as part of electronic invoicing:

- The subcontractor sends an invoice (F1) to the main company ("TITULAIRE"). If the transaction is eligible for VAT reverse charge, the subcontractor must use the VATEX code "VATEX-FR-AE" in BT-121 (reason for VAT exemption in block BG-23 of VAT details), as well as the mention VAT REVERSE CHARGE in BT-120 (reason for VAT exemption in text).
- The main company (the CONTRACTOR) sends an invoice (F2) to the buyer for the total amount of the services and/or goods. The F2 invoice includes all services provided by the CONTRACTOR AND by the subcontractor (and potentially subcontractors). Thus, the total without VAT corresponds to the sum of all services provided by the CONTRACTOR and their subcontractor(s). VAT is therefore also calculated on this basis.

The example below illustrates the case of a reverse-charged F1 invoice, followed by an F2 invoice with VAT:

- Invoice F1: for earthworks, reverse-charged:
 - ✓ Total amount without VAT: 10,000
 - ✓ Total VAT (BT-110): 0
 - ✓ Total with VAT (BT-112): 10,000
 - ✓ VATEX code (BT-121): VATEX-FR-AE
 - ✓ Reason for exemption in text (BT-120): SELF-ASSESSMENT
- Invoice F2, including construction of the building, for €30,000, of which €10,000 is for the subcontractor and €20,000 is for the CONTRACTOR VAT 10%:
 - ✓ Total amount without VAT: 30,000
 - ✓ Total VAT (BT-110): 3,000
 - ✓ Total with VAT (BT-112): €33,000
 - ✓ Amount already paid (BT-113): 10,000
 - ✓ Net amount payable (BT-115): 23,000

In this case, VAT is first self-assessed by the CONTRACTOR (main company) for invoice F1, then the entire VAT amount of €3,000 is declared for invoice F2.

No specific procedures are required to process these invoices; they will be treated as standard invoices. In the event of direct payment by the buyer to the subcontractor, the procedures for recording this payment differ depending on whether it is B2B or B2G (see document "1- External Specifications File FE - Chorus Pro_v1.0" in the external specifications file) in terms of how the payment request is made.

This document describes how B2B works. How B2G works is described in the document "1- External Specifications File FE - Chorus Pro_v1.0" in the external specifications file.

3.2.12.3 Case No. 13: Invoice payable by a third party: subcontracting with direct payment or payment delegation

Business case no. 13 covers the business case of a SUBCONTRACTOR who, within the framework of a contract, sends an invoice to the SELLER/CONTRACTOR (TITULAIRE) but with direct payment by the end BUYER within the meaning of the public procurement code (B2G) or by delegation within the framework of private contracts (B2B).

In the context of private contracts, the BUYER may pay the SUBCONTRACTOR directly by delegation of payment from the SELLER contractor (Article 14 of Law No. 75-1334 of December 31, 1975 (Title II)). As validation by the TITULAIRE is not regulated by law, it must be provided for in the contract. It is also possible to provide for tacit validation in the specific contract documents.

In the event of payment delegation (as opposed to direct payment in B2G with the sending of a payment request), the SUBCONTRACTOR will issue an invoice (F1) to the main company/Contractor (TITULAIRE). The "Cadre de Facturation" to be used may be the "standard" S1 (Submission of an invoice for services rendered) or the S5 "Cadre de Facturation" (Submission of an invoice for services rendered by a subcontractor, with direct payment by end buyer). The block "EXT-FR-FE-BG-02 - PAYER OF THE INVOICE" (see case no. 3) may be used and completed in the F1 invoice (between the SUBCONTRACTOR and the CONTRACTOR/TITULAIRE) to indicate that direct payment is expected from the end BUYER - project owner (recipient of the F2 invoice from the main CONTRACTOR company).

As indicated above, two invoices are issued:

- A first invoice (F1) from the SUBCONTRACTOR to the CONTRACTOR for its services;
- A second invoice (F2) from the CONTRACTOR (TITULAIRE) to the BUYER for the overall service (including services provided by the subcontractor).

Information concerning the BUYER's payment to the SUBCONTRACTOR is mentioned in Invoice F1 by the "Cadre de Facturation" S1 (Submission of a service provision invoice) or S5 (Submission by a subcontractor of a service provision invoice with direct payment by the end buyer (with tacit validation)) and by the PAYER block of the SUBCONTRACTOR's invoice, which references the third-party PAYER who is the BUYER of invoice F2.

Invoice F1:

The specific features of the data and associated management rules for invoice F1 are as follows:

- BG-4 (SELLER): SUBCONTRACTOR;
- BG-7 (BUYER): main company/Contractor (TITULAIRE);
- EXT-FR-FE-BG-02 (PAYER OF THE INVOICE): project owner/end buyer third-party payer;
- Total invoice amount (BT-112): amount of the service provided by the SUBCONTRACTOR;
- BT-23: S1 (Submission of a service invoice) or S5 (Submission by a subcontractor of a service invoice with direct payment by the end buyer (with tacit approval));
- BT-11 (Project reference), BT-17 (Tender reference, lot reference), or BT-18 (Invoiced item, with qualifier in BT-18-1 and a long UNTDID 1153 list): allows a Site reference or other reference to be entered in order to organize a payment receipt for various SUBCONTRACTOR invoices for the End BUYER (or its Project Manager in charge of validation).

The direct payment request may (MUST when the B2B transaction falls within the scope of the public procurement code) be sent via a life cycle status message (CDAR), with a dedicated status "Direct Payment Request", code 224.

This message references the invoice, which is attached to the message (MDT-96: Attachment), and is sent by the SUBCONTRACTOR's PA-E to the end BUYER's PA-R, who is thus informed. The CONTRACTOR is also designated as the recipient of this life cycle status message and receives it like any other status message.

Invoice F2:

The specific data and associated management rules for invoice F2 are:

- The END BUYER may send (highly recommended) the CONTRACTOR a "Payment sent" status for Invoice F2 for the total amount with VAT of F2 minus the total amount with VAT of Invoice F1 (i.e., the net amount payable BT-115 of Invoice F2).
- The END BUYER may then send (highly recommended) to the CONTRACTOR a second status of "Payment sent" (211), which references:
 - ✓ on the one hand Invoice F2 (MDG-32) to indicate the second partial payment of invoice F2 in the amount payable for invoice F1, with the SUBCONTRACTOR appearing as the beneficiary of the payment (the payee):
 - MDT-87: invoice number F2 (BT-1 of the invoice)
 - MDT-91: invoice type code F2 (BT-3)
 - MDT-100 (in MDG-35): invoice date F2 (BT-2 of the invoice)
 - MDG-40 (Issuer of the invoice): the CONTRACTOR (legal identifier in MDT-129)
 - MDG-41 (Recipient of the invoice): the SUBCONTRACTOR, with role code MDT-158 equal to PE (meaning Payee), i.e. the same rule as for indicating a change of payment destination to a factoring company.
 - MDG-43: Payment details:
 - MDT-207: RPA (meaning "amount paid")
 - MDT-215: the amount paid
 - MDT-216: the currency of the amount paid
 - MDT-219: payment date (with MDT-220 = 102 for a date)
 - ✓ On the other hand, Invoice F1 (in a second MDG-32) to indicate that a payment was made to the SUBCONTRACTOR on behalf of the CONTRACTOR (necessary in particular to distinguish the third-party payment of one SUBCONTRACTOR from that of another SUBCONTRACTOR):
 - MDT-87: F1 invoice number (BT-1 of the invoice)
 - MDT-91: F1 invoice type code (BT-3)
 - MDT-100 (in MDG-35): F1 invoice date (BT-2 of the invoice)
 - MDG-40 (Issuer of the invoice): the SUBCONTRACTOR (legal identifier in MDT-129)
 - MDG-43: Payment details:
 - MDT-207: MPA (means "amount paid")
 - MDT-215: the amount paid

- MDT-216: the currency of the amount paid
- MDT-219: date of payment (with MDT-220 = 102 for a date)
- The CONTRACTOR may transmit (highly recommended) a Payment life cycle status to the SUBCONTRACTOR, corresponding to that in the second MDG-32 record with the status “Payment Sent” that the CONTRACTOR received from the END BUYER for the payment of (see above, the one referencing the F1 invoice).
- The SUBCONTRACTOR may transmit its “Payment Received” life cycle status for invoice F1 (to the PPF and the HOLDER).
- The CONTRACTOR can then create its “Payment Received” life cycle status messages (in principle 2, one for each payment: total amount with VAT of invoice F1, and total amount to be paid for invoice F2, paid directly to the CONTRACTOR = total amount with VAT of invoice F2 – total amount including tax of invoice F1).

Example of payment status management in the case of a reverse charge invoice F1 for €10,000 without VAT and invoice F2 for €30,000 without VAT and €33,000 with VAT (VAT 10%), of which €23,000 is paid to the CONTRACTOR and €10,000 is paid directly to the SUBCONTRACTOR:

- “Payment Received” life cycle status from the SUBCONTRACTOR to the CONTRACTOR for the payment receipt of invoice F1 paid directly by the END BUYER: as this is a reverse charge invoice (i.e., with VAT payable by the recipient), **this status is excluded from the obligation to transmit to the PPF (and therefore must not be transmitted to it)**, but it may be transmitted to the CONTRACTOR (because in practice it is a partial payment of its F2 invoice up to the amount with VAT of F1, which here is equal to the amount without VAT of F1: €10,000):
 - ✓ MDT-87: F1 invoice number (BT-1 of the invoice)
 - ✓ MDT-91: F1 invoice type code (BT-3)
 - ✓ MDT-100 (in MDG-35): F1 invoice date (BT-2 of the invoice)
 - ✓ MDG-40 (Issuer of the invoice): the SUBCONTRACTOR (legal identifier in MDT-129)
 - ✓ MDG-43: Payment details:
 - MDT-207: MEN (means “amount with VAT received”)
 - MDT-215: amount received: €10,000
 - MDT-216: currency of the amount received: EUR
 - MDT-219: payment date (with MDT-220 = 102 for a date)
 - MDT-224: applicable VAT rate: 0% (because of reverse charge)
 - It may be useful to indicate the reason for the 0% VAT rate, for example by entering the code VATEX-FR-AE in MDT-221
- Life cycle status “Payment Received” from the CONTRACTOR to the End BUYER for the payment of €10,000, which, from the END BUYER's point of view, is a partial payment of Invoice F2, sent to the END BUYER and the PPF. As invoice F2 has a VAT rate of 10%, this will result in a payment receipt of €10,000, including €909.09 in VAT and €9,090.91 excluding VAT:
 - ✓ MDT-87: invoice number F2 (BT-1 of the invoice)
 - ✓ MDT-91: F2 invoice type code (BT-3)
 - ✓ MDT-100 (in MDG-35): F2 invoice date (BT-2 of the invoice)
 - ✓ MDG-40 (Issuer of the invoice): the CONTRACTOR (legal identifier in MDT-129)
 - ✓ MDG-43: Payment details:
 - MDT-207: MEN (meaning “amount with VAT received”)
 - MDT-215: amount received: €10,000
 - MDT-216: currency of the amount received: EUR
 - MDT-219: payment date (with MDT-220 = 102 for a date)
 - MDT-224: applicable VAT rate: 10%
- Life cycle status “Payment received” from the CONTRACTOR to the END BUYER for the payment of €23,000, sent to the END BUYER and the PPF. As invoice F2 has a VAT rate of 10%, this will result in a payment receipt of €23,000, including €2,090.91 in VAT and €20,909.09 excluding VAT:
 - ✓ MDT-87: invoice number F2 (BT-1 of the invoice)
 - ✓ MDT-91: F2 invoice type code (BT-3)

- ✓ MDT-100 (in MDG-35): F2 invoice date (BT-2 of the invoice)
- ✓ MDG-40 (Issuer of the invoice): the CONTRACTORE (legal identifier in MDT-129)
- ✓ MDG-43: Payment details:
 - MDT-207: MEN (meaning "amount with VAT received")
 - MDT-215: amount received: €23,000
 - MDT-216: currency of the amount received: EUR
 - MDT-219: payment date (with MDT-220 = 102 for a date)
 - MDT-224: applicable VAT rate: 10%

The steps in management case no. 13, illustrated in the diagram below, are as follows:

- First, for Invoice F1 before payment:

Step	Step name	Responsible party	Description
1	Creation of the invoice in the name of the CONTRACTOR (TITULAIRE), identifying the end BUYER as a third-party PAYER on the invoice	SUBCONTRACTOR	The SUBCONTRACTOR creates the F1 invoice (flow 2) via its information system. It may entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing. The BUYER (BG-7) on the invoice is the CONTRACTOR (TITULAIRE).
2	Transmission of flow 1, the invoice (flow 2) and related statuses	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, it MUST send the data required by the Administration (flow 1) to the CdD PPF. It MUST also send the invoice (flow 2 or flow 3) to the PA-TR of the CONTRACTOR (TITULAIRE) (BUYER of the F1 Invoice). It must send the status "Submitted" to the CdD PPF.
3	Receipt of the invoice	PA-TR	The CONTRACTOR's purchase invoice reception platform (PA-R) receives the invoice (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the F1 invoice available to the CONTRACTOR (TITULAIRE) for processing.
4	Processing of the invoice and updating of statuses prior to payment	The CONTRACTOR (TITULAIRE)	The CONTRACTOR (TITULAIRE) processes the invoice and sets the corresponding processing statuses with their PA-TR ("Rejected," "Accepted," "In dispute," "Approved," "Partially approved," "Suspended," etc.) for transmission to the SUBCONTRACTOR via their PA-E.
4b	Receipt of invoice statuses	SUBCONTRACTOR	The SUBCONTRACTOR receives the F1 invoice statuses following the processing of the invoice by the CONTRACTOR (TITULAIRE) in accordance with the terms of the life cycle.
5a	The SUBCONTRACTOR sends a direct payment request to the end buyer.	SUBCONTRACTOR / PA-E	The SUBCONTRACTOR sends a direct payment request to the end BUYER. It uses a Life Cycle message (CDAR), with a status of "Direct Payment Request," code 2xx, to which it attaches the F1 Invoice.
5b	Receipt of the direct payment request	PA-R / BUYER PA-TR / CONTRACTOR (TITULAIRE)	The BUYER and the CONTRACTOR (TITULAIRE) receive the Direct Payment Request, intended primarily for the BUYER.

- Next, regarding the F2 invoice:

Step	Name of step	Responsible party	Description
1	Creation of invoice F2 for the BUYER	CONTRACTOR	The CONTRACTOR (TITULAIRE) creates the invoice (flow 2) via its information system. It may entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-TE. It sends it to its PA-TE for processing.
2	Transmission of flow 1, invoice F2 (flow 2) and related statuses	PA-TE	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and for the existence of an active electronic invoicing address for the recipient, it MUST send the data required by the Administration (flow 1) to the CdD PPF. It MUST also send the invoice (flow 2 or flow 3) to the PA-R of the BUYER. It must send the status "Submitted" to the CdD PPF.
3	Receipt of the invoice	PA-R	The BUYER's platform (PA-R) receives the F2 invoice (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER for processing.
4a	Processing of the invoice and updating of statuses prior to payment	BUYER	The BUYER processes the invoice and sets the corresponding processing statuses in its PA-R ("Rejected," "Accepted," "In dispute," "Approved," "Partially approved," "Suspended," etc.) for transmission to the CONTRACTOR (TITULAIRE) via its PA-TE.
4b	Receipt of F2 invoice statuses	CONTRACTOR (TITULAIRE)	The CONTRACTOR receives the F2 invoice statuses following processing of the invoice by the BUYER (or its MOE on its behalf) in accordance with the terms of the life cycle.
5a 5b	Payment of the CONTRACTOR and the SUBCONTRACTOR	BUYER	Based on the information attached to the F2 invoice by the CONTRACTOR (TITULAIRE), and the Direct Payment Request, the BUYER pays the SUBCONTRACTOR for the F1 invoice, on behalf of the CONTRACTOR, and therefore also settles the CONTRACTOR (TITULAIRE)'s F2 invoice for the amount with VAT paid for F1. The BUYER also pays the CONTRACTOR (TITULAIRE) the balance (F2 amount with VAT – F1 amount with VAT), i.e. the Net Amount Payable (BT-115) of invoice F2.
5c	Creation and transmission of "Payment transmitted" statuses	BUYER PA-R	The BUYER may transmit the "Payment Transmitted" status to the CONTRACTOR (TITULAIRE) via PA-R (recommended, one life cycle message per payment).
5d	Receipt of "Payment Transmitted" status	CONTRACTOR (TITULAIRE) PA-TE	The CONTRACTOR (TITULAIRE) receives the "Payment Transmitted" status from its PA-TE. It transmits a "Payment Transmitted" status to the SUBCONTRACTOR for their F1 invoice.
6a	Payment receipt for invoice F2	CONTRACTOR (TITULAIRE)	The CONTRACTOR receives payment for invoice F2 (outside the circuit). This is the balance between the total with VAT for F2 and the total with VAT for F1.
6b	Issuance of "Payment Received" status	CONTRACTOR (TITULAIRE) / PA-E	If the VAT on the invoice is payable upon receipt, the CONTRACTOR (TITULAIRE) creates the status "Received" and transmits it to the CdD PPF via its PA-TE. The PA-TE also transmits the status "Received" to the PA-R for the attention of the BUYER.

Step	Name of step	Responsible party	Description
6c	Receipt of the "Payment Received" status by the BUYER	BUYER PA-R	The BUYER receives the "Payment Received" status.
7	Receipt of "Payment Received" status by the PPF CdD for F2	PPF Data Concentrator	The PPF Data Concentrator (CdD PPF) receives the "Paid" status for invoice F2 for the net amount payable for F2 (F2 amount with VAT – F1 amount with VAT).

- To continue processing F1:

Step	Step name	Responsible party	Description
5d	Creation and transmission of the "Payment transmitted" status	CONTRACTOR (TITULAIRE)	Based on the "Payment transmitted" status received from the BUYER for the direct payment of F1. The CONTRACTOR (TITULAIRE) transmits a "Payment transmitted" status to the SUBCONTRACTOR for their F1 invoice.
5	Receipt of "Payment Transmitted" status	SUBCONTRACTOR / PA-E	The SUBCONTRACTOR receives the "Payment Transmitted" status from its PA-E.
6a	Payment receipt for the invoice	SUBCONTRACTOR	The SUBCONTRACTOR receives payment for the invoice (outside the circuit).
6b	Issuance of "Payment Received" status	SUBCONTRACTOR / PA-E	If the VAT on the invoice is payable upon receipt, the SUBCONTRACTOR creates the "Payment Received" status and transmits it to the CdD PPF via its PA-E. The PA-E also transmits the "Payment Received" status to the PA-TR for the attention of the CONTRACTOR (TITULAIRE).
6c	Receipt of the "Payment Received" status by the CONTRACTOR	CONTRACTOR (TITULAIRE) PA-TR	The CONTRACTOR receives the "Payment Received" status for invoice F1.
7	Receipt of "Payment Received" status by the CdD PPF for F1	PPF Data Concentrator	The PPF Data Concentrator (CdD PPF) receives the "Paid" status relating to the Payment of F1 to the SUBCONTRACTOR.

- And finally, on the F2 payment receipt phase:

Step	Name of step	Responsible party	Description
6d	Issuance of "Cashed" status	CONTRACTOR (TITULAIRE) / PA-TE	Upon receipt of the "Paid" status from the SUBCONTRACTOR for Invoice F1, if the VAT on the invoice is payable upon receipt, the CONTRACTOR (TITULAIRE) creates the "Paid" status for Invoice F2 for the total amount with VAT of F1, and transmits it to the CdD-PPF via its PA-TE. The PA-TE also transmits the "Received" status to the PA-R for the attention of the BUYER.
6	Receipt of the "Payment Received" status by the BUYER	BUYER PA-R	The BUYER receives the "Paid" status for invoice F2, for the amount with VAT of F1.

Step	Name of step	Responsible party	Description
7	Receipt of "Paid" status by the PPF CdD for F2	PPF Data Concentrator	The PPF Data Concentrator (CdD PPF) receives the "Paid" status for Payment F2 for the amount with VAT of F1 to the CONTRACTOR, made through Direct Payment of F1 to the SUBCONTRACTOR.

Figure 21 : Subcontractor invoice (F1) to be paid by a third party and main invoice F2 from the CONTRACTOR (TITULAIRE) to the end BUYER (case of subcontracting with payment delegation).

Obligations of the SUBCONTRACTOR:

- Where applicable, use the EXTENDED-CTC-FR profile and enter the end BUYER in the "Third-party PAYER" block (EXT-FR-FE-BG-02) of the invoice.

Obligations of the SUBCONTRACTOR's PA-E:

- Know how to process the minimum base formats and profiles (invoice and CDAR).
- Know how to transmit a Direct Payment Request Life Cycle status to the End BUYER AND the CONTRACTOR (TITULAIRE).

Optional features of the SUBCONTRACTOR's PA-E:

- Create the Direct Payment Request status on behalf of the SUBCONTRACTOR.

Obligations of the End BUYER's PA-R:

- Know how to process the minimum base formats and profiles (invoice and CDAR).
- Know how to receive a "Direct Payment Request" Life Cycle status issued by a third party, without having the invoice to which it relates.

Optional features of the END BUYER's PA-R:

- Know how to process an F2 invoice, linking attachments with Direct Payment Request life cycle status messages received elsewhere.
- Know how to process/create a "Payment Transmitted" life cycle status message for an F2 invoice through F1 direct payment to the third-party SUBCONTRACTOR.

Obligations of the End BUYER:

- Knowing how to process F2 invoices associated with Direct Payment requests from SUBCONTRACTORS.

PA-TR obligations regarding receipt of invoices from the CONTRACTOR (TITULAIRE):

- Know how to process minimum base formats and profiles (invoice and CDAR).

Obligations of the PA-TE to issue invoices from the CONTRACTOR (TITULAIRE):

- Know how to process minimum base formats and profiles (invoice and CDAR).

Obligations of the CONTRACTOR (TITULAIRE):

- Create an F2 invoice, including the information required for direct payment.
- Manage the F2 payment statuses received from the BUYER, then create the F1 invoice status.

Optional features of PA-TR / PA-TE, if identical:

- Assist the CONTRACTOR (TITULAIRE) in managing F1 invoices, then create the F2 invoice, with direct payment certificates and payment statuses.

3.2.12.4 Subcontracting with direct payment (only in B2G), for information

The operation of subcontracting with direct payment in B2G requires a few specific features, particularly regarding how to express the direct payment request through a second invoice message to be submitted directly to CHORUSPRO, with a "Cadre de Facturation" S3 and by modifying the Buyer (BG-7) and Seller Agent (EXT-FR-FE-BG-03) blocks.

These specific requirements are described in the document "1- External Specifications File FE - Chorus Pro_v1.0" in the external specifications file.

3.2.12.5 Case No. 14: Invoice payable by a third party: joint contracting case B2B

In the case of co-contracting, one or more co-contractors send F1 invoices to an end BUYER. One of the co-contractors is the lead AGENT (MANDATAIRE), whose role is to "approve" the F1 invoices of the other co-contractors, thereby preparing the processing of the co-contractors' F1 invoices and the Agent's F2 invoice.

In the description of the case, the various parties involved are as follows:

- The Co-contractor sends an F1 invoice to the BUYER
- The PA-E is the Accredited Platform for issuing Co-Contractor invoices
- The AGENT is the lead contractor, on whom the BUYER relies to compile an "invoicing file" consisting of the F1 invoice (or F1 invoices in the case of multiple co-contractors) and the Agent's F2 invoice, as the lead co-contractor. As such, the Agent is both the SELLER of its F2 invoice and a third party responsible for pre-validating the Co-contractors' F1 invoices with the BUYER.
- The PA-ME is the Accredited Platform for issuing the Agent's F2 invoice.
- The BUYER is the BUYER (BG-7) of the F1 and F2 invoices.
- The PA-R is the BUYER's Accredited Platform, which has granted access rights to the Agent so that it can "approve" the Co-contractors' invoices.

In order to distinguish co-contracting invoices from others, it is recommended that the BUYER create a dedicated invoice receipt address, **for example "SIRENacheur_COTRAITANCE,"** and, if necessary, entrust it to an Accredited Platform that offers to handle the specificities of co-contracting with an Agent.

The specific features of the data and associated management rules are as follows for invoice F1:

- BG-4 (SELLER): CO-CONTRACTOR;
- BG-7 (BUYER): BUYER;
- EXT-FR-FE-BG-03 (SELLER'S AGENT): AGENT (TITULAIRE);
- BT-23: S6 (Submission of a service invoice by a co-contractor).
- BT-11 (Project reference), BT-17 (Tender reference, lot reference), or BT-18 (Invoiced item, with qualifier in BT-18-1 and a long UNTDID 1153 list): allows a Site reference or other reference to be entered in order to organize a payment receipt for various CO-CONTRACTOR invoices for the End BUYER (or its Project Manager in charge of validation), and so that the AGENT can approve them and produce a summary document.

Once the F1 invoices have been sent, the AGENT can assign "Approved" status to the BUYER's PA-R for each F1 invoice concerned by the invoicing sequence.

It can then create its F2 invoice, attaching a summary document listing all the invoices to be processed and paid (F1 and F2).

The specific features of the data and management rules for the F2 invoice are the same as those for the F1 invoice, with, if required by the BUYER or deemed necessary by the AGENT, an attachment (BG-24) corresponding to the summary document intended for the BUYER. The qualifier for this attachment (BT-123) is "SUMMARY_CO-CONTRACTING."

The BUYER has access to invoices F1 and F2, which are all "Approved" by the AGENT. The AGENT's invoice F2 contains a summary document. The common reference (e.g., a Site number associated with an invoicing period identifier) allows invoices F1 and F2 to be grouped together for overall processing.

If the BUYER wishes to entrust the management of its invoices to a project manager (PM), it simply needs to designate the PM as a third party on its PA-R, then delegate access and action rights to the PM. Where applicable, its delegation rights may depend on the presence of the MOE in the invoices as the BUYER'S AGENT (EXT-FR-FE-BG-01), bearing in mind that this requires the CO-CONTRACTOR and the AGENT to be able to enter this information in the invoices.

That being said, the steps in management case no. 14 (B2B), illustrated in the diagram below, are as follows (for invoices F1 and F2):

Step	Step name	Responsible party	Description
1 (F1)	Creation of invoice F1 for the BUYER	CO-CONTRACTOR	The CO-CONTRACTOR creates the F1 invoice (flow 2) via its information system. It may entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing. The BUYER (BG-7) in the invoice is the BUYER. The AGENT is identified as SELLER AGENT (EXT-FR-FE-BG-03) to organize its preparation role on behalf of the BUYER (status "Approved").
2 (F1)	Transmission of flow 1, the invoice (flow 2) and related statuses	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and for the existence of an active electronic invoicing address for the recipient, it MUST send the data required by the Administration (flow 1) to the CdD PPF. It MUST also send the invoice (flow 2 or flow 3) to the PA-R of the BUYER. It must send the status "Submitted" to the CdD PPF.
3a (F1)	Receipt of invoice F1	PA-R	The BUYER's platform (PA-R) receives the invoice (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER for processing.

Step	Step name	Responsible party	Description
1 (F2)	Creation of the F2 invoice for the BUYER	AGENT (MANDATAIRE)	After retrieving the F1 invoice from the CO-CONTRACTOR (either in parallel or through its access to the PA-R, if it offers this functionality), the AGENT creates the F2 invoice (flow 2) via its information system. It can entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. They are also identified as a SELLER AGENT (EXT-FR-FE-BG-03) to organize their preparation role on behalf of the BUYER (status "Approved," code 214). It can attach a summary document of all the invoices to be processed together (those of the co-contractors and its own). This document is sometimes referred to as the draft summary statement, and details in particular the amounts to be paid to each service provider (CO-CONTRACTOR, AGENT), as well as their bank details and the references of the invoices to be paid. They send the F2 invoice to their PA-ME for processing.
2 (F2)	Transmission of flow 1, the invoice (flow 2) and the related statuses	PA-ME	Once the PA-ME has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, it MUST transmit the data required by the Administration (flow 1) to the PPF Data Concentrator (CdD PPF). It MUST also send the invoice (flow 2 or flow 3) to the BUYER's PA-R. It must send the "Submitted" status to the PPF Data Concentrator.
3b (F1 and F2)	Pre-processing by the AGENT. "Approved" status on F1	AGENT (MANDATAIRE) PA-R	If the PA-R proposes it, the AGENT has access to invoices F1 and F2 (and several in the event of multiple co-contractors) on the BUYER's PA-R. Delegation rights may be exercised due to the presence of the AGENT as the SELLER's AGENT in invoices F1 and F2. The AGENT may assign the status "Approved" (code 214) to invoices F1 and F2, which allows the BUYER (or its project manager) to process invoices F1 and F2 together, with the help of the summary document attached to invoice F2.
4a (F1 and F2)	Processing the invoice and updating statuses before payment	BUYER	The BUYER processes invoices F1 and F2 and sets the corresponding processing statuses with its PA-R ("Rejected," "Accepted," "In dispute," "Approved," "Partially approved," "Pending," etc.) for transmission to the CO-CONTRACTOR via its PA-E for invoice F1 and to the AGENT via its PA-ME for invoice F2. If the AGENT has access to the PA-R and viewing rights (optional feature), they can also track the life cycle statuses assigned to invoice F1.
4b (F1 and F2)	Receipt of invoice statuses	CO-CONTRACTOR and AGENT	The CO-CONTRACTOR and the AGENT receive the F1 and F2 invoice statuses respectively, following the processing of the invoice by the BUYER in accordance with the terms of the life cycle.
5a 5b (F1 and F2)	Payment of the invoice Creation and transmission of the "Payment Sent" status	BUYER / PA-R	The BUYER pays invoice F1 to the CO-CONTRACTOR and invoice F2 to the AGENT. They can send a "Payment Sent" status to the CO-CONTRACTOR and the AGENT via the PA-R (recommended).
5c (F1 and F2)	Receipt of "Payment Sent" status	CO-CONTRACTOR / PA-E	The CO-CONTRACTOR receives the status "Payment Sent" for the F1 invoice of its PA-E

Step	Step name	Responsible party	Description
		AGENT PA-ME	The AGENT receives the status "Payment Sent" for invoice F2 from its PA-ME.
6a (F1 and F2)	Payment receipt for the invoice	CO- CONTRACTOR AGENT	The CO-CONTRACTOR receives payment for invoice F1 (outside the circuit). The AGENT receives payment for invoice F2 (off-circuit).
6b (F1 and F2)	Issuance of "Payment Received" status	CO- CONTRACTOR / PA-E AGENT PA-ME	If the VAT on the invoice is payable upon receipt, the CO-CONTRACTOR for invoice F1 and the AGENT for invoice F2 create the "Received" status for their invoices (F1 and F2) and send it to the CdD-PPF via their PA-E / PA-ME. The PA-E / PA-ME also transmits the "Received" status to the PA-R for the attention of the BUYER.
6c (F1 and F2)	Receipt of the "Payment Received" status by the BUYER	BUYER PA-R	The BUYER receives the "Payment Received" statuses for F1 and F2
7 (F1 and F2)	Receipt of "Payment Received" status by the PPF CdD	PPF Data Concentrator	The PPF Data Concentrator (CdD PPF) receives the "Paid" status for F1 and F2.

Figure22: Invoice payable by a third party (case of co-contracting in B2B)

Obligations of the CO-CONTRACTOR:

- If applicable, use the EXTENDED-CTC-FR profile and enter the AGENT in the "SELLER'S AGENT" block (EXT-FR-FE-BG-03) of the invoice.

Obligation of the CO-CONTRACTOR's PA-E:

- Know how to process the minimum base formats and profiles (invoice and CDAR).

OBLIGATIONS OF THE AGENT:

- Where applicable, use the EXTENDED-CTC-FR profile and enter the AGENT in the "SELLER'S AGENT" block (EXT-FR-FE-BG-03) of the invoice.
- Where applicable (if required by the BUYER), attach a summary document (also known as a draft summary statement for works contracts) to the F2 invoice, detailing all F1 and F2 invoices, the amounts to be paid, and the bank details to be used.
- Where applicable (if required by the BUYER and if permitted by the PA-R), affix the "Approved" status to invoices F1 and F2.

Obligations of the PA-ME of the CO-CONTRACTOR:

- Know how to process the minimum base formats and profiles (invoice and CDAR).

Obligations of the End BUYER:

- Know how to process the EXTENDED-CTC-FR profile and F2 invoices with the attached summary document.
- If an MOE is involved, allow it access to the PA-R, even if this means dedicating an electronic invoicing address for receiving invoices for processing these invoices with the MOE and choosing a PA-R that is best suited to managing this use case involving different third parties.

Obligations of the BUYER's PA-R:

- Know how to process minimum base formats and profiles (invoice and CDAR).

Optional features of the BUYER's PA-R:

- Provide the AGENT with access to CO-CONTRACTORS' invoices in order to prepare the Summary Document to be attached to the F2 invoice. The right of delegation may depend on the AGENT being listed as the SELLER'S AGENT on the F1 and F2 invoices.
- Support the grouping of CO-CONTRACTOR invoices, either by initially identifying the members of the group, or by using a common reference to be included in the invoices (site ID and invoicing period: for example, SITEXX JANUARY25, ...), and by granting the AGENT rights to organize the pre-processing of grouping and "Approval" on the PA-R, then presenting the complete file to the BUYER, if necessary going as far as organizing payment.

3.2.12.6 Case of co-contracting in B2G.

This document is not intended to describe how B2G invoices work, which is described in the document "1- External specifications file FE - Chorus Pro_v1.0" in the external specifications file.

However, for information purposes, B2G co-contracting, excluding works contracts, is in practice similar to what is described for B2B co-contracting, except that the AGENT MUST use the Chorus Pro Platform to "approve" or "reject" the F1 invoice for legitimate reasons before the BUYER continues processing.

At this stage, the SUBCONTRACTOR is also required to be registered on the Chorus Pro Platform to enable the invoice to be processed.

3.2.13 Case No. 15: Sales invoice following an order (and possible payment) by a third party on behalf of the BUYER ()

Management case No. 15 covers the business case of an order placed by a third party on behalf of the BUYER, with the third party responsible for validating the invoice and sometimes also for paying it on behalf of the BUYER.

A first concrete example is that of media purchasing, where the Advertiser is the Buyer, the Media Agency is the third party placing the order on behalf of the BUYER and may also pay the invoices on its behalf, and the Advertising Agency is the SELLER. Chapter 3.3.1 details more precisely the use of this case in the context of advertising space purchases.

This chapter will therefore describe the case where a BUYER'S AGENT organizes purchases and validation, or even payment of invoices on behalf of the BUYER.

The players are therefore as follows:

- The SELLER, with its e-invoicing system
- The BUYER'S AGENT, who uses an e-invoicing system to which the BUYER has dedicated an electronic invoicing address for receiving invoices that they have chosen, if applicable with their BUYER'S AGENT (for example, "SIRENacheteur_ACHATPUB" in the case of the purchase of advertising space).
- The BUYER, who may have their own PA-R for their other purchases, or a management solution (such as OD/SC (Compatible Solution)) that interacts with the PA-TR for receiving invoices on behalf of the BUYER.

As in other use cases involving third parties, the intervention of a third party requires, at a minimum, that they be identified, either on the issuing platform or on the receiving platform, as a third party, and with delegation rights that allow them to act on behalf of the issuer or recipient (usually the SELLER or BUYER).

The PA-TR may be:

- either the one proposed by the BUYER's AGENT and ultimately chosen by the BUYER, who becomes a simple user. In this case, the BUYER can access their invoices on the PA-TR through their main Accredited Platform or their OD/SC (Compatible Solution) (via API, replication of invoices and statuses; in practice, the BUYER's Accredited Platform acts as an OD/SC (Compatible Solution) for these invoices since it is not responsible for the address where these invoices are received.
- or the one chosen directly by the BUYER and to which the BUYER's AGENT has access and delegation. However, this PA-TR must offer the specific features required for this use case (intervention of the BUYER's third-party AGENT, management of statuses and who can set them, management of fund calls, etc.).

Once the BUYER has dedicated an address for receiving its invoices and has chosen a PA-TR to which the BUYER's AGENT has access and delegation, the specifics of case no. 15 are as follows:

- BG-4: the SELLER (advertising agency in the case of the purchase of advertising space);

BG-7: BUYER (Advertiser in the case of the purchase of advertising space), with BT-49 as the electronic invoicing address entrusted to the PA-TR to which the BUYER's AGENT has access and delegation

- EXT-FR-FE-BG-01 (BUYER'S AGENT): the third party who places the order on behalf of the Buyer (the Media Agency in the case of the purchase of advertising space) and is responsible for approving the invoice;
- EXT-EN-FE-BG-02 (PAYER): the third party paying the invoice on behalf of the BUYER, if applicable. However, as the BUYER's AGENT is already identified on the PA-TR with their rights, their presence as a third-party PAYER on the invoice is not necessarily required.
- BG-24 (Additional supporting documents): if necessary, an attached document may supplement the invoicing data to facilitate invoice validation. For example, in the media purchasing sector, there is a document and format (PPF) already used to support the invoice approval and processing process, due to the specific characteristics of advertising space purchasing services, which can therefore be attached to the invoice.

The steps in management case no. 15, illustrated in the diagram below, are as follows:

Step	Step name	Responsible actor	Description
1	Creation of invoices (F1 ... Fn) for the BUYER	SELLER	The SELLER creates its invoices F1... Fn (flow 2) via its information system. It may entrust their creation to an OD/SC (Compatible Solution) or to its PA-E. It sends them to its PA-E for processing. These invoices identify the BUYER'S AGENT as EXT-FR-FE-BG-01.
2	Transmission of flow 1, invoices F1, ... Fn (flow 2) and related statuses	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, it MUST transmit the data required by the Administration (flow 1) to the CdD PPF. It MUST also transmit the invoice (stream 2 or stream 3) to the PA-TR of the BUYER and the BUYER'S AGENT. It must transmit the status "Submitted" to the CdD PPF).

Step	Step name	Responsible actor	Description
3	Receipt of invoices F1 ... Fn	PA-TR	The PA-TR platform (of the BUYER's AGENT and the BUYER for the electronic invoicing address dedicated to these invoices) receives invoices F1 ... Fn (flow 2 or flow 3), performs regulatory checks, creates transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER for processing, which allows the BUYER's AGENT to access it by delegation of rights.
4a	Processing the invoice and updating statuses before payment	BUYER'S AGENT (on behalf of the BUYER)	The BUYER'S AGENT processes F1 invoices... Fn invoices on behalf of the BUYER and sets the corresponding processing statuses in the PA-TR ("Rejected," "Accepted," "In dispute," "Approved," "Partially approved," "Suspended," etc.) for transmission to the SELLER via its PA-E.
4b	Receipt of invoice statuses	SELLER	The SELLER (Régie) receives the invoice statuses following the processing of the invoice by the BUYER's AGENT in accordance with the terms of the life cycle.
4c	Access to invoices F1 ... Fn and life cycles for the BUYER	BUYER	The BUYER has access to the PA-TR to view their invoices and life cycle statuses.
5a 5b 5c 5d	Call for funds for payment by the BUYER'S AGENT (as third-party PAYER)	BUYER'S AGENT and BUYER	Call for funds from the BUYER'S AGENT (Media Agency), and receipt of funds to PAY invoices on behalf of the BUYER (off-circuit).
5e	Payment of the invoice Creation and transmission of the "Payment transmitted" status	BUYER'S AGENT (Third-party PAYER) / PA-TR	The BUYER'S AGENT (third-party PAYER) pays the invoice to the SELLER on behalf of the BUYER. They can send a "Payment Sent" status to the SELLER via the PA-TR (recommended).
5c	Receipt of "Payment Transmitted" status	SELLER (Regie) / PA-E	The SELLER receives the "Payment Sent" status from their PA-E
6a	Payment receipt for invoices F1, ... Fn	SELLER	The SELLER receives payment for invoices F1 ... Fn (outside the circuit).
6b	Issuance of "Payment Received" status	SELLER / PA-E	If the VAT on the invoice is payable upon receipt, the SELLER (Régie) creates the status "Payment Received" and transmits it to the Cdd PPF via its PA-E. The PA-E also transmits the "Payment Received" status to the PA-TR for the attention of the BUYER (and to which the BUYER's AGENT has access by delegation of rights).
6c	Receipt of "Payment Received" statuses	BUYER and BUYER'S AGENT PA-TR	The BUYER receives the "Payment Received" status on the PA-TR, to which the BUYER'S AGENT has access by delegation of rights.
6d	Access to "Payment Received" statuses for the BUYER	BUYER PA-TR	The BUYER has access to the PA-TR to view their invoices and "Paid" life cycle statuses.
7	Receipt of "Paid" status by the Cdd PPF	PPF Data Concentrator	The PPF Data Concentrator (Cdd PPF) receives the "Paid" status.

The BUYER's AGENT then sends a service invoice to the BUYER, which is a standard invoice exchanged between a SELLER (the BUYER's AGENT) and a BUYER.

Figure23: Sales invoice following an order (and possibly payment) by a third party (BUYER'S AGENT) on behalf of the BUYER.

SELLER obligations:

- Where applicable, use the EXTENDED-CTC-FR profile and enter the third party responsible for ordering and managing invoices in the "BUYER'S AGENT" block (EXT-FR-FE-BG-01) of the Invoice.

Obligations of the PA-E SELLER:

- Know how to process the minimum base formats and profiles (invoice and CDAR).

Obligations of the third party BUYER'S AGENT:

- Organize the receipt of invoices in order to access them, either by asking the BUYER to open access on their PA-R, or by dedicating an invoice receipt address (SIRENacheteur_ACHATPUB for example) and choosing a PA-TR shared with the Third Party (BUYER'S AGENT), offering additional services to better manage the use case.
- Process invoices F1 ... Fn on behalf of the BUYER, and in particular set the necessary processing statuses.
- Forward or give the BUYER access to F1 ... Fn invoices and their life cycle for accounting purposes.
- If the third party BUYER'S AGENT acts as a third-party PAYER, organize exchanges for fund calls, then pay the invoices on behalf of the BUYER, and transmit the corresponding life cycle statuses.

Obligations of the Third Party PA-TR (Media Agency) and the BUYER:

- Know how to process the minimum base formats and profiles (invoice and CDAR).
- Know how to give the Third Party (Media Agency) access to invoices received at the BUYER's F1 ... Fn invoice receipt invoicing address.

Optional features of the Third Party (BUYER'S AGENT) and BUYER PA-TR:

- Organize access to the BUYER from its OD/SC (Compatible Solution) or its PA-R if different from the PA-TR, so that it can view and integrate F1 ... Fn invoices and their life cycles.
- Propose a solution for managing calls for funds between the Third Party (BUYER'S AGENT) and the BUYER, and their use through the payment of invoices by the BUYER'S AGENT on behalf of the BUYER.

Obligations of the BUYER :

- Know how to process the minimum base formats and profiles (invoice and CDAR).
- Organize access for the Third Party (BUYER'S AGENT) to F1 ... Fn invoices intended for it, for example by dedicating an electronic invoicing address for receiving these invoices and entrusting this task to a PA-TR capable of offering shared processing with the third party identified as the BUYER's AGENT.

Obligation of the OD/SC (Compatible Solution) / PA-R of the BUYER :

- Know how to process the minimum base formats and profiles (invoice and CDAR).

Optional features of the BUYER's OD/SC (Compatible Solution) / PA-R:

- Interoperate with the Third Party's PA-TR to view and integrate F1 ... Fn invoices and their life cycles.
- Interoperate with the Third Party's PA-TR to manage fund calls and their use in order to obtain the "Payment Sent" or "Payment Received" life cycle statuses, enabling the preparation of the deductible VAT return (if VAT on F1 ... Fn invoices is due upon payment receipt).

3.2.14 Case No. 16: Expense invoice for reimbursement of the sales invoice paid by the third party

These invoices are outside the scope of the electronic invoicing reform. They are therefore not subject to the electronic invoicing requirement, but they can be exchanged between platforms (Accredited Platforms («Plateformes Agréées») or OD/SC (compatible solutions) or directly between companies). They have VAT categories (in the lines (BT-151: tax category), in expenses (BT-102: expense VAT type code at document level) and allowances (BT-95: allowance VAT type code at document level) at document level and in VAT detail (BT-118: VAT type code)) equal to "O" (meaning "outside VAT scope").

The EN16931 standard does not allow VAT categories "O" to be mixed with others in an invoice (currently being modified in the update to the standard).

However, the EXTENDED-CTC-FR profile already allows this. This makes it possible to have expense lines in a standard invoice with VAT-liable invoicing lines. These invoices, which include both lines subject to VAT and expense lines outside the scope of VAT (Category Code "O"), MUST be processed in accordance with e-invoicing obligations. The extracted flow 1 therefore also contains the expense lines and the corresponding VAT breakdown details.

NOTE: It should also be noted that there is a VATEX exemption code VATEX-EU-79-C, which is used with VAT Category Code "E" and can be used for expense reimbursements, which are similar to expense lines.

3.2.15 Case No. 17a: Invoice payable to a third party, payment intermediary (e.g., on Marketplace)

In this case, a BUYER orders and pays an intermediary at the time of ordering, then receives delivery and an invoice from the SELLER. This is therefore also a prepaid invoice.

Invoice F1 is the invoice corresponding to the SALE made by the SELLER to the BUYER, paid to the Payment Intermediary.

Invoice F2 is the invoice for services rendered by the payment intermediary to the SELLER.

The steps in management case No. 17a, illustrated in the diagram below, are as follows:

Step	Step name	Responsible party	Description
------	-----------	-------------------	-------------

5a	Online ordering and payment	BUYER	The BUYER places an order with a third party (e.g., online on a marketplace) and makes the payment to that payment intermediary (outside the tool).
6a	Receipt of the order amount	Payment intermediary	The intermediary receives payment for the entire order placed by the BUYER (excluding tools).
1	Creation of invoice F1 for the BUYER	SELLER	Following the commercial transaction already paid for, the SELLER creates invoice F1 (flow 2) via its information system. It can entrust the creation of this invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing. As the F1 invoice has already been paid, it has an "Amount Already Paid" (BT-113) equal to the Total Amount with VAT (BT-112), and therefore a Net Amount Payable (BT-115) equal to 0.
2	Transmission of flow 1, invoice F1 (flow 2) and related statuses	PA-E	Having carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, the PA-E MUST transmit the data required by the Administration (flow 1) to the CdD PPF. It MUST also transmit invoice F1 (flow 2 or flow 3) to the PA-R of the BUYER. It must send the status "Submitted" to the CdD PPF.
3	Receipt of the F1 invoice	PA-R	The BUYER's platform (PA-R) receives the F1 invoice (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER for processing.
6b	Issuance of "Paid" status	SELLER / PA-E	If the VAT on the invoice is payable upon receipt, the SELLER creates the "Received" status and transmits it to the CdD-PPF via its PA-E. The PA-E also transmits the "Received" status to the PA-R for the attention of the BUYER.
6c	Receipt of "Paid" status by the BUYER	BUYER PA-R	The BUYER receives the "Received" status.
7	Receipt of "Paid" status for Invoice F1 by the CdD-PPF	CdD PPF	The PPF Data Concentrator (CdD-PPF) receives the "Paid" status for Invoice F1.
5b (F1) 5 (F2)	Payment to the SELLER of the proceeds of the sale, less intermediary fees	Payment intermediary	The intermediary platform transfers the proceeds of the Sale (with VAT from Invoice F1) minus the platform fees (with VAT from Invoice F2 to be created) to the SELLER. As a result, the Intermediary receives payment of its invoice F2 for intermediary fees.
6d	Payment receipt of the net amount of F1 fees	SELLER	The SELLER receives the net proceeds of their Sale (with VAT from invoice F1 minus the with VAT from invoice F2 to be created).
1	Creation of invoice F2 for the SELLER	Payment intermediary	The payment intermediary creates invoice F2 (flow 2) via its information system. It may entrust its creation to an OD/SC (Compatible Solution) or to its PA-T. It sends it to its PA-T for processing. As Invoice F2 has already been paid, it has an "Amount Already Paid" (BT-113) equal to the Total Amount with VAT (BT-112), and therefore a Net Amount Payable (BT-115) equal to 0.

2	Transmission of flow 1, invoice F2 (flow 2) and related statuses	PA-T	Having carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, the PA-T MUST transmit the data required by the Administration (flow 1) to the PPF Data Concentrator (CdD PPF). It MUST also transmit invoice F2 (stream 2 or stream 3) to the SELLER's PA-RV. It must transmit the status "Submitted" to the PPF Data Concentrator (CdD PPF).
3	Receipt of the F2 invoice	PA-RV	The SELLER's platform (PA-RV) receives the F2 invoice (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the invoice available to the SELLER for processing.
6a	Issuance of "Paid" status	Payment intermediary PA-T	If the VAT on the invoice is payable upon payment receipt, the payment intermediary creates the "Payment Received" status and transmits it to the CdD PPF via its PA-T. The PA-T also transmits the "Payment Received" status to the PA-RV for the attention of the SELLER.
6b	Receipt of the "Paid" status of the F2 invoice by the SELLER	SELLER PA-RV	The SELLER receives the "Payment Received" status for invoice F2.
7	Receipt of "Paid" status for invoice F2 by the CdD PPF	PPF Data Concentrator	The PPF Data Concentrator (CdD PPF) receives the "Paid" status for the F2 invoice.

Figure24: Invoice payable to a third party, payment intermediary

The specific features of the data and associated management rules for F1 and F2 invoices are:

- Billing framework (Business Process Type - "Cadre de Facturation" : BT-23) meaning "Submission of an invoice already paid" (B2/S2/M2) or "Cadre de Facturation" B1/S1/M1 (see management rule BR-FR-08 of Standard XP Z12-012). As the F2 invoice is for services, it will be S2 or S1;
- Amount paid (BT-113) equal to the total amount with VAT of the invoice (BT-112);

- Amount payable (BT-115) equal to 0;
- For invoice F1, the payment method (BT-81) is not readily known to the SELLER (since they did not receive the payment). As the invoice has already been paid, payment method "57" (Standing Agreement) can be used. The Payee (BG-10) can be entered as the payment intermediary.
- For Invoice F2, the payment method can be "97" (Clearing between partners).
- The payment date is indicated by transmitting the "Payment Received" status for each F1 and F2 invoice, if VAT is payable upon payment receipt.

Obligations of the BUYER and its PA-R:

- **Know how to process the minimum base formats and profiles (invoice and CDAR).**

Obligations of the Seller and its PA-E and PA-RV:

- **Know how to process the minimum base formats and profiles (invoice and CDAR).**

Obligations of the payment intermediary:

- **Know how to process the minimum base formats and profiles (invoice and CDAR).**
- **Inform the SELLER of the payment receipt for the F1 Invoice.**

Obligations of the payment intermediary's PA-T:

- **Know how to process the minimum base formats and profiles (invoice and CDAR).**

3.2.16 Case No. 17b: Invoice payable to a third party, payment intermediary, and third-party invoicing under an invoicing mandate

This use case is the same as case 17a, except that the third-party intermediary also takes care of creating and transmitting the F1 invoice on behalf of the SELLER. To do so, they must have an invoicing mandate from the SELLER, and all the characteristics of issuing an invoice by a third-party invoicer then apply (see case no. 19).

The steps in management case no. 17b, illustrated in the diagram below, are as follows:

Step	Step name	Responsible actor	Description
0	Conclusion of an invoicing mandate	SELLER Payment intermediary and invoicing party	The SELLER and the payment intermediary/Invoicing Party enter into an invoicing mandate so that the payment intermediary/Invoicing Party can issue (and possibly file) invoices on behalf of the SELLER.
5a	Online ordering and payment	BUYER	The BUYER places an order with a third party (e.g., online on a marketplace) and makes the payment to that payment intermediary (outside the tool).
6a	Receipt of the order amount	Payment intermediary	The intermediary receives the full amount of the order placed by the BUYER (excluding the tool).
1	Creation of invoice F1 for the BUYER	Payment intermediary/Invoicing on behalf of the SELLER	Following the commercial transaction already paid for, the payment intermediary/invoicing agent creates the F1 invoice (flow 2) via its information system. It may entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-T. It sends it to its PA-T for processing.

			As the F1 invoice has already been paid, it has an "Amount already paid" (BT-113) equal to the Total amount with VAT (BT-112), and therefore a Net amount payable (BT-115) equal to 0.
2	Transmission of flow 1, invoice F1 (flow 2) and related statuses	PA-T Third-party invoicing entity	The PA-T, having carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, MUST transmit the data required by the Administration (flow 1) to the CdD PPF. It MUST also transmit invoice F1 (flow 2 or flow 3) to the PA-R of the BUYER. It must send the status "Submitted" to the CdD PPF. The third-party invoicing entity (with its PA-T, if applicable) makes the F1 invoice available to the SELLER, allowing the SELLER to potentially reject it before it is transmitted (see case 19).
3	Receipt of the F1 invoice	PA-R	The BUYER's platform (PA-R) receives the F1 invoice (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER for processing.
6b	Issuance of "Payment Received" status	Payment intermediary / Invoicing on behalf of the SELLER PA-T	If the VAT on the invoice is payable upon receipt, the payment intermediary/invoicing party creates the status "Received" and transmits it to the CdD-PPF via its PA-T. The PA-T also transmits the status "Received" to the PA-R for the attention of the BUYER.
6c	Receipt of the "Payment Received" status by the BUYER	BUYER PA-R	The BUYER receives the "Payment Received" status.
7	Receipt of "Paid" status for Invoice F1 by the CdD-PPF	CdD PPF	The PPF Data Concentrator (CdD-PPF) receives the "Paid" status for Invoice F1.
5b (F1) 5 (F2)	Payment to the SELLER of the proceeds of the sale, less intermediary fees	Payment intermediary	The intermediary's platform transfers the proceeds of the sale (with VAT from Invoice F1) minus the platform fees (with VAT from Invoice F2 to be created) to the SELLER. As a result, the Intermediary receives payment of its invoice F2 for intermediary fees.
6d	Receipt of the net amount of F1 fees	SELLER	The SELLER receives the net proceeds of their Sale (with VAT from invoice F1 minus with VAT from invoice F2 to be created).
1	Creation of invoice F2 for the SELLER	Payment intermediary	The payment intermediary creates invoice F2 (flow 2) via its information system. It may entrust its creation to an OD/SC (Compatible Solution) or to its PA-T. It sends it to its PA-T for processing. As Invoice F2 has already been paid, it has an "Amount Already Paid" (BT-113) equal to the Total Amount with VAT (BT-112), and therefore a Net Amount Payable (BT-115) equal to 0.

2	Transmission of flow 1, invoice F2 (flow 2) and related statuses	PA-T	Having carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, the PA-T MUST transmit the data required by the Administration (flow 1) to the PPF Data Concentrator (CdD PPF). It MUST also transmit invoice F2 (stream 2 or stream 3) to the SELLER's PA-RV. It must transmit the status "Submitted" to the PPF Data Concentrator (CdD PPF).
3	Receipt of the F2 invoice	PA-RV	The SELLER's platform (PA-TV) receives the F2 invoice (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the invoice available to the SELLER for processing.
6a	Issuance of "Paid" status	Payment intermediary PA-T	If the VAT on the invoice is payable upon receipt, the payment intermediary creates the status "Received" and transmits it to the CdD PPF via its PA-T. The PA-T also transmits the status "Received" to the PA-RV for the attention of the SELLER.
6b	Receipt of the "Payment Received" status of the F2 invoice by the SELLER	SELLER PA-RV	The SELLER receives the "Payment Received" status for invoice F2.
7	Receipt of "Payment Received" status for F2 invoice by CdD PPF	PPF Data Concentrator	The PPF Data Concentrator (CdD PPF) receives the "Paid" status for invoice F2.

Figure25: Invoice payable to a third party, payment intermediary, and third-party invoicing under an invoicing mandate.

The specific features of the data and associated management rules are:

- For the F1 invoice:
 - ✓ "Cadre de Facturation" B2/S2/M2 ("Submission of an invoice already paid") or "Cadre de Facturation" B1/S1/M1 (see management rule BR-FR-08 of Standard XP Z12-012).
 - ✓ Amount paid (BT-113) equal to the total amount with VAT of the invoice (BT-112).
 - ✓ Amount to be paid (BT-115) equal to 0.
 - ✓ If applicable, the third-party invoicing entity (payment intermediary) may be present in EXT-FR-FE-BG-05 of the EXTENDED-CTC-FR profile.
 - ✓ As the third-party invoicing entity is also the payment intermediary, it can provide information on the payment method used.
 - ✓ To receive the statuses, the F1 invoice must contain an electronic address for the SELLER (BT-34) to which the invoicing party has access in order to receive the statuses (and therefore entrusted to the PA-T in the event of interoperability with dynamic discovery, as on the PEPPOL network).
- For the F2 invoice
 - ✓ "Cadre de Facturation" S2 ("Submission of an invoice already paid") or S1 (see management rule BR-FR-08 of Standard XP Z12-012);
 - ✓ Amount paid (BT-113) equal to the total amount with VAT of the invoice (BT-112);
 - ✓ Amount payable (BT-115) equal to 0;
 - ✓ The payment method may be equal to "97" (Clearing between partners).
- For F1 and F2 invoices, the payment date is indicated by the transmission of the "Received" status for each F1 and F2 invoice, if VAT is payable upon receipt.

Obligations of the BUYER and its PA-R:

- **Know how to process the minimum base formats and profiles (invoice and CDAR).**

Obligations of the Seller and its PA-RV:

- **Know how to process the minimum base formats and profiles (invoice and CDAR).**

Obligations of the payment intermediary/third-party INVOICER:

- **Know how to process the minimum base formats and profiles (invoice and CDAR).**
- **Transmit information relating to the F1 invoice and its life cycle to the SELLER.**

Obligations of the payment intermediary/third-party INVOICER entity's PA-T:

- **Know how to process the minimum base formats and profiles (invoice and CDAR).**

Optional features of the payment intermediary/third-party INVOICER entity's PA-T:

- **Allow the Seller access to the PA-T to view invoices issued on their behalf and the associated life cycle statuses.**

3.2.17 Case No. 18: Management of debit notes

A debit note is not an invoice. A debit note is a document issued by a SELLER to its BUYER stating an amount owed by the latter to the former. In principle, if accepted by the customer, this debit note will have given rise to or should give rise to an invoice.

According to this definition, debit notes do not fall within the scope of electronic invoicing and are not subject to flow 1 or international B2B sales e-reporting. However, an invoice related to this transaction should have been sent.

This case does not apply to debit notes that are treated as invoices when they are subject to VAT and include all the mandatory information (e.g., re-invoicing to a joint venture). In this case, these debit notes must therefore be electronic invoices, classified as invoices (BT-3 equal to 380, for example, for a commercial invoice).

If the debit note is issued by the buyer and shows a debt owed to them by the seller, then the seller should issue a credit note.

In practice, this debit note may also be issued in the form of a credit note by the BUYER (self-billed credit note, type code BT-3 equal to 261), if the latter has an invoicing mandate, and use an Accredited Platform to transmit this self-billed credit note to the SELLER.

3.2.18 Cases 19a and 19b: Invoice issued by a third party on behalf of the SELLER under an Invoicing Mandate

The SELLER may entrust a third party with the creation of its sales invoices. In this case, the third party **MUST** have an invoicing mandate, the terms and conditions of which are described in BOI-TVA-DECLA-30-20-10, Articles 340 to 560, and in BOI-TVA-DECLA-30-20-10-30, Articles 70 to 290.

It is therefore necessary to distinguish between two types of invoices issued by third parties:

- Invoices issued by third parties other than the BUYER (case no. 19a). In this case, there are two possibilities:
 - ✓ The SELLER provides the invoicing data to the third-party invoicer provider, including the invoice number. The third-party invoicer provider creates the invoice based on this data, in the target format agreed upon with the SELLER. The SELLER may decide to create a dedicated chronological numbering series, particularly if it creates some of its invoices itself.
 - ✓ The third-party invoicer creates the invoice on behalf of the SELLER based on data that it manages itself elsewhere, for example because it organized the sale (in the case of a marketplace or distributor). In this case, it must create a dedicated sequential numbering series for each SELLER for whom it creates invoices in its name and on its behalf.
- Invoices issued by the BUYER. This is referred to as self-billing (case no. 19b). The BUYER must have an invoicing mandate and, as they will be creating invoices based on their own data, they **MUST** create a

chronological invoice numbering series for each SELLER (and not a global series for all SELLERS for whom they create self-billed invoices). Invoices are sent from the BUYER to the SELLER, which impacts the processing procedures of Accredited Platforms («Plateformes Agréées»), since in all other cases the invoice is always issued by a SELLER or a third party representing them to the BUYER.

In all cases, the SELLER must have the invoices that the third party has created on its behalf, as well as the life cycle statuses, for its accounting and tax returns. It is therefore up to the SELLER and its invoicing agent (Invoicer "Facturant") to organize themselves to do this. In the case of self-billing, the SELLER has this by default.

The Agent, whether a third party or the BUYER, must be aware of the SELLER's VAT regime at a minimum when it has an impact on the invoice it creates on its behalf. In particular, it must know whether the SELLER is a franchisee and be aware that the latter may exceed its VAT exemption threshold (and therefore allow it to indicate this).

3.2.18.1 Case No. 19a: Invoice issued by a third-party invoicing with an invoicing mandate

The invoicer handles invoicing on behalf of the SELLER: they are responsible for creating the invoice and sending it to the BUYER. The SELLER receives payment for the invoice and therefore initiates the creation of the "paid" status if VAT is due upon receipt.

Invoices falling within the scope of e-invoicing must be issued by an Accredited Platform. This may be:

- Either the SELLER's Accredited Platform, meaning the one that the SELLER uses to issue all of its invoices. In this case, the Agent is an intermediary who has access to the SELLER's Accredited Platforms («Plateformes Agréées») and can submit invoices on their behalf. If the Agent has multiple invoicing mandates, they must have access rights to multiple Accredited Platforms («Plateformes Agréées»).
- Either the Agent's Accredited Platform, i.e., the Accredited Platform that the Agent has chosen to issue the invoices it creates. However, in order to do so, and so as not to impact the recipient's processing, which is indifferent to whether the invoices it receives are sent by the SELLER or its Agent on its behalf, the e-invoicing platform issuing the invoices has first ensured that the invoicing mandate exists and has implemented it in such a way as to distinguish between invoices issued on behalf of each SELLER, which amounts to considering the SELLER as a user of the e-invoicing platform, even if they are not a customer. This nevertheless implies that the Agent, with the help of its e-invoicing solution, can give the SELLER access to the invoices it issues on its behalf (or send them to it), and potentially to the related life cycle statuses.

Consequently, whether the PA-E is the one chosen by the SELLER or that of the Agent, it processes the invoice in the same way, extracts flow 1, and transmits the invoice to the BUYER.

The Agent can declare itself in the invoice in the Third Party Billing block (EXT-FR-FE-BG-05) of the EXTENDED-CTC-FR profile. Tax doctrine BOI-TVA-DECLA-30-20-10-30 (§ 210) recommends, in order to avoid any ambiguity, that invoices issued by a third party specially authorized for this purpose should include a statement such as "invoice issued by A on behalf of and for the account of B." This can be done in a note (BG-1), with Subject Code (BT-21 = DCL), and the text in BT-22.

When the Agent uses its own PA-E, it is also necessary to arrange for the return of the statuses. This is because the implementation of network interoperability with dynamic discovery (PEPPOL) requires that statuses be returned to the SELLER's electronic address (BT-34).

It is therefore necessary to organize the SELLER's electronic address so that the statuses arrive where the Agent and the SELLER want them to arrive, namely:

- Either on the PA-E of the Invoicing Agent: the most common case. In this case, the Agent enters an electronic address in BT-34 for which it has designated its PA-E as the status recipient. This address is not intended to be entered in the PPF Directory («Annuaire») since it is not supposed to receive invoices.
- Or directly on the SELLER's Accredited Platform, if the latter wishes to directly monitor the life cycle of invoices issued by the Agent on its behalf.

In practice, a distinction should be made between the description:

- a solution where the SELLER and the Agent have access to the same PA-E, whether it is the SELLER's PA-E to which the Agent has access or the Agent's PA-E to which the SELLER has access (**Option 1**),
- or one where the SELLER does not have access to the PA-E of the Agent issuing the invoice (**Option 2**).

3.2.18.1.1 *Option 1: the SELLER and the Agent share the same e-invoicing platform for issuing invoices*

In this case, the e-invoicing platform has set up the SELLER as the issuer of invoices and the AGENT as a third party with the authority to create invoices on behalf of the SELLER and to view the life cycle statuses, or even set some of them.

The PA-E may also offer pre-validation services for invoices to be issued by the SELLER.

Step	Step name	Responsible actor	Description
0	Invoicing mandate	Billing Agent and SELLER	The Invoicer and the Seller (Principal) enter into an Invoicing Mandate.
1	Creation of the invoice for the BUYER	Billing Agent, on behalf of the SELLER	Following a commercial transaction (order/delivery, service contract, spot purchase, etc.), the Billing Agent creates the invoice (flow 2) via its information system or based on the invoicing data provided by the SELLER. It may entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing.
2	Transmission of flow 1, the invoice (flow 2), and related statuses	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, it MUST transmit the data required by the Administration (flow 1) to the CdD PPF. It MUST also transmit the invoice (flow 2 or flow 3) to the PA-R of the BUYER. It must send the status "Submitted" to the CdD of the PPF.
3	Receipt of the invoice	PA-R	The BUYER's platform (PA-R) receives the invoice (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER for processing.
4a	Processing of the invoice and updating of statuses prior to payment	BUYER	The BUYER processes the invoice and sets the corresponding processing statuses with its PA-R ("Rejected," "Accepted," "In dispute," "Approved," "Partially approved," "Suspended," etc.) for transmission to the SELLER through its PA-E. In practice, the statuses are sent to the E-PA responsible for the invoicing address shown on the invoice in BT-34.
4b	Receipt of invoice status	SELLER	The SELLER receives the invoice status following processing of the invoice by the BUYER in accordance with the terms of the life cycle.
5	Payment of the invoice Creation and transmission of the "Payment transmitted" status.	BUYER / PA-R	The BUYER pays the invoice to the SELLER. They can send a "Payment Sent" status to the SELLER via the PA-R (recommended).
6a	Payment receipt for the invoice	SELLER	The SELLER receives payment for the invoice (outside the circuit).
6b	Issuance of "Payment Received" status	SELLER / PA-E	If the VAT on the invoice is payable upon payment receipt, the SELLER creates the "Payment Received" status and transmits it to the CdD PPF via its PA-E. The PA-E also transmits the "Payment Received" status to the PA-R for the attention of the BUYER.
6c	Receipt of "Payment Received" status by the BUYER	BUYER PA-R	The BUYER receives the "Payment Received" status.

Step	Step name	Responsible actor	Description
7	Receipt of "Payment Received" status by the PPF CdD	PPF Data Concentrator	The PPF Data Concentrator (CdD PPF) receives the "Paid" status.

Figure26: Invoice issued with invoicing mandate (option 1)

As the SELLER has access to the PA-E, both the SELLER and the Invoicer have access to the issued invoice and its life cycle statuses.

Obligations of the BUYER and its PA-R:

- Know how to process the minimum base formats and profiles (invoice and CDAR).

Obligations of the Invoicer:

- Know how to process the minimum base formats and profiles (invoice and CDAR).
- Be familiar with the SELLER's VAT regime if it affects invoices and enable the SELLER to notify changes (particularly for franchisees on a basic basis).
- Inform the SELLER of the invoices it creates on its behalf, as well as the life cycle status of these invoices.

Obligations of the SELLER:

- Submit the "Paid" status or inform the Agent of the payment so that the Agent can submit it on their behalf.

Obligations of the PA-E:

- Know how to process the minimum base formats and profiles (invoice and CDAR).

Optional features of the PA-E for the payment intermediary/third-party Invoicer:

- **Allow shared access to the Seller on the e-invoicing platform to access invoices issued on their behalf and the associated life cycle statuses.**
- **Allow the SELLER to directly assign the status "Paid."**

3.2.18.1.2 Option 2: The SELLER does not have access to the PA-E of the Invoicer

This case is quite similar to Option 1, except that the SELLER does not have access to the PA-E. It is therefore up to the Invoicer to share the invoice with the SELLER before it is issued (as part of their mandate), then send them the invoice created on their behalf, and then share the life cycle statuses with them.

Finally, the SELLER must inform the Agent when the invoice has been paid so that the Agent can create and send the "Paid" status, although it is possible for this status to be sent directly by the SELLER.

Figure27: Invoice issued with invoicing mandate (option 2)

Obligations of the BUYER and its PA-R:

- **Know how to process the minimum base formats and profiles (invoice and CDAR).**

Obligations of the Billing Agent:

- **Know how to process the minimum base formats and profiles (invoice and CDAR).**
- **Be familiar with the SELLER's VAT regime if it affects invoices and enable them to notify changes (particularly for franchisees on a basic basis).**
- **Inform the SELLER of the invoices it creates on its behalf, as well as the life cycle status of these invoices.**
- **Organize the SELLER's electronic address (BT-34) so that the life cycle statuses are sent directly to the PA-E, or even to the SELLER's Accredited Platform /OD/SC (Compatible Solution), if this has been chosen.**

SELLER obligations:

- **Submit the "Paid" status or inform the Agent of the payment so that the Agent can submit it on its behalf.**

Obligations of the PA-E:

- **Know how to process the minimum base formats and profiles (invoice and CDAR).**

Optional features of the PA-E of the payment intermediary/third-party invoicer:

- **Allow shared access to the Seller on the PA-E to access invoices issued on its behalf and the related life cycle statuses.**

3.2.18.2 Case No. 19b: Self-billing

This case deals with self-billing, i.e., the creation and transmission of an invoice by the BUYER to the SELLER. This first requires that the BUYER have an invoicing mandate from the SELLER. This means knowing the SELLER's VAT regime when it has an impact on invoicing, and in particular if the SELLER is a franchisee or even if they are not subject to VAT. If the SELLER is a franchisee, the BUYER must allow for the possibility of the SELLER notifying them of a threshold exceeding.

Self-billed invoices must be sent by the BUYER to the SELLER. Consequently, the BUYER must record purchase invoices that it issues (instead of receiving them), and the SELLER must record sales invoices that it receives instead of issuing them.

For invoices within the scope of the reform for the "e-invoicing" component, these invoices MUST be electronic and MUST be exchanged through Accredited Platforms («Plateformes Agréées»). However, it is the PA-E issued by the BUYER that must produce flow 1 and transmit it to the CdD of the PPF.

The statuses also work in reverse, except for those relating to payment:

- The statuses "Submitted" / "Rejected on issue" / "Issued" are created by the BUYER's PA-E.
 - ✓ However, in the event of a "Rejected on issue" status, the SELLER must be informed, as the rejected invoice is supposed to be in their accounts, as well as its cancellation (and this invoice could not be exchanged between PAs). Otherwise, the SELLER will have gaps in the numbering sequence created by its BUYER on its behalf.
- The statuses "Received," "Rejected," and "Made Available" are created by the SELLER's PA-R. In the event of a "Rejected" status, the BUYER MUST cancel the invoice in its accounts and the SELLER MUST manage the fact that an invoice has been created in its name and on its behalf and has been "Rejected."
- The processing statuses are created by the SELLER, namely:
 - ✓ "Refused" status, normally rare as it is only used in the event of incorrect addressing, but which will result in the cancellation of the corresponding pre-filled VAT and may require the invoice to be canceled by both parties. In this case, since the recipient is the SELLER, they cannot consider that the invoice issued on their behalf does not have to be accounted for. The BUYER and the SELLER must therefore cancel the "Rejected" invoice in their respective accounts, justified by the "Rejected" status. In the event of an erroneous rejection, the SELLER and the BUYER may agree to disregard it and continue processing the invoice. However, the pre-filled VAT amounts for each of them will differ from their respective VAT returns by the amount of the items on the rejected invoice.
 - ✓ "Approved," "Partially Approved," and "Suspended" statuses, which may lead to credits or a "Completed" status transmitted by the BUYER.
- The "Completed" status is transmitted by the BUYER (issuer of the invoice).
- However, payment statuses continue to be issued by the BUYER (or on its behalf) for the "Payment Sent" status and by the SELLER (or on its behalf) for the "Received" status.
- In the event of factoring after the invoice has been transmitted, the corresponding status remains issued by the SELLER (or on its behalf).

Self-billed invoices must be declared using the following dedicated typecodes (BT-3):

- 389: self-billed invoice (equivalent to 380)

- 501: self-billed factored invoice (upon issuance, equivalent to 393: factored invoice)
- 500: self-billed pre-payment invoice (equivalent to 386: pre-payment invoice)
- 471: self-billed corrected invoice (equivalent to 384: corrected invoice)
- 473: self-billed corrected invoice factored (equivalent to 472: corrected invoice factored)
- 261: self-billed credit note (equivalent to 381: credit note)
- 502: self-billed credit note factored (equivalent to 396: factored credit note).

The management rules are then the same as those for invoices and credit notes, bearing in mind that PA-E is the Accredited Platform of the BUYER (issuer of the invoice) and PA-R is the Accredited Platform of the SELLER (recipient of the invoice), and with the following addressing rules:

- The self-billed invoice (identified by the BT-3 value) MUST be issued by the BUYER (and therefore the PA-E MUST have the BUYER on file), addressed to the SELLER.
- The recipient's invoicing electronic address is the one in the SELLER block, in BT-34.
- The PPF Directory («Annuaire») MUST be consulted for the SELLER (SELLER's SIREN in BT-30). Where applicable, the SELLER's SIRET is in BT-29 with a schemeID (BT-29-1) equal to "0009". Similarly, a SELLER's CODE_ROUTAGE may be present in BT-29 with the schemeID "0224".
- The electronic address for receiving return statuses is the address in the BUYER block in BT-49. The PA-E and PA-R can organize exchanges so that statuses are exchanged between them throughout the life cycle, or so that they are exchanged between the Platforms in charge of the respective electronic addresses after a Platform change (particularly in the case of network interoperability with dynamic discovery such as the PEPPOL network).

The steps in management case No. 19b, illustrated in the diagram below, are as follows:

Step	Name of step	Responsible actor	Description
0	Invoicing mandate	BUYER and SELLER	The BUYER and the SELLER enter into a Invoicing Mandate giving the BUYER the ability to self-bill the SELLER.
1	Creation of the invoice by the BUYER to the SELLER	BUYER	Following a commercial transaction, the BUYER creates the invoice (flow 2) via its information system. It may entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing. The invoice has a type code (BT-3) in the list of self-billing codes.
2	Transmission of flow 1, the invoice (flow 2) and related statuses	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, it MUST transmit the data required by the Administration (flow 1) to the CdD PPF. It MUST also transmit the invoice (flow 2 or flow 3) to the PA-R of the SELLER. It must send the status "Submitted" to the CdD PPF.
3	Receipt of the invoice	PA-R	The SELLER's platform (PA-R) receives the invoice (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the invoice available to the SELLER for processing.
4a 4b	Rejection or refusal of the invoice by PA-R or the SELLER	PA-R SELLER	If the invoice is "Rejected" by PA-R or "Refused" by the SELLER, the corresponding status is transmitted to the BUYER.
4c	Cancellation of the invoice following Rejection/Refusal	BUYER SELLER	In the event of a Refusal or Rejection of an invoice upon receipt (PA-R), the SELLER on the one hand and the BUYER on the other must cancel the invoice in their accounts, justified by the "Rejected" status.

Step	Name of step	Responsible actor	Description
			In the event of an erroneous Refusal, the BUYER and the SELLER may continue processing the invoice if they wish, resulting in a discrepancy between the pre-filled VAT and their declaration.
4d 4e 4f	In the event of acceptance of the invoice ("Accepted" status), processing of the invoice by the SELLER, with the following life cycles	SELLER	The SELLER processes the invoice and sets the corresponding processing statuses in its PA-R ("Accepted," "In dispute," "Approved," "Partially approved," "Suspended," etc.) for transmission to the BUYER via its PA-E. In practice, the statuses are sent to the PA-E responsible for the invoicing address shown on the invoice in BT-49.
4g	Receipt of invoice status	BUYER	The SELLER receives the invoice status following processing of the invoice by the BUYER in accordance with the terms of the life cycle.
5	Payment of the invoice Creation and transmission of the "Payment transmitted" status.	BUYER / PA-E	The BUYER pays the invoice to the SELLER. They can send a "Payment Sent" status to the SELLER via the PA-E (recommended).
6a	Payment receipt for the invoice	SELLER	The SELLER receives payment for the invoice (outside the circuit).
6b	Issuance of "Payment Received" status	SELLER / PA-R	If the VAT on the invoice is payable upon rpayment eceipt, the SELLER creates the "Payment Received" status and transmits it to the CdD PPF via its PA-E. The PA-E also transmits the " Payment Received" status to the PA-E for the attention of the BUYER.
6c	Receipt of "Payment Received" status by the BUYER	BUYER PA-R	The BUYER receives the "Payment Received" status.
7	Receipt of "Payment Received" status by the PPF CdD	PPF Data Concentrator	The PPF Data Concentrator (CdD PPF) receives the "Payment Received" status.

Figure28: Self-billing

BUYER's obligations:

- Know how to process the minimum base formats and profiles (invoice and CDAR) and the practice of self-billing, including the management of a chronological series of invoice numbers dedicated to each SELLER.
- Have an invoicing mandate with its SELLER, taking into account its VAT regime.

Obligations of the BUYER's PA-E:

- Know how to process the minimum base formats and profiles (invoice and CDAR).
- Know how to process self-billed invoices, i.e., process a self-billed -invoice on behalf of a BUYER listed on its platform to the SELLER identified in the invoice in block BG-4, then manage partially reversed life cycle exchanges.

SELLER obligations:

- Know how to process minimum base formats and profiles (invoice and CDAR) and the practice of self-billing.
- Have an invoicing mandate with its BUYER.
- Know how to process self-billed invoices that have been rejected or even refused by the BUYER.

Obligations of the SELLER's PA-R:

- Know how to process minimum base formats and profiles (invoice and CDAR) and the practice of self-billing.

- **Know how to accept self-billed invoices addressed to one of your users, identified in the SELLER (BG-4) block of the invoice.**
- **Know how to manage partially reversed life cycle status exchanges.**

3.2.19 Cases 20 and 21: Pre-payment invoice and final invoice after advance payment

A payment on account for a purchase or the provision of services implies a firm commitment by both parties and constitutes an advance payment. All taxable entities are required to issue an invoice for advance payments paid to them (Article 289-I.1.c of the CGI) before any of the transactions referred to in I.1.a and b of the same article are carried out (unless expressly provided otherwise). VAT is payable upon receipt of the advance payment for both the delivery of goods and the provision of services, even if option on “debits”.

The buyer pays an initial installment on the amount due for the purchase of goods or services. For example, when a company hires the services of a moving company, it must pay part of the total amount before the move is carried out. The moving company issues a pre-payment invoice and a final invoice after the advance payment has been paid following the move.

The pre-payment invoice is not recorded in the income statement, but in the balance sheet (customer advance payment for the SELLER or supplier advance payment for the BUYER). It has the following characteristics:

- The invoice type code (BT-3) SHALL be "advance payment": 386 for a pre-payment invoice, 503 for a CREDIT NOTE on a pre-payment invoice.
- The Billing Framework (“Cadre de Facturation”) is the one corresponding to the invoice, generally B1 / S1 / M1 depending on whether it is an advance payment on Goods, Services or Mixed.
- The wording of the pre-payment invoice line can be a simple reference to a quote indicating a pre-payment percentage, for example, "30% pre-payment on quote xxx."
- VAT applies to each line, as in a standard invoice. If there are multiple applicable VAT rates, the corresponding number of pre-payment lines should be created, on a pro rata basis.

The final invoice after the advance payment must detail all the goods or services invoiced, which are recorded in the income statement (revenue or expenses). This leads to a VAT calculation for the entire service or delivery, even though part of it has already been paid for in the pre-payment invoice. There are two possible solutions to this issue:

- First, as is common to both approaches, the following rules must be followed:
 - ✓ Typecode (BT-3): the one corresponding to the invoice (i.e., 380, etc.)
 - ✓ Billing framework (“Cadre de Facturation”): B4 / S4 / M4 meaning "final invoice after advance payment."
 - ✓ Reference to the pre-payment invoice(s) in the header, in block BG-3, with:
 - BT-25: pre-payment invoice number
 - BT-26: Date of the pre-payment invoice
 - EXT-FR-FE-02: pre-payment invoice type code (only usable with the EXTENDED-CTC-FR profile)
- Then, first option: include the advance payment lines in the invoice lines:
 - ✓ Name/Description (BT-153/BT-154): indicating an advance payment transfer
 - ✓ Quantity: -1
 - ✓ Gross and Net unit price (BT-148 / BT-146): amount of the advance payment transferred
 - ✓ Reference to previous invoice in the line (EXT-FR-FE-BG-06): the reference to the pre-payment invoice, number, date, and above all the type code (EXT-FR-FE-137), equal to 386, which allows this line to be identified as an advance payment transfer for automatic processing.
 - ✓ Then applicable VAT, total without VAT as for all lines
 - ✓ As a result, line-item accounting allows for the recording of the entire turnover/expenses on the one hand and the counterparties of the advance payments on the other. The total without VAT of the invoice (BT-109) is equal to the net amount between the total without VAT of the entire service/delivery minus the advance payment without VAT. The VAT (BT-110) therefore corresponds to the net VAT due. The total amount with VAT (BT-112) corresponds to the net amount payable (BT-115).
 - ✓ Advantage: the VAT is correct. The pre-filling is correct.

- ✓ Disadvantage: it is necessary to record the amount on the line, because recording it at the bottom without correction would result in recording revenue/expenses reduced by the pre-tax amount of the pre-payment(s).
- **Second option:** use the amount already paid at the bottom (BT-113):
 - ✓ The total without VAT (BT-109) corresponds to the total services/deliveries. This is the amount that is reported in flow 1.
 - ✓ VAT is calculated on this basis, so it includes the VAT already paid with the advance invoice. This is the amount that is reported in flow 1.
 - ✓ The total amount with VAT corresponds to the total amount of services/deliveries.
 - ✓ The amount already paid (BT-113) is equal to the total with VAT on the pre-payment invoice.
 - ✓ The net amount payable corresponds to the balance payable.
 - ✓ Disadvantage: the amount already paid does not indicate the VAT already paid on it. The data reported in flow 1 does not take into account the VAT already paid through the advance payment. The pre-filled VAT will therefore be incorrect.
 - ✓ The presence of the previous invoice and the "Cadre de Facturation" B4/S4/M4 should be sufficient to inform the BUYER of the specific accounting requirements necessitating the previous invoice for the correct accounting of the invoice and VAT.
 - ✓ **NOTE:** It is possible to write the corrected VAT details in a note (bearing in mind that there is a Factur-X extension for this purpose, which is not currently integrated into the EXTENDED-CTC-FR profile).

The pre-payment invoice may be an invoice that has already been paid, when it is created after the advance payment has been paid. It may also be an invoice to be paid when the SELLER issues a pre-payment invoice to be paid.

Advance invoices that have already been paid follow the same rules as invoices that have already been paid, namely:

- "Cadre de Facturation" B2 / S2 / M2 ("Submission of an invoice that has already been paid") or "Cadre de Facturation" B1 / S1 / M1;
- Amount paid (BT-113) equal to the total amount with VAT of the invoice (BT-112);
- Consequently, the Amount Payable (BT-115) is equal to 0;
- The Due date (BT-9), if present, is equal to the date of payment of the advance payment (prior to or equal to the invoice date).
- As VAT is payable upon payment, the SELLER SHALL send a "Payment Received" life cycle status (via a Lifecycle 6 flow) to its PA-E so that it can be forwarded to the PPF's CdD and the BUYER's PA-R. This status MAY be sent at the same time as the invoice is issued and MUST be sent during the *e-reporting* period for payment data.
- However, the administration cannot impose the transmission of payment data relating to advance payments on deliveries of goods as the law currently stands. Nevertheless, the "Received" statuses on these pre-payment invoices for deliveries of goods can be sent to the PPF CdD, which will accept them, as future changes to the law may make them mandatory.

The steps in cases 20 (advance payment invoice) and 21 (final invoice) are as follows for an advance payment invoice that has already been paid (phases 4 of invoice processing and statuses are hidden):

Step	Name of the stage	Responsible actor	Description
5	Payment of advance payment by the BUYER	BUYER	The BUYER pays an advance payment on the upcoming delivery or service to be provided.
6a	Receipt of the advance payment by the SELLER	SELLER	The SELLER receives the advance payment.

Step	Name of the stage	Responsible actor	Description
1	Creation of the pre-payment invoice already paid to the BUYER.	SELLER	Following payment of an advance payment, the SELLER creates the pre-payment invoice already paid (flow 2) via their information system. They can entrust its creation to an OD/SC (Compatible Solution) or to their PA-E. They send it to their PA-E for processing.
2	Transmission of flow 1, the invoice (flow 2), and the related statuses.	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, it MUST transmit the data required by the Administration (flow 1) to the CdD PPF. It MUST also transmit the invoice (flow 2 or flow 3) to the PA-R of the BUYER. It must send the status "Submitted" to the CdD PPF.
3	Receipt of the advance invoice already paid	PA-R	The BUYER's platform (PA-R) receives the advance invoice that has already been paid (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER for processing.
6b	Issuance of the "Payment Received" status for the advance invoice already paid	SELLER / PA-E	If the VAT on the invoice is payable upon receipt, the SELLER creates the "Payment Received" status and transmits it to the CdD-PPF via its PA-E. The PA-E also transmits the "Received" status to the PA-R for the attention of the BUYER.
6c	Receipt of the "Payment Received" status of the advance invoice already paid by the BUYER	BUYER PA-R	The BUYER receives the "Payment Received" status.
7	Receipt of "Payment Received" status for the pre-payment invoice already paid by the CdD-PPF	CdD PPF	The PPF Data Concentrator (CdD-PPF) receives the "Payment Received" status for the advance invoice already paid.
1	Creation of the final invoice for the BUYER	SELLER	Once the delivery has been made or the service provided, the SELLER creates the final invoice after payment (flow 2) via its information system. It may entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing.
2	Transmission of flow 1, the final invoice (flow 2) and related statuses	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, it MUST transmit the data required by the Administration (flow 1) to the PPF Data Concentrator (CdD PPF). It MUST also send the invoice (flow 2 or flow 3) to the BUYER's PA-R. It must send the status "Submitted" to the CdD PPF.
3	Receipt of the final invoice	PA-R	The BUYER's platform (PA-R) receives the final invoice after payment (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER for processing.
5	Processing of the final invoice and payment of the balance	BUYER	The BUYER processes the invoice and pays it to the SELLER.
6a	Payment receipt for the invoice	SELLER	The SELLER receives payment for the final invoice (off-circuit).

Step	Name of the stage	Responsible actor	Description
6b	Issuance of the "Payment Received" status for the final invoice	SELLER / PA-E	If the VAT on the invoice is payable upon payment receipt, the SELLER creates the "Payment Received" status and transmits it to the CdD PPF via its PA-E. The PA-E also transmits the "Payment Received" status to the PA-R for the attention of the BUYER.
6c	Receipt of the "Payment Received" status of the final invoice by the BUYER	BUYER PA-R	The BUYER receives the "Payment Received" status.
7	Receipt of "Payment Received" status for the final invoice by the CdD PPF	PPF Data Concentrator	The PPF Data Concentrator (CdD PPF) receives the "Payment Received" status for the final invoice.

Figure29: prepayment invoice after advance payment already paid and final invoice

As a reminder, the date of payment of the advance must be indicated on the advance invoice (Article 242 nonies A I 10° of Annex II to the CGI) once it has been determined and if it differs from the date of issue. This information must be mentioned on the invoice and transmitted in a structured format (BT-9 tag may be used, see management rule BR-FR-CO-07 of Standard XP Z12-012). However, even if the due date is entered with the date of payment of the advance payment, a "Received" status MUST also be transmitted to meet the e-reporting payment obligation, where applicable.

NOTE: in some cases, a delivery or service may be subject to one or more progress invoices. In this case, the revenue for the SELLER and the expense for the BUYER are recognized, and the corresponding invoice is not a pre-payment invoice, but a normal commercial invoice.

It is also possible to issue advance invoices that follow a standard process (see diagram below). It is also possible to issue a credit note on an advance invoice or a corrected invoice for an advance invoice, under the same conditions as a "standard" invoice.

Figure30: prepayment invoice and final invoice

BUYER'S OBLIGATIONS:

- **Know how to process the minimum base formats and profiles (invoice and CDAR).**
- **Know how to identify advance invoices and final invoices and process the specific accounting and impact on VAT returns (particularly on the final invoice).**

OBLIGATIONS OF THE BUYER'S PA-E:

- **Know how to process the minimum base formats and profiles (invoice and CDAR).**

SELLER obligations:

- **Know how to process the minimum standard formats and profiles (invoice and CDAR).**
- **Know how to create advance invoices and final invoices.**

SELLER's PA-R obligations:

- **Know how to process the minimum base formats and profiles (invoice and CDAR).**

3.2.20 Case No. 22a: Invoice paid with early payment discount for services for which VAT is payable upon receipt of payment

An early payment discount is an option offered to a customer to pay their invoice sooner than expected in exchange for a reduction in price. The amount of the early payment discount does not appear on the invoice issued; only a note detailing the terms of the early payment discount is included on the invoice.

In the case of services, the administration may take the early payment discount granted into account based on the payment data provided. The "Payment Received" status will indicate the amount actually received, i.e., minus the early payment discount applied (with VAT minus early payment discount).

For deliveries of goods or operators who have opted for debits, as well as early payment discount net of tax, refer to case 22b.

As a reminder, the mention of an early payment discount is mandatory, which means either that no early payment discount has been granted or that the early payment discount conditions are detailed. It is entered in an invoice note (BT-21/BT-22) with:

- Subject code: "AAB";
- Text: early payment discount mention.

The specific features of the life cycle or process are:

- Transmission of flow 1 and e-reporting of payment data via the SELLER's platform;
- The creation of an early payment discount does not require the issuance of a credit note if it is mentioned on the invoice (in the early payment discount conditions, i.e., in the note with subject code "AAB") that the deductible tax is limited to the price actually paid by the BUYER.
- To indicate the application of the early payment discount, the BUYER MAY send a "Payment Transmitted" status comprising 2 MDG-43 blocks:
 - ✓ The first (or several, one per applicable VAT rate if the BUYER wishes to provide this information) indicating the payment with:
 - MDT-207 (Data type code): MPA (meaning "Amount paid").
 - MDT-215 (Amount): the Amount paid (with VAT minus early payment discount applied).
 - MDT-224: applicable VAT rate (optional, only if the BUYER wishes to inform the SELLER of the applicable VAT details in their payment).
 - ✓ The second to indicate the application of the early payment discount:
 - MDT-207 (Data type code): ESC (meaning "early payment discount applied").
 - MDT-215 (Amount): the amount of the early payment discount applied, i.e., unpaid.

The steps in management case No. 22a, illustrated in the diagram below, are as follows:

Step	Step name	Responsible actor	Description
1	Creation of the invoice for the BUYER, with early payment discount terms	SELLER	Following a commercial transaction (order/delivery, service contract, spot purchase, etc.), the SELLER creates the invoice (flow 2) via its information system. It may entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing.
2	Transmission of flow 1, the invoice (flow 2), and related statuses	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, it MUST transmit the data required by the Administration (flow 1) to the CdD PPF. It MUST also transmit the invoice (flow 2 or flow 3) to the PA-R of the BUYER. It must send the status "Submitted" to the CdD PPF.
3	Receipt of the invoice	PA-R	The BUYER's platform (PA-R) receives the invoice (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER for processing.

Step	Step name	Responsible actor	Description
5a 5b	Payment of the invoice with application of the early payment discount Creation and transmission of the "Payment Sent" status	BUYER / PA-R	The BUYER pays the invoice to the SELLER with the early payment discount applied. They can send a "Payment Sent" status to the SELLER via PA-R (recommended). This status can also indicate that the early payment discount has been applied.
5c	Receipt of "Payment Sent" status	SELLER / PA-E	The SELLER receives the "Payment Sent" status from its PA-E
6a	Payment receipt for the invoice	SELLER	The SELLER receives payment for the invoice (outside the circuit).
6b	Issuance of "Payment Received" status	SELLER / PA-E	If the VAT on the invoice is payable upon receipt, the SELLER creates the status "Received" and transmits it to the CdD PPF via its PA-E. The PA-E also transmits the status "Received" to the PA-R for the attention of the BUYER.
6c	Receipt of the "Payment Received" status by the BUYER	BUYER PA-R	The BUYER receives the "Payment Received" status.
7	Receipt of "Payment Received" status by the PPF CdD	PPF Data Concentrator	The PPF Data Concentrator (CdD PPF) receives the "Paid" status. VAT is pre-filled based on the "Payment Received" status, up to the amount actually received (with VAT minus early payment discount).

Figure31: Invoice paid with allowance (case of service provision, VAT due upon receipt)

Obligations of PA-E and PA-R:

- **Know how to process the minimum base formats and profiles (invoice and CDAR).**

SELLER obligations:

- **Transmit a "Received" status for the amount received.**

Obligations of the BUYER:

- **None. They may transmit a "Payment Transmitted" status to accompany the payment and indicate the application of the early payment discount.**

3.2.21 Case No. 22b: Invoice paid with allowance for deliveries of goods (or provision of services with VAT option on debits)

In the case of an early payment discount, when the SELLER has delivered goods or opted to pay VAT on debits for services rendered, the payment details are not transmitted and are not taken into account by the administration. The administration therefore has no way of knowing the early payment discount granted by the SELLER to reduce the pre-filled VAT collected by the same amount.

The SELLER could inform the tax authorities of the application of an early payment discount by issuing a credit note. This is an option, as credit notes for early payment discounts are not provided for in the legislation. This option is available to companies that wish to justify the payment difference following the application of the early payment discount in their accounts (and those of the BUYER), and to allow the VAT collected to be taken into account in the pre-filled forms produced by the tax authorities through credit note flow 1.

As a reminder, the mention of an early payment discount is mandatory, meaning either that no early payment discount has been granted or that the early payment discount conditions are detailed. It is entered in an invoice note (BT-21/BT-22) with:

- Subject code: "AAB";
- Text: early payment discount mention.

The specific features of the associated life cycle or process are:

- Transmission of the invoice (flow 2) mentioning the terms and conditions for applying the allowance early payment discount;
- Transmission of the life cycle (flow 6);
- Transmission of a credit note (flow 2) mentioning the amount of the early payment discount applied.

In the case of a credit note, there are two approaches:

- A credit note with VAT. In this case, the credit note contains the following information:
 - ✓ The invoice type code is credit note (381, 261, etc.)
 - ✓ The invoice to which the early payment discount applies is referenced in BG-3 (previous invoice).
 - ✓ The total without VAT (BT-109) corresponds to the amount of the early payment discount reported without VAT
 - ✓ The total VAT (BT-110) corresponds to the VAT calculated at the rate applicable in the invoice
 - ✓ The total with VAT (BT-112) corresponds to the amount of the early payment discount (with VAT).
 - ✓ If multiple VAT rates apply, the early payment discount credit must normally include the pro-rated VAT amount
- A tax-free credit note is permitted in the case of an early payment discount (tax-free early payment discount). In this case, the credit note contains the following information in particular:
 - ✓ The invoice type code is credit note (381, 261, etc.)
 - ✓ The invoice to which the early payment discount applies is referenced in BG-3 (previous invoice).

- ✓ The total without VAT (BT-109) corresponds to the amount of the early payment discount reported without VAT
- ✓ In VAT breakdown (BG-23),
 - The tax base (BT-116) is equal to the early payment discount amount
 - The VAT type code (BT-118) is "E."
 - The VATEX code (BT-121) is equal to **VATEX-FR-CN WVAT**
 - The VAT amount (BT-117) is equal to 0
- ✓ In foot totals
 - The total without VAT (BT-109) is equal to the early payment discount amount
 - The VAT total (BT-110) is equal to 0
 - The total with VAT (BT-112) is equal to the early payment discount amount

For information, the VATEX-FR-CN WVAT code applies to all types of tax-net credit notes.

The steps in management case no. 22b, illustrated in the diagram below, are as follows:

Step	Step name	Responsible party	Description
1	Creation of the invoice for the BUYER, with early payment discount terms	SELLER	Following a commercial transaction (order/delivery, service contract, spot purchase, etc.), the SELLER creates the invoice (flow 2) via its information system. It may entrust the creation of the invoice to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing.
2	Transmission of flow 1, the invoice (flow 2), and related statuses	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, it MUST transmit the data required by the Administration (flow 1) to the Cdd PPF. It MUST also transmit the invoice (flow 2 or flow 3) to the PA-R of the BUYER. It must send the status "Submitted" to the Cdd PPF.
3	Receipt of the invoice	PA-R	The BUYER's platform (PA-R) receives the invoice (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the invoice available to the BUYER for processing.
5a 5b	Payment of the invoice with application of the early payment discount Creation and transmission of the "Payment transmitted" status	BUYER / PA-R	The BUYER pays the invoice to the SELLER by applying the early payment discount. They can send a "Payment Sent" status to the SELLER via PA-R (recommended). This status can also indicate that the early payment discount has been applied.
5c	Receipt of "Payment Transmitted" status	SELLER / PA-E	The SELLER receives the "Payment Transmitted" status from its PA-E
6a	Payment receipt for the invoice	SELLER	The SELLER receives payment for the invoice (outside the circuit).
1	Creation of the early payment discount CREDIT NOTE (with or without VAT)	SELLER	The SELLER creates a credit note corresponding to the early payment discount, either with applicable VAT or net of VAT with the VATEX code (BT-121) VATEX-FR-CN WVAT

Step	Step name	Responsible party	Description
2	Transmission of flow 1, the early payment discount credit note (flow 2) and the related statuses	PA-E	Once the PA-E has carried out the regulatory compliance checks, including checks for duplicates and the existence of an active electronic invoicing address for the recipient, it MUST transmit the data required by the Administration (flow 1) to the CdD PPF. It MUST also transmit the early payment discount credit note (flow 2 or flow 3) to the BUYER's PA-R. It must transmit the status "Submitted" to the CdD PPF).
3	Receipt of the invoice	PA-R	The BUYER's platform (PA-R) receives the early payment discount credit note (flow 2 or flow 3), performs the regulatory checks, creates the transmission statuses (here "Received," then "Made Available") and makes the early payment discount credit note available to the BUYER for processing.

Figure32: Invoice paid with allowance (case of delivery of goods or provision of services with VAT on debits)

Obligations of PA-E and PA-R:

- **Know how to process the minimum base formats and profiles (invoice and CDAR).**

SELLER obligations:

- **None. They can create a credit note for the amount of the early payment discount, either with VAT or net of tax.**

Obligations of the BUYER:

- **None. They can send a "Payment Sent" status to accompany the payment and indicate that the early payment discount has been applied.**

3.2.22 Case No. 23: Self-billing flow between an individual and a professional

An individual who repeatedly sells or offers services to a professional is engaged in a regular commercial activity and is therefore subject to VAT.

They may not be liable for VAT if they benefit from the basic exemption scheme (Article 293 B of the French General Tax Code), but they are still subject to electronic invoicing.

In most cases, it is the professional who issues the invoice (for example, an energy supplier who is here the BUYER of energy produced by the person subject to the basic exemption scheme). This is therefore a case of self-billing between taxable entities as described in use case 19b of this document.

There is an exception for sales of photovoltaic energy by individuals from a system with a capacity not exceeding 3kWp (see BOI BIC CHAMP 80 30 and BOI-TVA-LIQ-30-20-90-20, § 260). These operators are not subject to VAT and are therefore not covered by e-invoicing or e-reporting.

3.2.23 Case No. 24: Management of Deposit ("Arrhes")

Deposits ("Arrhes") are defined as sums paid as a penalty (Article 1590 of the Civil Code): in this case, the BUYER may cancel the sale and renounce their purchase by forfeiting this sum. If the Deposit constitutes compensation, i.e., it does not constitute payment for a service (no consideration), it is not included in the VAT taxable base.

In commercial matters, sums paid in advance are more often in the nature of a Deposit on the sale price, which the parties cannot withdraw from.

Deposits constitute compensation intended to repair commercial damage. Deposits are outside the scope of VAT; they are not covered by e-invoicing or e-reporting. It is recommended that the nature of this sum be specified in the contract or receipt given to the buyer.

3.2.24 Case No. 25: Management of vouchers and gift cards

This use case is still under discussion and is therefore subject to significant additions.

Gift vouchers and cards may be single-use or multi-use depending on whether, at the time of issue, the place of delivery of the goods or provision of services and the VAT due on those goods or services are known or not.

Examples:

- A card entitling the payee to a certain number of performances in a theater for which the place of taxation and the VAT rate are determined constitutes a single-use voucher.
- A gift card that gives access to various goods or services in a network of stores, for which the place of taxation and the VAT rate are undetermined, constitutes a multi-use voucher.

3.2.24.1 Principle of the single-use voucher (BUU)

Step 1 - Issuance of the voucher:

The sale of a single-use voucher is subject to VAT when, at the time of issue, the place of delivery of the goods or services to which the voucher relates and the related VAT are known (tax base, rate, territoriality). The sale of a single-use voucher is subject to VAT on each transfer, and this VAT is payable under the conditions applicable to the underlying transaction: delivery of goods or provision of services (see Article 269 of the General Tax Code and BOI-TVA - BASE-20-40). Thus, if the underlying transaction related to the BUU constitutes a delivery of goods, VAT will be payable upon the delivery of the voucher, and if the underlying transaction related to the voucher constitutes a provision of services, VAT will be payable upon receipt of the price relating to the purchase of the voucher. The physical delivery of the goods or the actual provision of the services in exchange for a BUU accepted in full or partial consideration by the SELLER or the service provider is not considered a separate transaction.

Each subsequent transfer of the single-use voucher will also be subject to VAT, which will be payable under the same conditions as for the first transfer.

Each transfer of the single-use voucher by a taxable entity will fall within the scope of e-invoicing (sale of gift cards to a taxable entity) or e-reporting (sale to individuals) for the company selling it.

Step 2 - Use of the gift voucher:

The use of the single-use voucher by its payee (voucher holder) in exchange for the delivery of goods or the provision of services is not subject to VAT.

However, when the issuer of the BUU is separate from the service provider or supplier of the services or delivery related to the BUU, the service provider or supplier is deemed to have delivered or supplied the goods or services related to this voucher to the taxable entity and must therefore invoice the issuer for this service (e-invoicing).

In this case, the supplier of the service or delivery of goods sells to the issuer of the BUU, who is therefore the BUYER on this invoice. The issuer of the BUU has in fact sold the service or goods in advance to the recipient of the BUU. If the latter is an entity not subject to tax:

- The BUU Issuer declares its sale of BUU in e-reporting at the time of sale of the BUU.
- The service provider or goods supplier invoices the BUU issuer following its use.
- The BUU Issuer invoices the supplier for its commission or management fees, if applicable.

The VAT relating to this transaction will be payable under the same conditions as the underlying transaction. Thus, when the voucher gives access to a service, VAT will be payable when the supplier invoices the issuer. When the voucher gives access to goods, VAT is payable when the goods are delivered in exchange for the voucher.

When the issuer of the voucher is also the supplier or service provider, the delivery of the voucher in exchange for goods or services to the customer is not subject to VAT, as it is not considered a separate transaction from the sale of the voucher (see step 1).

Commissions or management fees may be incurred throughout the voucher marketing chain and are subject to VAT. They must be invoiced separately, including the relevant VAT. This invoice for commissions or management fees falls within the scope of e-invoicing.

Figure33: Management of single-use vouchers for the provision of services to an individual by a third-party service provider

Obligations of Accredited Platforms («Plateformes Agréées»):

- Know how to process the minimum base formats and profiles (invoice and CDAR), and e-reporting (flow 10).

3.2.24.2 Principles of the multi-use voucher (BUM)

Step 1 - Issuing the multi-use voucher:

The sale of a multi-use voucher is not subject to VAT if, at the time of issue, the place of delivery of the goods or provision of services and the VAT due on those goods or services are not known.

The amounts paid for the purchase of multi-purpose vouchers are outside the scope of VAT and are not subject to electronic invoicing or e-reporting.

Step 2 - Use of the multi-purpose gift voucher:

The use of the multi-purpose voucher by its payee (voucher holder) in exchange for the delivery of goods or the provision of services is subject to VAT. If the payee of the voucher is a private individual, this is a transaction between a taxable entity and a non-taxable entity that falls within the scope of e-reporting.

VAT is payable under the same conditions as the underlying transaction. Thus, the tax is payable on the date of acceptance of the multi-purpose voucher by the supplier in the case of a voucher giving access to goods.

If the multi-purpose voucher gives access to a service for the benefit of its payee (the voucher holder), the tax becomes payable upon receipt of the price of the transaction, i.e., when the reimbursement made by the BUM issuer is received.

When the issuer of the voucher is also the service provider, the redemption of the voucher in exchange for a service will make VAT payable.

Commissions or management fees may be incurred throughout the BUM marketing chain and are subject to VAT. They must be invoiced separately, including the relevant VAT, and this invoicing will fall within the scope of e-invoicing.

Figure34: Management of a Multi-Purpose Voucher for the provision of services to an individual by a third-party supplier

Obligations of Accredited Platforms («Plateformes Agréées») :

- **Know how to process the minimum base formats and profiles (invoice and CDAR), and e-reporting (flow 10).**

3.2.25 Case No. 26: Invoices with contractual reservation clauses

This case corresponds to the sale of services or goods under a contractual reservation clause, which retains part of the price to be paid only if the reservation is lifted.

The service or goods are invoiced in full, with, for example, 95% payable upon submission of the invoice and 5% once the reservation clause has been lifted, if it is lifted. The EN16931 and EXTENDED-CTC-FR profiles do not allow you to enter a payment schedule with an amount under a retention clause. The retention guarantee can therefore only be expressed in a note:

- Subject code (BT-21): ABU
- Text (BT-22): reservation clause

In the case of deliveries of goods or services with the option of paying VAT on debits, VAT is debited, i.e., when the invoice is issued:

- In the absence of e-reporting of payment data, this retention has no impact on VAT until it becomes final.
- The implementation of the retention of guarantee must give rise to a credit note by the SELLER.

Services without the option to pay VAT on debits:

- In this case, only the amounts received are subject to VAT. VAT pre-filling is based on the "Payment Received" status transmitted by the SELLER.
- The SELLER therefore sets a "Received" life cycle status as soon as the initial partial payment is received (e.g., 95%), which will be transmitted to the BUYER and the CdD PPF. If the reservation clause is lifted and as soon as the balance is paid, the SELLER sets a corresponding "Received" life cycle status.
- The implementation of the retention of guarantee shall give rise to a credit note by the SELLER. In this case, it is not necessary to transmit a "Paid" status for the balance or for the credit note.

Obligations of Accredited Platforms («Plateformes Agréées») :

- **Know how to process the minimum base formats and profiles (invoice and CDAR), and e-reporting (flow 10).**

3.2.26 Case No. 27: Management of toll tickets sold to a taxable entity

In principle, toll tickets issued to a taxable entity fall within the scope of electronic invoicing, but there is administrative tolerance regarding them.

Receipts issued at toll booths that mention the following will therefore be considered as documents equivalent to invoices:

- The VAT rate and amount;
- A sequential issue number;
- A space reserved for the user.

As the customer is not known to the taxable SELLER, these transactions may be considered B2C transactions and therefore subject to B2C e-reporting.

This case is handled as follows:

- The SELLER of toll tickets will declare their sales through B2C e-reporting (flow 10.3: daily sales total).
- The administration will thus be able to pre-fill the VAT received from the SELLER but not the VAT deductible by the taxable BUYER.
- Toll machines therefore do not need to be adapted to add information to their receipts.

- The BUYER will be able to process toll receipts for accounting purposes and declare the deductible VAT, which will therefore differ from the pre-filled amount for these services.

If toll services are provided as part of a subscription or credit card scheme enabling the SELLER to identify the BUYER, the service must be invoiced (usually on a monthly basis) and falls within the scope of electronic invoicing.

For other machines (e.g., parking meters), tickets issued to a taxable entity fall within the scope of electronic invoicing. Vending machine solution providers must develop features that allow the taxable BUYER to enter the information necessary to receive an electronic invoice on the vending machine. In the event that the vending machine is not yet up to date when the reform comes into force, given the large number of vending machines in use, the customer will not be known to the SELLER subject to VAT, and these transactions will therefore be treated temporarily as B2C transactions until the machine is updated, and will be subject to B2C e-reporting, following the same process as for toll tickets.

Obligations of Accredited Platforms («Plateformes Agréées») :

- **Know how to process the minimum base formats and profiles (invoice and CDAR), and e-reporting (flow 10).**

3.2.27 Case No. 28: Management of restaurant bills issued by a SELLER subject to tax established in France

In principle, restaurant bills to a taxable entity fall within the scope of electronic invoicing, but there is an administrative tolerance for bills under €150 without VAT:

- Restaurant bills under €150 without VAT may not mention the customer's identification details.
- When the amount of the service is less than €25 and the customer (non-trader) does not request it, the service provider is not obliged to issue an invoice.

To take this tolerance into account, the following solution has been adopted for transactions under €150 without VAT (including those under €25) for which the customer subject to tax does not request an invoice:

- The SELLER (restaurant owner) declares their sale in the B2C e-reporting system (flow 10.3 for sales, by category, and 10.4 for the receipt of service payments), as a daily total of sales and payments received.

If the taxable customer requests an invoice, there are two possible approaches:

- Either the request is made at the time of the transaction AND the SELLER is able to create an invoice and exclude the service from their cash register so that it is not included in their B2C e-reporting, in which case they create the invoice by collecting the BUYER's electronic invoicing address and therefore their SIREN number, which allows them to identify the BUYER. This invoice falls within the scope of e-invoicing.
- Either the request is made after payment of the transaction at the cash register, or it is made at the time of sale but the SELLER is unable to exclude the sale from their cash register system: the SELLER can then create an electronic invoice with a "Cadre de Facturation" (BT-23) equal to S7 or B7, which means that the VAT has already been subject to B2C e-reporting and that the transmitted flow 1 must be used solely for the BUYER's VAT pre-filling; see use case no. 30.

For sales of more than €150 without VAT to a taxable entity, an invoice is mandatory and is subject to e-invoicing if the restaurant owner is a taxable entity established in France.

This invoice may fall under use case 30 (electronic invoice following a sale processed in transaction e-reporting), for example if the sale was recorded in cash register software that led to its inclusion in B2C e-reporting.

Management of a restaurant bill where the customer is **not a taxable entity**:

Figure35: Management of restaurant bills for a non-taxable customer

Management of a note for which the customer is **liable** but is not identified as such at the time of the transaction, or a note for less than €150 without VAT:

Figure36: Transaction data declaration for bills under €150

If the customer requests an invoice after the fact and the restaurant owner reports the sale as B2C, see management case no. 30 (VAT already collected - Transactions initially processed in B2C e-reporting, subject to an invoice after the fact).

NB: if the transaction is corrected directly in the cash register software, do not apply this case and issue a standard invoice with VAT (see below).

Management of a restaurant bill for which the customer is **liable for tax and has expressly requested an invoice**, or restaurant bills exceeding €150 without VAT: this is the nominal case. If the SELLER has already included the sale in their B2C e-reporting (or if they cannot cancel it), they must use a "Cadre de Facturation" (BT-23) 7: S7 or B7 (see use case no. 30).

Figure37: Issuing/transmitting an electronic invoice for bills exceeding €150

Obligations of Accredited Platforms («Plateformes Agréées»):

- **Know how to process the minimum base formats and profiles (invoice and CDAR), and e-reporting (flow 10).**

SELLER requirements:

- **Know how to create a B2B invoice for a restaurant bill, either with a "Cadre de Facturation" (BT-23) equal to S7 or B7 while retaining the sale in e-reporting (flows 10.3 and 10.4), or in another "Cadre de Facturation" after canceling or excluding the sale from the B2C e-reporting circuit.**

3.2.28 Case No. 29: Single Taxable Entity within the meaning of Article 256 C of the CGI

This management case concerns transactions external to the single taxable entity, i.e., transactions between a member of a single taxable entity and a third party to that single taxable entity.

Transactions between members of a single taxable entity are outside the scope of electronic invoicing. They may be exchanged electronically, including between Accredited Platforms («Plateformes Agréées»), but without the flow 1 or "mandatory" statuses being transmitted to the CdD PPF.

As part of the VAT group's compliance in France with VAT Directive 2006/112/EC (already implemented in 20 Member States of the European Union), a VAT identifier and a SIREN number will be created for the single taxable entity, who becomes solely liable for VAT for all of its members. These two identifiers must be indicated, where applicable, on all sales invoices issued by members of the single taxable entity, in addition to their own identifiers.

For sales invoices issued by a member of a single taxable entity:

- The data relating to the member of the single taxable entity itself must appear in the SELLER block (BG-4).
- The data relating to the single taxable entity must be entered as follows:
 - ✓ The taxable entity's SIREN number: in BT-29 (private SELLER identifier) with scheme identifier (BT-29-1) equal to 0231;

- ✓ In the absence of a block dedicated to the single taxable entity in the EN16931 standard to date, data relating to the single taxable entity other than the SIREN number, namely the company name, intra-community VAT number, and postal address, must be included in the SELLER'S TAX REPRESENTATIVE block (BG-11).
- The mention "MEMBRE_ASSUJETTI_UNIQUE" (SINGLE TAXABLE ENTITY MEMBER) must be included in a note in BT-22, with a subject code TXD in BT-21.

Members of a Single Taxable Entity, although no longer subject to VAT themselves, remain subject to the obligation to receive electronic invoices issued by VAT taxable entities established in France. To do so, they will be listed in the PPF Directory («Annuaire») and will be able to create electronic invoicing addresses for receiving invoices and will have to use an Accredited Platform to receive these invoices. The pre-filling of VAT information relating to the receipt of invoices by members of a Single Taxable Entity (deductibility for "traditional" invoices and payment receipt for self-billed invoices) will be done as part of the Single Taxable Entity's VAT return.

With regard to e-reporting, as a reminder, each taxable entity is required to submit one 10 flow per e-reporting period and per type (one for international B2C and B2B sales, one for international acquisitions, and one for receipts).

However, in the case of Single Taxable Entities, for both international B2C and B2B sales, international B2B sales, as well as for international acquisitions and the associated required payment data, it will be permitted to provide 10 flows per member of the Single Taxable Entity, and not just a total for all members of the Single Taxable Entity, even if these 10 flows are transmitted by the same Accredited Platforms («Plateformes Agréées») for different members of the Single Taxable Entity.

3.2.29 Case No. 30: VAT already collected - Transactions initially processed in B2C e-reporting, subject to a retrospective invoice

This management case illustrates the management of transactions between taxable entities subject to e-invoicing that have been e-reported (B2C), for example because they have been recorded in software or a cash register system that is the source of the e-reporting of transactions (B2C), and which must therefore be subject to an electronic invoice exchanged between Accredited Platforms («Plateformes Agréées») and producing a flow 1, thus resulting in double VAT accounting (through flow 1 of the invoice AND flows 10.3 and 10.4 of e-reporting of transactions).

It therefore applies to all cases where the transaction is recorded in a cash register, is subject to B2C e-reporting, and is then subject to an electronic invoice at the customer's request. It can be used in particular in the case of restaurant bills that are subject to a subsequent invoice.

However, if the error is corrected in the cash register software and is not subject to prior B2C e-reporting, the invoice follows the standard electronic invoicing process.

Example:

A floral decorator provides both services (event manager) and sells goods (plants) to B2B (hotels) and B2C (individuals) customers. They record their transactions using cash register software or a cash register system. They are subject to electronic invoicing for their B2B transactions and e-reporting for their B2C transactions. For the latter, they transmit their transaction and payment data at frequency F.

Step 1 – Accounting for the B2C transaction:

The floral decorator carries out a B2C transaction paid for in cash. The Z-ticket from their day's work refers to all the transactions carried out that day. The floral decorator transmits its cumulative transaction data via an e-reporting flow (flow 10.3) and, if it has not opted to pay VAT on debits, an e-reporting payment flow (flow 10.4) for the services provided, for each day of the e-reporting period.

Step 2 - Issuing a B2B invoice:

One of its customers is a business and requests an invoice in order to exercise the right to deduct VAT on the transaction.

The floral designer then issues an electronic invoice. To avoid double counting the pre-tax amount and VAT, this invoice must mention the corresponding "Cadre de Facturation" created for this purpose, **"VAT already collected," entered in BT-23 with the values S7 or B7**. This "Cadre de Facturation" allows the corresponding invoice data (flow 1) to be transmitted to the tax authorities, indicating that it has already been transmitted via e-reporting (flows 10.3

and 10.4), thus making it possible to determine the customer's deductible VAT while avoiding double counting of turnover and VAT collected for the merchant.

The specific features of the data and associated management rules are:

- Business process type (billing framework – “Cadre de Facturation”) (BT-23): B7/S7, meaning "VAT already collected".
- **VAT accounting and reporting:** the SELLER must ensure that the sale is not accounted for twice (once through the accounting reported by the cash register software and once through the accounting of the invoice).

The specific features of the transmission of invoicing/transaction and payment data are:

- Transmission of an e-report of cumulative transaction data (flow 10.3) and payment data (flow 10.4), if applicable, recorded by the cash register software.
- Transmission of the invoice with the "VAT already collected" "Cadre de Facturation" (flow 2)

NOTE: The "VAT already collected" "Cadre de Facturation" (B7/S7) can be used in other situations, particularly for invoices to be issued when VAT has been declared by a company on its VAT return for the period due and the invoice is issued subsequently. In this situation, using Invoicing Box 7 (B7/S7) will mean that flow 1 of the invoice is not taken into account for the SELLER's VAT pre-filling (VAT collected), but is taken into account for the BUYER's VAT pre-filling (VAT deductible). Thus, the SELLER's VAT pre-fill will not be duplicated since it will already have been pre-calculated through B2C e-reporting.

Figure38: Electronic invoice management following a sale that has been subject to e-reporting of the transaction (B2C)

Obligations of Accredited Platforms («Plateformes Agréées»):

- Know how to process the minimum base formats and profiles (invoice and CDAR), and e-reporting (flow 10).

SELLER obligations:

- Know how to create a B2B invoice with a "Cadre de Facturation" (BT-23) equal to S7 or B7 while retaining the sale in e-reporting (flows 10.3 and 10.4).
- Ensure that the sale and VAT collected are not recorded twice, for example by making a correction entry for B2C sales due to the invoice being recorded with the "VAT already collected" "Cadre de Facturation".

3.2.30 Case No. 31: "Mixed" invoices mentioning a main transaction and an ancillary transaction

This case illustrates the management of "mixed" invoices/transactions or "single complex transactions" (involving several categories of transactions, one of which is ancillary to the other). The transaction category is either a supply of goods or a supply of services.

In accordance with II of Article 257 *ter* of the CGI, these are activities whose elements are so closely linked that they objectively form a single, inseparable economic service, the breakdown of which would be artificial.

Principle:

In the event that an invoice mentions two transactions: a first transaction considered to be the main transaction, and a second transaction considered to be secondary (associated with the main transaction). The terms and conditions for transmitting invoicing/transmission and payment data for these two transactions are then determined by the category of the main transaction. Payment data must only be transmitted for transactions falling within the category of services in order to determine the VAT base.

For sales to entities not subject to VAT established in France that are subject to e-reporting of transactions (flows 10.3 and 10.4), it is up to the SELLER to define the category of the transaction, delivery of goods or provision of services, for the transmission of transaction data. It is therefore the category of the main transaction that will be chosen for the secondary transactions attached to it.

If the sale covered by e-reporting includes transactions involving the delivery of goods and independent services, then the e-reporting of transactions must separate them by combining, on the one hand, sales corresponding to the category "delivery of goods" and, on the other hand, sales corresponding to the category "provision of services."

For sales covered by e-invoicing, the category is indicated in the Billing Framework (BT-23 : "Cadre de Facturation") by the first character:

- B: delivery of goods
- S: provision of services
- M: invoice that includes separate lines for the delivery of goods and the provision of services (i.e., that cannot be classified as secondary to either goods or services).

Example:

A clothing store offers a tailor-made alteration service in addition to selling its products. Transactions are carried out in cash with immediate payment. They are recorded using software or a cash register system.

Payment data must be transmitted for transactions falling under the category of "Services" in order to determine the VAT base:

- If, following its sale, a product needs to be altered, the alteration is considered ancillary to the sale. This service is therefore considered to fall under the category of "Delivery of Goods." It will therefore not be subject to e-reporting of payment.
- If a customer wishes to have a garment altered (purchased as part of another transaction), then this alteration will be considered as the main transaction and therefore falls under the category of "Services."

It must therefore be reported in an e-reporting payment declaration for the amount of the services invoiced (excluding the option to pay VAT on debits).

Case 1: the alteration is associated with the sale of a suit. The main transaction is a delivery of goods.

Figure39: Mixed invoice with main and ancillary transactions categorized as a sale (case of an alteration on sale)

Case 2: the alteration is the main transaction (with or without an ancillary sale). The transaction is a service provision. If goods are sold at the same time, it is a mixed sale. In e-reporting, sales in the "Delivery of Goods" category must be separated from those in the "Provision of Services" category

Figure 40: E-reporting sale of transaction with INDEPENDENT Provision of Services AND Delivery of Goods

The specific features of transaction and payment data transmission are:

- Transmission of e-reporting of cumulative transaction data (flow 10.3) recorded by the cash register software, by category of transaction performed (see G1.68 of the external specifications, Annex 7):

- ✓ TT-77: Date of the cumulative amount subject to e-reporting (10.3)
- ✓ TT-78: Currency code
- ✓ TT-80: VAT payment option (if option for debits for sales of services)
- ✓ TT-81 (Transaction category):
 - TLB1: Deliveries of goods subject to value added tax;
 - TPS1: Provision of services subject to value added tax;
 - TNT1: Deliveries of goods and services not subject to value added tax in France, including intra-Community distance sales referred to in 1° of I of Article 258 A and Article 259 B of the General Tax Code;
 - TMA1: Transactions subject to the regimes provided for in e) of 1 of Article 266 and Articles 268 and 297 A of the General Tax Code (VAT margin scheme).
- ✓ TT-82: Daily cumulative amount without VAT in the currency specified in TT-78
- ✓ TT-83: VAT amount of the daily total in euros
- ✓ TT-85: number of transactions, i.e., sales for the category designated in TT-81. Consequently, when a sale is both a sale of goods and a provision of services, it counts as one transaction in each of the two categories. THIS INFORMATION IS NO LONGER REQUIRED.
- ✓ TG-32: provides the VAT details for this daily total, by applicable VAT rate
 - TT-86: VAT rate
 - TT-87: Base without VAT, in the currency in TT-78
 - TT-88: VAT amount in EUROS
- Transmission of an e-report containing cumulative payment data (10.4) recorded by the cash register software for transactions falling within the category of services (TPS1) only.

Point of attention no. 1: A distinction must be made between

- invoices containing lines for the delivery of goods and lines for the provision of services, the former being ancillary to the latter, which makes them either invoices for the delivery of goods or for the provision of services,
- invoices containing lines for the delivery of goods and lines for INDEPENDENT services are referred to as "dual" invoices and are subject to a "Cadre de Facturation" (BT-23) beginning with an "M."

Although a category of dual transactions is included among the mandatory data to be transmitted to the administration to take into account operators' practices (Billing Framework "Cadre de Facturation" (BT-23) beginning with "M"), **it is recommended, insofar as possible, to issue separate invoices** for deliveries of goods and services, given the different rules on when they become chargeable, in order to identify which transactions the e-reporting of payments relates to.

Point of attention no. 2: Opting for debits **does not exempt you** from distinguishing between transactions for the delivery of goods and transactions for the provision of services. However, it does mean that you do not have to submit e-payment reports.

Point to note #3: This case should also be distinguished from the sale of "packages" comprising items subject to a separate VAT regime. For example, a toy book consists of a book subject to 10% VAT and a toy subject to 20% VAT. For the current EN16931 and EXTENDED-CTC-FR profiles, two separate invoice lines will be required in this case.

3.2.31 Case No. 32: Monthly payments

This use case is still under discussion and is therefore subject to further additions.

This management case illustrates the procedures for transmitting payment data relating to monthly payments made before an invoice is issued.

Firstly, in B2B, if these are advance payments, they must be invoiced as advance payments, with VAT and e-reporting of payment if they relate to services (flow 6). The final invoice can include the advance payments as negative lines (see cases 20 and 21) to show the balance and retain any residual VAT.

If they are consumption estimates, they must also be invoiced commercially, resulting in recognition as revenue for the SELLER and as expenses for the BUYER.

In the case of B2C sales, or in the absence of invoices, these monthly payments must be declared via an e-reporting transaction (corresponding to a delivery of goods or a service subject to VAT) supplemented by an e-reporting payment if required.

When issuing the invoice:

- In the case of a B2C invoice, only the balance will be declared in the e-reporting of transactions (10.3, 10.4). It is necessary to determine how to handle a negative balance.
- If it is a B2B invoice, which would mean that the BUYER would then have reported themselves as VAT-registered to the SELLER, who would have been unaware of this until now, it is necessary to:
 - ✓ Cancel the e-reporting carried out for the various monthly payments by deducting them from one of the daily records of flow 10.3 and, if necessary, flow 10.4, preferably on the invoice date.
 - ✓ The amount already received should be entered in BT-113 of the invoice so that the net amount payable (BT-115) corresponds to the balance due, even if it is negative.
 - ✓ The invoice should be sent as any other invoice and will result in a flow 1 containing the full amount of VAT, of which the portion already received will be offset by the e-reporting on the above transaction.
 - ✓ In the case of an international B2B invoice, flow 10.1 must be produced in the same way, with the same consequences.

Example: Illustration of a B2C use case

An energy supplier offers its residential customers the option of paying monthly based on an estimate of their annual consumption. At the end of the year, the energy supplier issues an adjustment invoice, the amount of which is calculated based on the actual consumption of each of its customers.

Case 1a: the SELLER has not opted for option on debits and the adjustment invoice shows an outstanding balance:

Figure41: Monthly payments and additional amount payable in a B2C context, no direct debit option (option 1a)

The specific features of invoicing/transaction and payment data transmission are:

- Transmission of an e-reporting of cumulative data for the transaction period (flow 10.3) and payments (flow 10.4) relating to monthly payments received, if applicable;
- Issuance of an adjustment invoice with the additional amounts to be paid to the customer, the total amount without VAT and VAT, and a reminder of the monthly payments already made. The adjustment invoice may be an invoice with negative amounts;
- At the same time, transmission of a **net e-report** equal to the amount of the adjustment invoice minus the recovery of advance payments;
- Transmission of payment data (flow 10.4) including the amount received corresponding to the net amount of the adjustment invoice.

Case 1b: The SELLER has opted for debits and the adjustment invoice shows a balance due.

Figure42: Monthly payments in the context of a B2C sale, option for debits and additional amount to be paid (case 1b)

The specific features of the transmission of invoicing/transaction and payment data are:

- Transmission of an e-report containing cumulative data for the transaction period (flow 10.3) relating to monthly payments received, where applicable;
- Issuance of an adjustment invoice with the additional amounts to be paid to the customer, the total amount without VAT and VAT, and a reminder of the monthly payments already made. The adjustment invoice may be an invoice with negative amounts;
- At the same time, transmission of a net e-report equal to the amount of the adjustment invoice minus the recovery of advance payments.

The ruling published on June 5, 2025 (BOI-RES-RVA-000209-20250605) specifies that monthly payments received from individuals (B2C) must be considered as advance payments and that, pursuant to the first paragraph of 2.a of Article 269 of the CGI, VAT becomes chargeable upon receipt of each advance payment, up to the amount received, and upon completion of the consumption period covered by the invoice, up to the amount adjusted, in the amount received, and at the end of the consumption period covered by the invoice, in the amount adjusted.

The draft finance bill for 2026 provides that "I. – Data relating to the payment of transactions referred to in Articles 289 bis and 290 for which tax is payable upon receipt pursuant to Article 269(2) and Article 298 bis(I)(2), with the exception of those for which tax is payable by the buyer, shall be communicated to the administration in electronic form, in accordance with the transmission standards defined by order of the Minister responsible for the budget, by the Accredited Platform chosen by the taxable entity.

It is therefore up to each company to determine, based on its situation, whether or not its transaction is subject to VAT on receipt and to draw the appropriate conclusions regarding the transmission of a 10.4 flow, including in the case of an option on debits.

Case 2a: The SELLER has not opted for debits AND the adjustment invoice shows an overpayment:

Figure43: Monthly payments and final overpayment in a B2C transaction, no option for debits (option 2a)

The specific features of the transmission of invoicing/transaction and payment data are:

- Transmission of an e-reporting of cumulative transaction data (flow 10.3) and payments (flow 10.4) relating to monthly payments received;

- Issuance of an adjustment invoice to the customer indicating actual consumption and the total amounts without VAT and VAT. The adjustment invoice may be an invoice with negative amounts;
- At the same time, transmission of a **negative** net e-report equal to the amount of the adjustment invoice minus the recovery of advance payments;
- Transmission of payment data (flow 10.4) including the amount paid (i.e., negative) corresponding to the overpayment appearing on the adjustment invoice.

Case 2b: The SELLER has opted for debits AND the adjustment invoice shows an overpayment:

If the supplier has opted for VAT payment on debits: the adjustment invoice showing the overpayment as a negative amount will be taken into account. No payment data will be transmitted despite the overpayment.

The specific features of the transmission of invoicing/transaction data are:

- Transmission of an e-reporting of cumulative transaction data (flow 10.3) relating to monthly payments received;
- Issuance of an adjustment invoice to the customer. The adjustment invoice may be an invoice with negative amounts.
- At the same time, transmission of a negative net e-report equal to the amount of the adjustment invoice minus the recovery of advance payments;

Once the supplier has opted to pay VAT on debits, they do not have to transmit payment data, unlike in case 2a.

Figure44: Monthly payments and final overpayment in a B2C transaction, option for debits (case 2b)

The ruling published on June 5, 2025 (BOI-RES-RVA-000209-20250605) specifies that monthly payments received from individuals (B2C) must be considered as advance payments and that, pursuant to the first paragraph of 2.a of

Article 269 of the CGI, VAT becomes payable upon receipt of each advance payment, in the amount received, and at the end of the consumption period covered by the invoice, in the amount adjusted.

The draft finance bill for 2026 provides that "I. – Data relating to the payment of transactions referred to in Articles 289 bis and 290 for which tax is payable upon receipt pursuant to Article 269(2) and Article 298 bis(1)(2), with the exception of those for which tax is payable by the buyer, shall be communicated to the administration in electronic form, in accordance with the transmission standards defined by order of the Minister responsible for the budget, by the Accredited Platform chosen by the taxable entity.

It is therefore up to each company to determine, based on its situation, whether or not its transaction is subject to VAT on receipt of payment and to draw the appropriate conclusions regarding the transmission of a 10.4 flow, including in the case of an option on debits.

Obligations of Accredited Platforms («Plateformes Agréées») :

- **Know how to process minimum base formats and profiles (invoices and CDAR), and e-reporting (flow 10).**

3.2.32 Case No. 33: Transactions subject to the margin scheme -profit

VAT on the margin is not calculated on the sale price, but on the **difference between the sale price and the purchase price**. The amount of VAT on the margin is not shown on the invoice, which poses a difficulty in e-invoicing.

The VAT margin scheme applies to transactions referred to in **Article 266(1)(e)** [travel agencies and tour operators] and Articles **268** [building land] and **297 A** [second-hand goods, works of art, collectors' items or antiques] of the General Tax Code.

3.2.32.1 Example 1: A travel agency invoices a taxable entity for a single service for the organization of a seminar (flight – hotels – rooms).

Figure45: Transactions subject to the margin scheme, B2B invoice subject to e-invoicing

The specific data and management rules applicable to e-invoicing are as follows:

- For lines subject to the margin scheme (as there may be sales subject to the margin scheme and others not subject to the margin scheme):
 - ✓ all amounts (BT-131) and unit prices (BT-146, BT-147, BT-148) are inclusive of tax
 - ✓ the VAT Type Code (BT-151) is "E"
- For VAT breakdown data (BG-23) subject to the margin scheme
 - ✓ VAT Type Code (BT 118): "E".
 - ✓ VAT exemption reason code (BT-121):
 - VATEX-EU-F: second-hand sale
 - VATEX-EU-I: sale of works of art
 - VATEX-EU-J: sale of antiques
 - VATEX-EU-D: Travel agency sales
 - ✓ Base without VAT (BT-116): the sum of the line amounts (in practice, the total with VAT).
 - ✓ VAT rate (BT-119): equal to 0.
 - ✓ VAT amount in VAT breakdown (BT-117): 0
- For total data:
 - ✓ Total without VAT (BT-109): the sum of the line amounts (BT-131), document-level charges, minus document-level allowances. In practice, this is also a total with VAT for lines subject to margin and a total without VAT for the other lines.
 - ✓ Total VAT (BT-110): 0, if there are only lines subject to margin.
 - ✓ Total with VAT (BT-112): equal to BT-109 if there are only margin lines.

There are no specific requirements for the transmission of invoicing and payment data, namely:

- Transmission of the invoice (flow 2), with flow 1 transmitted to the CdD PPF;
- Transmission of the "Paid" status of the invoice life cycle (flow 6), if applicable.

However, this means that flow 1 will not contain the VAT corresponding to the lines relating to the margin. The pre-filled VAT will therefore be incorrect because it will not be able to calculate the VAT on the margin. The SELLER therefore declares the VAT on the margin in their VAT return (CA3 / CA12) and notes a discrepancy with the pre-filled VAT.

3.2.32.2 Example 2: A travel agency invoices a flight + hotel to an individual.

In this case, the SELLER must submit an e-reporting transaction (flow 10.3) and an e-reporting payment (flow 10.4), unless they have opted for debits. They are then required to e-report the pre-tax base of the margin and the VAT actually due:

- TT-77: Date of the cumulative amount subject to e-reporting (10.3).
- TT-78: Currency code in which all amounts in the record (TG-31) will be expressed, except for the VAT amount (TT-83, which MUST be in EUROS. For activities in France, this currency is generally the EURO).
- TT-80: VAT payment option (if option for debits for sales of services).
- TT-81 (Transaction category): **TMA1**: Transactions subject to the rules set out in Article 266(1)(e) and Articles 268 and 297 A of the French General Tax Code (VAT margin scheme).
- TT-82: Amount of the pre-tax margin base on which VAT is calculated (sale price – purchase price), daily total in the currency specified in TT-78. If the SELLER is unable to determine its margin in real time, an amount corresponding to an average margin rate estimated by the company is accepted.
- TT-83: VAT amount of the daily cumulative margin in euros.
- TG-32: provides VAT details for this daily total, by applicable VAT rate.
 - ✓ TT-86: VAT rate.

- ✓ TT-87: Pre-tax basis of the daily cumulative profit margin to which the VAT rate in TT-86 applies. If the SELLER is unable to determine its margin in real time, this is the portion of the estimated average margin subject to the VAT rate indicated in TT-86.
- ✓ TT-88: VAT amount in euros.

PLEASE NOTE: the number of transactions per category is no longer required. However, the TT-84 data remains in flow 10.3, as an option for companies that wish to provide it.

PLEASE NOTE: unlike e-invoicing, e-reporting requires the transmission of the profit margin and the VAT actually collected. VAT pre-filling can therefore be carried out. The difficulty lies in the SELLER's ability to know their profit margin per sale or per day (and per applicable VAT rate). If the operator does not know their margin per sale per day, they can use an average margin rate. In this case, the VAT pre-filling will not be accurate. The SELLER will have to file their VAT return with the exact profit margin calculation. If the SELLER issues an electronic invoice, it follows the same rules as example 1 above.

3.2.32.3 Exception: How to report the pre-tax profit margin and the corresponding VAT on a B2B invoice issued by travel agencies and tour operators or related to building lots

It may be necessary or desirable to indicate the VAT on the profit margin in certain cases, for transactions covered by Article 266(1)(e) [travel agencies and tour operators] and Article 268 [building lots]. Indeed, in these situations, when VAT on the profit margin is included in the invoice, the taxable person may exercise their right to deduct the corresponding VAT (see Article 360 of BOI-TVA-SECT-60 for travel agencies and tour operators).

The EN16931 standard applies VAT to the pre-tax base, which is the sum of the pre-tax bases for lines in the same category and with the same VAT rate. It therefore does not allow for distinguishing another base—namely, the profit margin—to which VAT is applied.

To address this need, two options are available:

- Option 1: Use a note to indicate the profit margin. This is free-form text that cannot be easily processed automatically. The subject code (BT-21) MUST be set to AVE (designated for text regarding the profit margin).
- Option 2: Display the margin using two additional lines, which then allows the profit margin and the corresponding VAT to be identified in the VAT footer. For example, on an invoice for €300 including tax with a profit margin of €100 and a 20% VAT rate (resulting in a profit margin of €120 including tax):
 - ✓ Line item for a service generating a profit margin:
 - BT-153 (item name): the name of the item
 - BT-154: the description of the service sold
 - BT-146 (net unit price): 300
 - BT-129 (invoiced quantity): 1,
 - BT-151 (VAT type code): E
 - BT-152 (VAT rate): 0
 - EXT-FR-FE-179 (exemption reason code): VATEX-EU-D (for travel agencies)
 - EXT-FR-FE-178 (exemption reason in text): « Régime particulier – Agences de voyage » (“Special regime – Travel agencies”)
 - ✓ Profit margin adjustment line:
 - BT-153 (item name): “REPRISE MARGE BENEFICIAIRE TTC “ (“PROFIT MARGIN ADJUSTMENT (INCL. TAX)”)
 - BT-146 (net unit price): only the amount of the profit margin (incl. tax): 120
 - BT-129 (invoiced quantity): -1,
 - BT-151 (VAT type code): E
 - BT-152 (VAT rate): 0
 - EXT-FR-FE-179 (exemption reason code): VATEX-EU-D (for travel agencies)
 - EXT-FR-FE-178 (exemption reason in text): « Régime particulier – Agences de voyage » (“Special regime – Travel agencies”)
 - ✓ Profit margin identification line:
 - BT-153 (item name): « MARGE BENEFICIAIRE HT » (“PROFIT MARGIN EXCL. TAX”)

- BT-146 (net unit price): only the amount of the profit margin excl. tax: 100
- BT-129 (invoiced quantity): 1,
- BT-151 (VAT type code): S
- BT-152 (VAT rate): 20
- EXT-FR-FE-179 (exemption reason code): none or "VATEX-EU-D" (for travel agencies). Ideally, a VATEX code identifying this as a profit margin basis would be useful (to be completed if necessary).
- EXT-FR-FE-178 (exemption reason in text): « Régime particulier – Agences de voyage – MARGE BENEFICIAIRE » ("Special regime – Travel agencies – PROFIT MARGIN")
- ✓ VAT breakdown (BG-23) for the Profit Margin portion including tax (which in practice is a 0 margin):
 - BT-118 (VAT type code): E
 - BT-119 (VAT rate): 0
 - BT-121 (exemption reason code): VATEX-EU-D
 - BT-120 (exemption reason in text): « Régime particulier – Agences de voyage » ("Special regime – Travel agencies")
 - BT-116 (tax base): 180 (300 from the line – 120 from "PROFIT MARGIN INCLUDING TAX")
 - BT-117 (VAT amount): 0
- ✓ VAT breakdown (BG-23) for the Profit Margin Excl. VAT section (which shows the profit margin and its VAT):
 - BT-119 (VAT rate): 20
 - BT-121 (exemption reason code): none or "VATEX-EU-D" (for travel agencies), same as the "PROFIT MARGIN EXCL. VAT" line
 - BT-120 (exemption reason in text): « Régime particulier – Agences de voyage – MARGE BENEFICIAIRE » ("Special regime – Travel agencies – PROFIT MARGIN")
 - BT-116 (tax base): 100
 - BT-117 (VAT amount): 20
- ✓ Totals
 - BT-109 (Total Excl. Tax): 280 (180 + 100)
 - BT-110 (VAT amount): 20
 - BT-112 (total including VAT): 300

This second option, which allows for a structured breakdown of the profit margin, makes use of the ability to specify the grounds for exemption as provided for in the Revision of Standard EN 16931 (which becomes a "VAT exemption specification or reason code") even in cases where VAT applies (VAT type code = S), as well as in the rules for verifying VAT breakdowns. It therefore requires the use of the EXTENDED-CTC-FR profile (or Factur-X's EXTENDED profile), which has proactively incorporated these upcoming capabilities from the Revision of the EN 16931 standard.

Illustration:

Lines											
Line ID	Item name	Net Unit Price	Invoiced Quantity	Unit of measure	Attribute name	Attribute value	VAT Category	VAT rate	VATEX code	VATEX text	Line total amount
BT-126	BT-153	BT-146	BT-129	BT-130	BT-160	BT-161	BT-151	BT-152	EXT-FR-FE-179	EXT-FR-FE-178	BT-131
1	Article 1	160,00	1,00	C62			E	0,00%	VATEX-EU-D	Régime particulier – Agences de voyage	160,00
2	Article 2	35,00	4,00	C62			E	0,00%	VATEX-EU-D	Régime particulier – Agences de voyage	140,00
10	REPRISE MARGE BENEFICIAIRE TTC	120,00	-1,00	C62			E	0,00%	VATEX-EU-D	Régime particulier – Agences de voyage	-120,00
11	MARGE BENEFICIAIRE HT	100,00	1,00	C62			S	20,00%	VATEX-EU-D	Régime particulier – Agences de voyage – MARGE BENEFICIAIRE	100,00

VAT Breakdown						TOTAUX	
Base	VATEX text	VATEX code	VAT code	VAT rate	VAT amount		
BT-116	BT-120	BT-121	BT-118	BT-119	BT-117	Total LINES (BT-106)	280,00
180,00	Régime particulier – Agences de voyage	VATEX-EU-D	E	0,00%	0,00	Total Allowances (BT-107)	0,00
						Total Charges & taxes (BT-108)	0,00
100,00	Régime particulier – Agences de voyage – MARGE BENEFICIAIRE	VATEX-EU-D	S	20,00%	20,00	Total without VAT (BT-109)	280,00
						Total VAT (BT-110)	20,00
						Total with VAT (BT-112)	300,00

Figure 46: Sample invoice showing the profit margin and the corresponding VAT.

NOTE:

- Option 1 allows you to provide the pre-tax profit margin and the associated VAT amount on the invoice for the BUYER, but as free-form text and without necessarily including it in Data Stream 1 (see BR-FR-MAP-04 of the XP Z12-012 standard).
- Option 2 allows the pre-tax profit margin and its corresponding VAT to be presented in a structured format for the BUYER, which is also transmitted to the PPF Data Concentrator in the resulting data stream 1 or 10.1.

Obligations of Accredited Platforms («Plateformes Agréées»):

- **Know how to process the minimum base formats and profiles (invoice and CDAR), and e-reporting (flow 10).**

SELLER obligations:

- **Determine their profit margin on sales covered by e-invoicing for their VAT return.**
- **Have the daily profit margin for its B2C sales, if necessary by applying an average margin rate.**

3.2.33 Case No. 34: Partial payment receipt and cancellation of payment receipt

Each partial payment (in the case of an advance payment, for example) must be declared with a life cycle flow bearing the status "Payment Received." The "amount" field will show the amount paid.

In the event of a payment cancellation following a reconciliation error or fraudulent payment (misappropriation, theft, hacking, etc.), it will be possible to issue a life cycle with the status "Received" and a negative amount (amount field).

In the event of a payment receipt that cannot be reconciled with its invoice before the e-reporting date, a B2C payment receipt should be declared with the most likely VAT details (flow 10.4), then, once the reconciliation has been carried out, perform e-reporting of the negative B2C payment (flow 10.4 canceling the previous one) and e-reporting of the payment following reconciliation (flow 2 for invoices subject to e-invoicing, flow 10.2 for international B2B sales invoices).

3.2.34 Case No. 35: Author's notes

This use case is still under discussion and is therefore subject to further developments.

OPERATIONS PERFORMED BY THE AUTHOR	PAYING INSTITUTION	APPLICABLE MECHANISM (EI / ER)
Receipt of copyright royalties	Publishers, copyright royalty receipt and distribution societies, or producers.	Gives rise to VAT withholding by the payer * E-reporting by the paying institution (no invoice but a statement of royalties payable to the author)
Receipt of copyright royalties	Other than publishers, copyright royalty receipt and distribution societies, or producers.	Does not give rise to VAT withholding by the payer E-invoicing by the author (invoice issued by the author) if the customer is B or G E-reporting if the customer is C (e.g., non-taxable association).
Other transactions not subject to withholding	-	E-invoicing by the author (invoice issued by the author) if customer B/G E-reporting by the author if customer C.

(*) Amount declared on the VAT return of the establishment that withheld VAT.

The specific features are as follows:

- **Statements of duties** are not covered by e-invoicing.
- Transactions giving rise to VAT withholding by publishers, rights payment and distribution companies, and producers fall within the scope of e-reporting for these companies. There is therefore no need to create a dedicated "Cadre de Facturation".
- For **copyrights** that are **not paid by these organizations**, **authors** are liable for VAT, unless they benefit from the basic exemption scheme, and are subject, like any taxable entity, to **e-invoicing/e-reporting** obligations depending on whether or not their customer is a taxable entity.
- For **transactions other than copyright**, authors remain subject to the common law regime and may fall within the scope of **e-invoicing** or **e-reporting**.

The case of author's notes is presented in order to clarify the application of electronic invoicing and e-reporting to this use case. No additional obligations beyond the provisions of Article 285 *bis* of the CGI are envisaged.

3.2.35 Case No. 36: Transactions subject to professional secrecy and exchanges of sensitive data

In order to comply with transactions subject to professional secrecy (see Article 226-13 of the Penal Code - in particular banking secrecy Article L. 511-33 of the Monetary and Financial Code or business secrecy Article L. 151-1 of the Commercial Code) as well as sensitive data covered by Ministerial Instruction No. 900/ARM/CAB/NP of March 15, 2021, the operators concerned may use a generic description of the precise name of the goods or services provided, which must be mentioned in the "item name" field (BT-153) of flows 2 and 1.

However, in order to meet their obligations to their customers, they must specify the transaction carried out. This information may be transmitted via tag BT-154 (item description) in flow 2, thus allowing both parties to the transaction to have details of it. Only the parties mentioned on the invoice will have access to this field, which is only present in stream 2. There is also other line data that can be used to define the service, references, attributes, etc., which are not transmitted in stream 1 and therefore remain confidential between the SELLER and the BUYER.

Only field BT-153 (item name), which contains very general information, will be transmitted to the tax authorities.

NOTE: In general, special attention should be paid to personal data (GDPR) contained in an invoice, even if it is not transmitted to the tax authorities.

3.2.36 Case No. 37: SEP (Sociétés en Participation)

In order to carry out certain projects for an end buyer, several service providers may join forces in a joint response and thus form a Temporary Business Group (Groupement Momentané d'Entreprises: GME). The GME may decide to organize its relations between the members of the group through a Joint Venture.

Joint ventures, also known as "SEPs," are secret companies created for the purpose of carrying out a project. The members of the SEP are partners in the project. The SEP has no legal personality and exists only between the partners.

The management of the SEP is entrusted to a MANAGER ("GÉRANT"), who is chosen by the partners from among themselves.

The BUYER of the project is not aware of the existence of SEP. They are invoiced by an AGENT or CONTRACTOR who is the representative of the members of the Temporary Business Group (and therefore of SEP) to the BUYER for the invoicing of the GME. The AGENT / CONTRACTOR is one of the partners of SEP and a member of the GME. This AGENT / CONTRACTOR invoices in his own name, but on behalf of the SEP.

This means that the AGENT / CONTRACTOR is identified as the SELLER in the sales invoices to the BUYER, but that the sales proceeds are in fact recorded in the SEP (by the MANAGER ("GÉRANT") upon presentation of the sales invoices issued by the AGENT / CONTRACTOR in his own name and on behalf of the SEP) and not as a sale by the AGENT / CONTRACTOR to the BUYER.

For SEP purchases, from the suppliers' point of view, it is the Manager who acts as the BUYER. It is therefore the MANAGER who is invoiced by the SEP's suppliers (he or she appears as the BUYER on the invoice).

In particular, the partners in the SEP invoice their share of the services to the SEP. They are therefore the SELLER on their sales invoices and the BUYER is the MANAGER. Consequently, on the invoices for services provided by the MANAGER to the SEP, the MANAGER is identified as both the SELLER and the BUYER.

In terms of VAT, the MANAGER ("GÉRANT") may decide either to include the VAT relating to the SEP in their own VAT returns, or to declare the VAT relating to the SEP's activity separately.

The reform will not change the way SEPs operate in terms of the accounting and tax treatment of SEP sales and purchase invoices, but the pre-filled information will not correspond to the VAT returns of the various parties involved, namely the CONTRACTOR, MANAGER, and SEP.

Furthermore, if invoices are generated by management software linked to accounting software, the latter must be able to isolate invoices issued by the CONTRACTOR, Representative of the SEP to the END BUYER. Similarly, the solutions used to manage purchase invoices received by the MANAGER/representative of the SEP for its purchases from the SEP's suppliers must be able to isolate these purchase invoices on behalf of the SEP from purchase invoices on behalf of the MANAGER itself.

Thus, sales invoices issued by the CONTRACTOR (or in its name if their creation and transmission is entrusted to a third party, for example the MANAGER), and if the CONTRACTOR and the BUYER are subject to VAT so that the invoice is subject to the electronic invoicing obligation, then the pre-filling for VAT collection will be attributed to the CONTRACTOR, who will also be required to transmit the payment receipt status if VAT is due upon receipt.

Purchase invoices are sent to the MANAGER. They are therefore subject to the electronic invoicing obligation, unless the supplier or the MANAGER are not subject to it or the service is not covered by the e-invoicing component of the reform. In the case of international purchases, it is therefore the MANAGER who must declare the corresponding 10.1 flows.

All this leads to the pre-filling of the MANAGER's deductible VAT being increased by the deductible VAT on these purchases, even though it will appear in the SEP's VAT return (unless the MANAGER has opted for an integrated return).

That being said, it is necessary to see how exchanges can take place so that the MANAGER has access to invoices issued or received on behalf of the SEP.

With regard to SEP sales invoices, the CONTRACTOR may choose an Accredited Platform that will provide the MANAGER with access to invoices issued on behalf of the SEP. To maintain the anonymity of the SEP while restricting the MANAGER's access to only those invoices issued by the AGENT on behalf of the SEP, a project reference can be used and included in the invoice (for example, BT-11).

It is also possible, and preferable, **for the CONTRACTOR to choose to entrust the creation of invoices to the MANAGER**, who can then use the Accredited Platform of their choice (PA-TE) and manage the life cycle statuses, including the payment receipt status, as the MANAGER is often best placed to track the payment receipt of sales invoices (often paid into a bank account dedicated to the SEP). In practice, this still means that the Accredited Platform thus chosen is concerned with the existence of an invoicing mandate between the CONTRACTOR and the MANAGER, which amounts to identifying the CONTRACTOR as a user of the PA-E Accredited Platform, granting delegation rights to the MANAGER so that they can act on behalf of the CONTRACTOR (See third-party management, section 3.2.1.2).

The MANAGER must nevertheless inform the CONTRACTOR of the issuance of invoices and their payment receipt to enable the latter to better measure the differences between their pre-filled VAT return and their VAT declaration. He or she may also ask the Approved Issuing Platform (PA-TE) for SEP sales invoices to open access for the AGENT or to send them the invoices issued in their name as well as the related life cycle statuses.

As **the SEP's purchase invoices** must be sent to the MANAGER acting as the BUYER, the BUYER's electronic invoicing address (BT-49) on invoices must be of the type SIRENGérant_XXX. In order to clearly distinguish these invoices from the MANAGER's own purchase invoices, it is recommended that the MANAGER create a dedicated electronic invoicing address, either for each SEP it manages or globally for its SEP management activity. They must then ask suppliers to include a reference on invoices (either a **purchase order number (BT-13)**, a **project number (BT-11)** or a **buyer reference (BT-10)**, etc.) in order to assign invoices to the correct SEP. The electronic invoicing address could therefore be, for example, *SIRENGérant_gestionniers*.

Figure47: Management of sales and purchase invoices on behalf of an SEP (joint venture)

For status management:

- If the creation of invoices from the CONTRACTOR to the BUYER has been entrusted to the MANAGER (who is therefore a third-party invoicer), the latter also manages the sales invoice lifecycle, which may involve cancelling the invoice, creating corrected invoices or credit notes, and setting the status to "Payment Received" if necessary.
- If the CONTRACTOR retains control of sales invoices on behalf of the GME (and the SEP), he must forward them to the MANAGER and keep him informed of the life cycles. The CONTRACTOR may also arrange for the MANAGER to access the PA-E chosen by the CONTRACTOR to enable the MANAGER to track these invoices and statuses (or send them to the MANAGER via CDAR messages, as described in section 3.2.1.2).
- The MANAGER manages the life cycle of purchase invoices with suppliers.
- Suppliers and the Buyer manage their invoices as normal, without any impact from the fact that the underlying transactions are carried out by an SEP.

In terms of VAT, the situation is therefore as follows:

- If the CONTRACTOR is different from the MANAGER or if they are also the MANAGER and have not chosen to include the SEP's VAT in their own VAT return, then the CONTRACTOR's pre-filled VAT return is incorrect in the amount of VAT collected on sales invoices that were issued in their name but on behalf of the SEP.
- If the MANAGER has not chosen to include the SEP's VAT in their own VAT return, the MANAGER's pre-filled VAT return is incorrect in respect of the deductible VAT on purchase invoices relating to the SEP's activity.
- If the MANAGER is also the CONTRACTOR and has opted to include the SEP's VAT return in their own, the pre-filled discrepancies merge and offset each other. This is because the sales invoices are then issued by the MANAGER on behalf of the SEP, but the SEP's VAT is included in that of the MANAGER. Similarly, the SEP's deductible VAT is allocated to the Manager for VAT pre-filling, which corresponds to the Manager's return, which includes the SEP's VAT in their own.

Finally, if the MANAGER invoices the SEP (as each partner does), this invoice will have the Manager as the SELLER and the MANAGER as the BUYER. It will be sent by the MANAGER's PA-E to the PA-R that the MANAGER has chosen to receive invoices dedicated to its SEP management. There is nothing to prevent this from working.

Finally, as SEPs can have a SIREN number and be subject to VAT themselves, they may be listed in the PPF Directory («Annuaire»), which is public, as they are listed in the SIRENE database, which is also public. It is therefore important not to activate an electronic invoicing address for this SEP and to avoid any publicity about its existence, so that it remains hidden from the general public (and is only known to those who know its name or SIREN number).

Obligations of (Accredited Platforms («Plateformes Agréées»)):

- **Know how to process the minimum base formats and profiles (invoice and CDAR), and e-reporting (flow 10).**

Optional features of the MANAGER's PA-TE:

- **Allow shared access to the CONTRACTOR on the PA-E to access invoices issued in their name on behalf of the SEP and the related life cycle statuses.**

3.2.37 Case No. 38: Invoices with sub-lines and line groupings

In certain sectors, composite items require a detailed description of their composition. Examples include:

- The sale of kits that combine various items, such as a tool pack, where it is necessary to specify which tools are included in the pack. The price may be the result of the unit prices and quantities of each item in the pack, or a total price, taking into account any commercial allowance, where applicable.
- The sale of items composed of several sub-items to which different VAT rates apply, such as a toy book for which the book is subject to 10% VAT and the toy to 20% VAT.

Certain invoicing practices may also lead to subtotals being expressed, for example by order in a multi-order invoice, by delivery in a multi-delivery invoice, etc.

This can potentially lead to duplicate amount information being displayed: once in a detail or information line, and once in a group or subtotal line.

To allow these invoices to continue to exist, as they are the result of widespread practices that are considered useful and necessary by the companies that use them, data and management rules have been added to the EXTENDED-CTC-FR profile, described in Standard XP Z12-012.

The usage is as follows:

- In order to organize a structure between lines, i.e., to indicate that certain lines depend on and are linked to another line, a "Parent Line ID" data field has been added, which must therefore indicate a line number (BT-126) that exists in the invoice.
- Then, to avoid counting an invoiced amount more than once, lines can be qualified using a "line subtype" field, which can take the following three values:
 - ✓ **DETAIL:** means that this line must be taken into account in the calculation of totals and VAT breakdowns
 - ✓ **INFORMATION:** means that the line is present for information purposes, as a detail of the line to which it is attached. For example, a tool pack has a main line with the price and the line amount without VAT (BT-

131) taken into account in the calculation of totals, and "INFORMATION" lines are used solely to detail what is included in the pack.

- ✓ GROUP: means that the line is a grouping, a subtotal, which should not be taken into account in the calculation of totals and VAT. This applies to the "sub-lines" attached to it, which are therefore classified as "DETAIL."
- "Standard" lines, without a "Parent line identifier" or "line subtype," may also be present in an invoice with sub-lines.

GROUP and INFORMATION lines are not subject to the requirement to include mandatory line information (unit price, quantity, VAT data, line amount without VAT). They are also not transmitted in flows 1 or 10.1.

However, a "GROUP" line that has the current line amount without VAT (BT-131) MUST then have this amount equal to the sum of the "line amounts without VAT (BT-131)" of the lines directly linked to it of type DETAIL or GROUP (so that the presentation of the subtotals remains accurate). As a result, when a GROUP line has a line total without VAT (BT-131), all GROUP lines directly or indirectly linked to it (at several levels below) MUST also have a line amount without VAT (BT-131).

When sub-lines are used to describe the details of a composite item, it may be useful to enter the quantities of each sub-item (in each sub-line) for ONE UNIT of the composite item. This can be done using data EXT-FR-FE-191.

All of this is specified in the management rules for the EXTENDED-CTC-FR profile.

Example of use 1: Use the "INFORMATION" lines to complete the item description: The sale of 2 "Toolbox" kits, each containing 3 pliers, 5 hammers, and 1 screwdriver (for a total of 6 pliers, 10 hammers, and 2 screwdrivers). The price is set at the KIT level, with the "INFORMATION" lines providing details. The lines in blue are grouped together. The line 1 could also have been classified as "DETAIL." Line 2 is an independent additional information line. Line 3 is a standard line.

Only the required data from lines 1 and 3 will be transmitted in stream 1 or 10.1.

Lines										
LineID	Parent LineID	LineStatus ReasonCode	Name	Invoiced Quantity	Per Package Qty	Unit of measure	PU Net	VAT Category code	VAT rate	Invoice line net amount

BT-115	BT-118	BT-119	BT-117	Total VAT (BT-110)	6,60
33,00	S	20%	6,60	Total with VAT (BT-112)	39,60

Figure50: Invoice with a main line and supplements attached to it

NOTE: the line number does not need to replicate the structure (1.1, 1.2). The Parent line identifier is sufficient for this purpose.

Example of use 4: multiple levels of sub-lines: the sale of 2 displays, each consisting of 3 packs of Kenya Roast, 6 packs of Dark Roast, and 3 bundles consisting of 3 packs of Columbia Roast and 3 MUGs, with potentially different applicable VAT rates (for the example). This illustrates the fact that lines can be organized on several levels. Again, only DETAIL lines count in the calculation of totals and VAT breakdowns, and are transmitted in flows 1 and 10.1.

Lines

180,00	S	7%	12,60			

Figure51: Invoice for a composite item with 2 levels

This ability to construct an invoice with sub-lines and a multi-level sub-line hierarchy makes it possible to address many situations, including avoiding excessive repetition of line information. For example, in the case of multiple deliveries, it may be appropriate to indicate the delivery address only on a main line (without a "line subtype") or even on an INFORMATION line and then attach the details of the lines corresponding to that delivery.

This will also be central to the creation of multi-vendor invoices, see use case 39.

Obligations of Accredited Platforms («Plateformes Agréées»):

- **Know how to process the minimum base formats and profiles (invoice and CDAR), and e-reporting (flow 10).**

3.2.38 Case No. 39: Transparent intermediary consolidating sales from multiple Sellers for the same buyer – Multi-Vendor Invoice

In certain cases, an intermediary acts as an aggregator between SELLERS and a BUYER, as if it were an opaque intermediary (purchasing goods or services from Sellers and reselling them in bulk to a BUYER), but in fact as a simple transparent intermediary, i.e., acting on behalf of the SELLERS vis-à-vis the BUYER, or on behalf of the BUYER vis-à-vis the SELLERS (in this case as the BUYER's AGENT).

In many cases, a main SELLER also invoices for ancillary or complementary services to its own, which are provided and therefore sold by other SELLERS. These services are included in the invoice issued by the Main SELLER.

The most common example is the water supply bill, which includes sanitation services and services provided by certain public bodies. Regulations require that only one invoice be issued in such cases.

The current solution means that the water distributor invoices services provided by other SELLERS on its own invoice, then sends the accounting and VAT information to each SELLER for their accounting and VAT returns.

If nothing changes, the water distributor's pre-filled VAT return will be incorrect, as the third-party services will be allocated to it in terms of VAT collected. The same will apply to the other SELLERS.

There are many examples of this in practice when a third party intervenes in a commercial transaction, acting as a consolidator for a BUYER, for example:

- Leasing services (vehicles, various equipment), where insurance or maintenance services are added to leasing invoices even though they are provided and normally invoiced by third parties.
- Toll road subscriptions, which bill on behalf of several highway toll companies.
- Fuel purchase cards leading to a periodic multi-supplier invoice.
- Taxi booking companies that produce a periodic invoice with all the trips for a given month, which are in practice unit services provided by taxi companies to the end BUYER.
- Travel agencies that act as booking intermediaries, generally also acting as third-party payers to the various transport or other service providers, and invoice their services as well as reimbursement lines for individual travel services, indicating the analytical data required for processing by the BUYER.

There are two main solutions for addressing these use cases:

- Organize an exchange of individual invoices between each SELLER and the BUYER, to which the third party has access in order to act as the BUYER's AGENT intermediary, integrating expense lines into its own invoices for overall processing by the BUYER on an aggregated service.
- Enable the issuance of a multi-vendor invoice, producing as many 1 (or 10.1) flows as there are individual invoices per SELLER, and allowing the BUYER to process the invoice as a single invoice.

3.2.38.1 Individual unit invoices and "global" invoice from the third party transparent to the BUYER

In practice, this case is extremely similar to case no. 15 of a BUYER'S AGENT acting on behalf of a BUYER with multiple SELLERS and also intermediating the payment. The resolution is therefore the same, namely:

- The third party agrees with the BUYER to create an electronic invoicing address dedicated to specific multi-seller purchases, which is specific to the BUYER and entrusted to an Accredited Platform capable of offering the third party the right to act on behalf of the Buyer with regard to invoices received at this address (e.g., SIREN_achateexterne).
- SELLERS are informed of this electronic invoicing address to be used with two variants (a mix of the two is possible, since each SELLER chooses what they want to do).
 - ✓ Either the SELLERS create and transmit their invoices through their PA-E, which are then received on the PA-TR of the THIRD PARTY (and the BUYER), to be processed by the third-party BUYER'S AGENT.
 - ✓ Or the THIRD PARTY also acts as a third-party INVOICER on behalf of the SELLER (under invoicing mandate) and therefore creates invoices on their behalf, for example because they have all the transactional information due to their role in the purchasing phase. These invoices are sent via an PA-E capable of offering the THIRD PARTY the option of acting on behalf of each SELLER.
 - ✓ Thus, flows 1 or 10.1 are transmitted for each invoice, allowing the pre-filled VAT to be consistent.
- The THIRD PARTY can therefore process the invoices addressed to the BUYER on its behalf and then invoice the BUYER with a "global" invoice consisting of:
 - ✓ The THIRD PARTY's own intermediation services, subject to VAT.
 - ✓ Expense lines for each of the services covered by the individual invoices, enabling payment for the individual services to be requested and, where applicable, additional analytical information to be provided using item attributes. This corresponds to requests for funds made in the media sector.
 - ✓ However, VAT information is not included in the expense lines and is therefore not present in the VAT breakdown (BG-23). This requires the BUYER to either process the individual invoices in parallel or to request that the analytical information also contain VAT information and references allowing the expense lines to be linked to the individual invoices (e.g., a voucher number for travel services).

Life cycle statuses are normally managed on an invoice basis. Processing statuses (Rejected, Disputed, Approved, Payment sent) are set by the THIRD PARTY or by the BUYER via PA-TR.

If the THIRD PARTY acts as an INVOICER on behalf of certain SELLERS, it must arrange to obtain payment information from the SELLER in order to set the payment status on its behalf (only if VAT is due upon payment).

Figure52: Transparent third party acting as BUYER'S AGENT

3.2.38.2 Multi-Vendor Invoices

When a "main" SELLER handles the invoicing of third-party SELLERS for invoices addressed to the same BUYER as part of an integrated service, another solution is to allow the main SELLER to create a Multi-Vendor invoice in which it will group together the deliveries or services of other secondary SELLERS in its invoice. This way, the BUYER can have a single "standard" invoice that they can manage without worrying about the fact that there are several SELLERS.

From the SELLERS' point of view, the multi-vendor invoice is equivalent to combining individual invoices with the same invoice date, the same BUYER, and most of the references and general information into a single "consolidated" invoice.

However, to allow different types of invoices to continue to exist (invoice, credit note, corrected invoice, advance invoice, etc.), there is no specific type code (BT-3) to identify these invoices, but a dedicated "Cadre de Facturation" "B8, S8, M8".

The use of this Multi-Vendor invoice is at the initiative of the SELLERS, but must not impose any specific processing on the BUYER and its Approved Receiving Platform. Consequently, it is not permitted to use it for self-billing (i.e., created by the BUYER on behalf of the SELLERS).

Consequently, the main principles for creating a multi-vendor invoice, which should be thought of as a consolidated invoice combining deliveries and services from several secondary SELLERS behind a main SELLER, who acts as a transparent intermediary for the secondary SELLERS, are as follows:

- Use a billing framework (BT-23) equal to B8 / S8 / M8 to indicate that it is a multi-vendor invoice
- Use sub-lines with the following for each unit invoice:
 - ✓ a "GROUP" line identifying:
 - the SELLER,
 - a unit invoice number (coded in BT-128 with qualifier BT-128-1 = AFL),
 - a "Cadre de Facturation" (coded in BT-128 with qualifier BT-128-1 = AVV),
 - and the totals (equivalent to the Total HT (BT-109), the VAT amount (BT-110 and BT-111), and the total TTC (BT-112)),
 - ✓ invoice lines of type "DETAIL", with a reason for exemption in inline text (EXT-FR-FE-179) beginning with the unit invoice number between #, serving as a key for the breakdown of VAT per unit invoice. As added

in the EXTENDED-CTC-FR profile and as will be included in the revision of Standard EN16931, the VAT breakdown detail lines will also include the reason for exemption in code and text (in addition to the VAT category and VAT rate).

The Approved Issuing Platform (PA-E) MUST:

- Check the compliance of the invoice by applying the specific French management rules described in Standard XP Z12-012. In the event of rejection, a single rejection status for the main invoice is sent to the PPF (identified with the SIREN number of the main SELLER, invoice date (BT-2) and invoice number (BT-1)).
- Build unit invoices based on the multi-vendor invoice to extract flows 1 (and potentially 10.1 if the PA-E offers this option). If necessary, these invoices can be made available to each SELLER as accounting and tax supporting documents.
- For invoices subject to e-invoicing requirements, send the "Submitted" status for each unit invoice to the PPF CdD, along with the corresponding flow 1.
- Receive life cycle statuses from the BUYER and allow the Main SELLER to manage them on behalf of all SELLERS.
- Replicate the "Rejected" / "Refused" statuses received from the BUYER on the multi-vendor invoice to the secondary SELLERS' individual invoices and forward them to the PPF's CdD (because the BUYER's Accredited Platform only referenced the invoice number in BT-1, corresponding to the primary SELLER's individual invoice).
- Allow the main SELLER to send the "Paid" statuses corresponding to each unit invoice on behalf of the secondary SELLERS (bearing in mind that it is generally the main SELLER who is paid on behalf of all SELLERS and then redistributes the payments to each SELLER).

Situation 3 Sellers SELLER : VENDEUR A INVOICER : VENDEUR A														MULTI-VENDOR INVOICE EXAMPLE										
Vendeur A issues an invoice containing 3 groups of line items, one for each final seller (including Vendeur A).														BT-1	F20250025

Figure53: Example of a multi-vendor invoice

Page 1 / 1

Page142 /193

The table below illustrates how invoice information is implemented in the multi-vendor invoice and in unit invoices, based on the example above:

Invoice information	Data in the invoice Multi-Vendor	Data in the single-vendor invoice (for flow 1 or 10.1)
Invoice number	BT-1: F20250025	Only included for the main SELLER's unit invoice
Invoice date	BT-2: 10/01/2025	BT-2: 10/01/2025
Invoice type: Invoice (380)	BT-3: 380	BT-3: 380
Billing framework	BT-23: S8 because the invoice only includes unit service invoices	This is the online "Cadre de Facturation" that is used
VAT liability code	BT-8: 5 (means "Option on Debits")	The online code will be used, as it may differ from one SELLER to another
GROUP line for each SELLER. For the record, GROUP lines are not present in flow 1).		
Line subtype	EXT-FR-FE-163 = GROUP	EXT-FR-FE-163 = GROUP
Item name:	BT-153: allows you to give a title to the block under the line per unit invoice	BT-153
Unit price, quantity, allowances, and charges online	No apparent interest in the GROUP line	
Information about the SELLER in the line (company name, legal ID, VAT number, country code, etc.)	EXT-FR-FE-BG-13: SELLER online EXT-FR-FE-164: Company name EXT-FR-FE-167: Legal identifier (SIREN) EXT-FR-FE-168: VAT number EXT-FR-FE-177: Country code	BG-4: SELLER BT-27: Company name BT-30: Legal identifier (SIREN) BT-48: SELLER VAT number BT-40: SELLER country code
Specific information for unit invoices	BT-128 (BT-128-1 =AFL): F20250025 BT-128 (BT-128-1 = AVV): S1 EXT-FR-FE-180: 5 or 72	BT-1: Unit invoice number BT-23: Billing framework BT-8: VAT liability
Totals for each "unit invoice"	BT-131 (Total line amount without VAT): 2,500 EXT-FR-FE-181 (Total VAT): 350 EXT-FR-FE-182 (VAT EUR) EXT-FR-FE-184 (Total with VAT per line)	BT-109: Total amount without VAT BT-110: Total without VAT BT-111: VAT in EUROS BT-112: TTC (=BT-109 + BT-110)
DETAIL line: this is a standard invoicing line, but with certain specific data to be entered		
Legal ID SELLER on the line	EXT-FR-FE-167	EXT-FR-FE-167
Invoice number on the line	BT-128 (BT-128-1 =AFL)	BT-128 (BT-128-1 =AFL)

VAT exemption in text (which can also be entered for a standard rate "S" or zero rate "Z")	EXT-FR-FE-178: Must begin with the invoice number on the line (from the underlying unit invoice) between ##: #F20250025#	EXT-FR-FE-178: #F20250025#
VAT breakdown: The exemption reason in text (BT-120) allows for VAT breakdown lines per unit invoice		
The exemption reason in text (BT-120) allows filtering by unit invoice	BT-116, BT-120, BT-121, BT-118, BT-119, BT-117	Only VAT breakdown blocks (BG-23) for which BT-120) begins with the invoice number between ## (#F20250025#)
Foot totals: only apply to multi-vendor invoices		
Total without VAT	BT-109: 8,850	Not included
Total VAT	BT-110: 1,620	Not included
Total with VAT	BT-112: 10,470	Not included

Some additional rules for unit invoices:

- If the total with VAT for unit invoices (in EXT-FR-FE-184 of the GROUP line of the multi-vendor invoice and BT-112 in unit invoices) is missing, then it MUST be calculated as equal to BT-131 + EXT-FR-FE-181 from the GROUP line of the multi-vendor invoice, also equal to BT-109 + BT-110 in unit invoices.
- By convention, the Amount Already Paid (BT-113 in the unit invoice) is set to the amount with VAT (BT-112) insofar as the payment is received by the main SELLER.
- The Net Amount Payable (BT-115) is equal to the Amount with VAT (BT-112) - Amount Already Paid (BT-113), i.e. 0.

NOTE: Document-level allowances and charges are only applied to the main SELLER's unit invoice. It is recommended to avoid using them in favor of line-level allowances and charges.

Obligations of Accredited Platforms («Plateformes Agréées») upon receipt:

- **Know how to process the minimum base formats and profiles (invoice and CDAR), and e-reporting (flow 10), and in particular the EXTENDED-CTC-FR profile, which includes sub-line management and management rules specific to multi-vendor invoices.**

Obligations of Accredited Platforms («Plateformes Agréées») for issuance that have chosen to support multi-vendor invoices for issuance:

- **Knowing how to process a multi-vendor invoice at issue is not an obligation for Accredited Platforms («Plateformes Agréées»). If it is offered, the AP-E MUST comply with the obligations described below.**
- **Offer the main SELLER unit invoices, allowing them to share them with secondary SELLERS for their accounting and tax obligations.**
- **Extract flow 1 (or 10.1 if this option is offered) from the individual invoices, set the status to "Submitted" for each individual invoice.**
- **Allow the primary SELLER to distribute payments by unit invoice (in the case of partial payment).**
- **Replicate the "Rejected" and "Refused" statuses received from the BUYER to the PPF for the secondary SELLERS' unit invoices.**

Obligations of the main SELLER, third-party invoicer:

- **Know how to create compliant multi-vendor invoices.**

- **Manage life cycle statuses on behalf of all SELLERS.**
- **Send third-party SELLERS the accounting and tax information relating to the unit invoices included in the Multi-Vendor invoice.**

3.2.39 Case No. 40: Grouped payments, netting, or compensation in the event of cross-purchases/sales, bidirectional billing

In certain sectors, the BUYER may invoice the SELLER for services or goods, then deduct the amounts due on its own sales invoices to the SELLER from the payment of its purchase invoices.

This does not pose any particular invoicing problems as long as there are two invoices:

- one from the SELLER to the BUYER
- and a second from the BUYER (who therefore becomes the SELLER on the invoice) to the SELLER (who is then the BUYER on the invoice).

If the BUYER knows that their sales invoice will be paid by offsetting it against their purchase invoice, they can enter a payment method with code 97 (in BT-81), which means "clearing between partners."

With regard to the VAT due date for invoices where VAT is payable upon receipt, it is at the time of net payment that both invoices can be considered paid.

Moreover, this principle can be seen as a special case of a group payment practice, where a BUYER decides to pay a set of invoices in a single transaction, from which they can deduct the payment of certain credits, and why not also deduct by offsetting the amounts that their SELLER owes them for cross-services (and therefore sales invoices).

In this case, the BUYER must be able to inform the SELLER of the details of the amount paid to enable the latter to do its lettering and, if necessary, to produce its payment receipt status. The "Payment Sent" and "Payment Received" statuses, issued for each invoice, can then be used for this purpose, in addition to a payment notification message.

With regard to invoicing, in the case of cross-purchasing/cross-selling, and in particular when the BUYER uses self-billing to facilitate the daily operations of its SELLERS, while selling services to them in return, these self-billed invoices issued by the BUYER on behalf of the SELLER may contain negative lines corresponding to services or deliveries of goods that the BUYER provides to the SELLER and which are thus automatically deducted from the amounts to be paid.

This practice is not recommended as it is likely to have the following consequences:

- The negative lines will be considered as lines reducing the SELLER's turnover, whereas they are expense lines for the SELLER (and turnover for the BUYER).
- There is no way to distinguish between negative lines that are actually cancellations of previous lines, reversals on advance payment invoices, reversals on consumption estimates, etc., and negative lines that are in fact reverse invoicing.
- In addition to the accounting aspects, this can also lead to mixing collected VAT (on sales) and deductible VAT (on purchases) insofar as the VAT footer and totals are aggregated data from the lines.
- If the SELLER's VAT regime is the basic exemption, or if they are not subject to VAT, the sales lines fall under the SELLER's VAT regime (e.g., exemption for basic exemption), and the negative lines fall under the BUYER's VAT regime. Flow 1 will then show part of the invoice as basic exemption and another part with standard VAT, which will greatly disrupt the SELLER. The other risk is that the BUYER will "take advantage" of the SELLER's basic exemption regime for its negative lines of goods or services sold to the SELLER.
- The VAT pre-fill will be incorrect on both sides, as it is based on footer and total data, and cannot distinguish between negative lines for cancellations or reversals and negative lines for reverse sales.

The best practice is therefore to split the transaction into two invoices with an offset in the payment section, as described in paragraph 3.2.39.1. However, to ensure continuity with certain currently accepted practices, it is also possible to use bidirectional self-billing, which resolves most of the issues listed above, as described in the XP Z12-012 standard and in paragraph 3.2.39.2 below.

3.2.39.1 Cross-selling: Best practice—issue two invoices and offset them for payment.

The best practice is therefore to issue two invoices and proceed with a settlement by offsetting the amount of the sales invoice against the purchase invoice payment, informing the SELLER by using the "payment method" code" (BT-81) equal to "97" and, in the case of a group payment, informing the SELLER of the payment details.

This can also be done through the life cycle statuses:

- "Payment Transmitted" status issued by the BUYER to the SELLER of the purchase invoice for the amount with VAT on the net payment date.
- "Received" status issued by the BUYER to the SELLER for the sales invoice, on the date of the cleared payment, for the amount with VAT.

For illustration purposes, below is an example of a self-invoice accompanied by a cross-sale invoice.

- Cross-sale invoice F202600037 is "offset" against self-invoice AUTOF202600028
 - ✓ The amount already paid (BT-113) equals the total including tax (BT-112)
 - ✓ The net amount due (BT-115) is 0
 - ✓ The payment method (BT-81) is 97: intercompany offset
- Self-invoice AUTOF202600028 is partially paid through netting with cross-invoice F202600037
 - The amount already paid (BT-113) is equal to the total including tax (BT-112) of cross-invoice F202600037 (244.67)
 - The net amount due (BT-115) is equal to the balance: 22,359.33
 - The payment method (BT-81) is 58: SEPA transfer

Figure 55: Illustration of a primary self-billed invoice offset with a cross-invoice (the buyer selling back to the seller)

Obligations of Approved Platforms:

- Be able to process the minimum standard formats and profiles (invoice and CDAR), as well as e-reporting (feed 10).
- Be able to process use case No. 19b: self-billing.

Obligations of the BUYER and the SELLER:

- Have entered into a bilateral agreement for the implementation of self-billing.

In the illustration above:

- The green lines correspond to the main self-invoice No. AUTOF202600035. The online Seller is the SELLER of the self-invoice (AGRI1).
- The blue lines correspond to the cross-sale invoice AGRI1_F202600035. The seller listed in the row is the BUYER of the main self-invoice (COOP1).

The BUYER's Authorized Platform must therefore extract two data streams 1 by applying the dedicated mapping rules, which requires the following for the cross-invoice:

- to swap the BUYER and SELLER,
- to change the sign of the unit prices (BT-146, BT-148, BT-147),
- changing the sign of the line item amounts (BT-131),
- changing the sign of the pre-tax base in the VAT breakdown (BT-116),
- change the sign of the pre-tax total (BT-131 in the header's GROUP line, line 20 in the example above),
- change the sign of the VAT total (EXT-FR-FE-181 in the header's GROUP line, line 20 in the example above).

Status management is handled as follows:

- The BUYER's PA-E will generate two "Submitted" lifecycle status messages (one per sub-invoice).
- The SELLER's PA-R processes the invoice as a self-invoice and transmits the transmission statuses (Rejected, Received, Made Available) and processing statuses (Declined, In Dispute, Approved, Partially Approved) to the BUYER's PA-E, referencing the self-invoice.
- The BUYER's PA-E must report the mandatory statuses (Rejected, Refused) to the PPF for the cross-sale sub-invoice (principle of maintaining complexity on the PA-E).
- If the self-invoice has VAT due upon receipt of payment, the SELLER transmits to the PPF Data Concentrator, via its PA-R, the payment receipt lifecycle status of the self-invoice for the amount received plus the offset amount from the cross-sale invoice:
 - ✓ in the example above: 22,604 euros including tax, at a VAT rate of 5.5%.
- Upon receipt of the "collected" status for the self-invoice or upon issuance of the bidirectional self-invoice—provided that the netting can be considered equivalent to collection (depending on established practices and their validity)—if the cross-sale invoice has VAT due upon collection, the BUYER transmits the cross-sale collection status to the PPF Data Hub and to the SELLER via its PA-E.
 - ✓ In the example above, this results in two entries:
 - 239.22 at 20% VAT
 - 5.35 at 0% VAT

NOTE: Invoice numbers. Since there are actually two invoices in one, there are two invoice numbers, which are normally part of two different numbering series (the self-invoice series, which must be assigned by the SELLER, and the cross-invoice series, which is assigned by the BUYER for their own invoices, noting that the BUYER may choose to dedicate a separate numbering series to these invoices). When current practice uses a joint numbering system for both invoices, it is nevertheless necessary to prefix them specifically in order to create two parallel numbering series, as shown in the example above, where the common root of the invoice number is F202600035, resulting in AUTOF202600035 for the self-invoice and AGRI1_F202600035 for the cross-invoice. However, this requires approval from the tax authorities, since the rule of chronological, continuous invoice numbering from each seller's perspective is not adhered to in terms of its continuity (there are gaps in the numbering from each seller's perspective, and even from the BUYER's perspective).

Obligations of the Approved Receiving Platform (SELLER's PA-R):

- **Be able to process the minimum core formats and profiles (invoice and CDAR), as well as e-reporting (flow 10), and in particular the EXTENDED-CTC-FR profile (and Factur-X's EXTENDED profile), which includes the management of sub-lines and the specific processing rules for bidirectional invoices.**
- **Be able to process the receipt of self-invoices.**

Obligations of the Accredited Platform for Issuance that has chosen to support bidirectional self-invoices during issuance:

- **The ability to process a bidirectional self-invoice during issuance is not an obligation for Accredited Platforms. If this functionality is offered, the PA-E MUST comply with the obligations described below, in addition to its general obligation to be able to process the formats and profiles of the minimum core set (invoice and CDAR), e-reporting (flow 10), and, in particular, the EXTENDED-CTC-FR profile (and Factur-X's EXTENDED profile).**
- **Be able to process the issuance of a self-invoice and the corresponding lifecycle statuses.**
- **Extract flow 1 (or 10.1 if this option is available) from the main self-invoice and the cross-sale invoice, as described in this chapter, and set the status to "Submitted" for each of these two individual sub-invoices.**
- **Replicate the "Rejected" and "Refused" statuses received from the SELLER's PA-R to the PPF Data Concentrator for the cross-sale invoice.**

Obligations of the BUYER using two-way self-billing:

- **Know how to create compliant two-way invoices.**
- **Manage the "Paid" lifecycle status for the cross-invoice if VAT is due upon receipt of payment.**

Obligations of the SELLER accepting two-way self-billing:

- **Be able to record a two-way self-billing transaction by distinguishing between the sales portion and collected VAT and the purchase portion and deductible VAT.**
- **Know how to generate a "Received" lifecycle status corresponding to the sale alone, if VAT is due upon receipt of payment.**

3.2.40 Case No. 41 Barter Companies

In the advertising sector, there are transactions where an advertiser sells goods or services in exchange for advertising services to be consumed in the coming months.

This practice has led to the emergence of barter companies (inter-company bartering), which are intermediaries that purchase goods or services from advertisers, paying only part of the price (at least the VAT) and keeping the rest on account for a future advertising transaction.

At the same time, these barter companies offer goods and services to advertising agencies, which also pay them only partially (at least the VAT).

Then, when advertising agencies offer advertising services to advertisers, payment for these services can be made through compensation between the amounts owed by the barter company to the advertiser and those owed by the advertising agency to the barter company.

This case does not detail the role of media agencies, described in case no. 15, which continues to apply when an advertiser uses a media agency. The Media Agency acts as a Third Party Buyer and may, where applicable, pay invoices on behalf of the advertiser after calling for funds, for the amounts that the advertiser wishes to pay in cash (and not by offsetting through its credits with the Barter company).

The main objective of this case is to detail how compensation payments will be organized alongside cash payments, their consequences on payment receipt statuses, and how to fill out invoices to indicate the use of compensation via a barter company.

Figure57: Illustration of an invoicing cycle through a barter company

In these exchanges, each sale is invoiced, for which at least the VAT amount is paid within the regulatory deadlines.

As a result, when VAT is due upon receipt, the VAT return is filed as if the entire invoice had been paid, since the VAT has been paid in full.

In practice, the Barter company only intervenes on the pre-tax portion of the various transactions.

To indicate the specific payment details on invoices, pending future changes to Standard EN16931, the proposed practice is as follows:

- For the Advertiser's sales invoice to the Barter company:
 - ✓ Use the Amount already paid (BT-113) to indicate the amount to be charged (receivable for the advertiser, payable for the Barter company).
 - ✓ The Net Amount Payable (BT-115) therefore corresponds to the amount actually payable (higher than the VAT on the invoice).
- For the Barter company's sales invoice to the Advertising Agency:
 - ✓ Use the Amount already paid (BT-113) to indicate the amount to be charged (receivable for the Barter company, payable for the Régie).
 - ✓ The Net Amount Payable (BT-115) therefore corresponds to the amount actually payable (higher than the VAT on the invoice).

The Régie's sales invoice to the Advertiser with partial payment through the Barter company is similar to what is described in Use Case No. 4, when a third party is identified as having to pay part of the pre-tax amount of the invoice (for example, an insurer covering part of the pre-tax amount of a claim repair invoice).

The specific data and associated management rules are therefore as follows:

- The INVOICE PAYER block (EXT-FR-FE-BG-02) can be used to mention the third-party PAYER in the invoice and identify the Barter company.
- The "Amount already paid" field (BT-113) MUST then be used to enter the amount of the invoice covered by the third-party PAYER (the Barter company).
- This will ensure that the "Net amount payable" (BT-115) is correct, equal to the total amount with VAT of the invoice (BT-112), minus the amount already paid (BT-113, also used to indicate an amount payable by a third party).

- The "invoice note" block (BG-1) can be used to indicate that part of the invoice is being offset via the Barter company. The subject code (BT-21) to be used is "PAI", which allows information about the payment to be indicated;

With regard to "Payment Received" statuses, in order to declare both a full payment from a VAT perspective and a future payment of a portion without VAT, the following information must be provided for each invoice with partial payment including the full amount of VAT:

- A positive payment receipt of the amount with VAT (MDT-215), with the applicable VAT rate (MDT-224) and the type code MDT-207 = MEN. In the event of multiple VAT rates, there must be as many records of amounts received as there are applicable VAT rates.
- A negative payment receipt of the amount without VAT, which will be credited for subsequent compensation and to which VAT does not apply (MDT-215 = amount without VAT not paid, as expressed in BT-113 of the invoice, MDT-224 = 0). The standard code MDT-207 is MEN (a specific code may be dedicated in a later version of this document).

The same process can also be carried out without a barter company, i.e., the advertiser sells a good or service to the advertising agency, which only pays VAT. Then, when the advertising agency sells a service to the advertiser, the latter pays at least the VAT and deducts the additional amount owed from what the advertising agency owes them. This is the same situation of partial payment with compensation, given that VAT is always paid in full upon presentation of the invoice, and that the "Payment Received" records must therefore show a total "payment received" entry with the VAT details of the invoice, supplemented, where applicable, by a negative "payment received" entry for the amount without VAT to be compensated.

Obligations of Accredited Platforms («Plateformes Agréées»):

- **Know how to process the minimum base formats and profiles (invoice and CDAR), and e-reporting (flow 10).**

3.2.41 Case No. 42: Tax exemption management

In a B2C sale, a non-taxable customer established in a third country may benefit from tax exemption (the customer), i.e., a VAT refund. To do this, the merchant offering this service must provide the BUYER with a BVE (Bulletin de Vente à l'Exportation, or Export Sales Bulletin), which will allow the customer to exercise their right to a refund when passing through customs and the merchant to be informed of this. This must be done within 6 months of the sale and delivery of the BVE.

There are several ways for a merchant to deal with this issue:

- Case 1: Initially declare the sale as domestic B2C, then wait for the customer to clear customs and for the BVE to be validated within the deadline in order to refund them, with two options:
 - ✓ Refund the customer directly
 - ✓ Use a tax refund operator, who will refund the customer and then re-invoice the merchant to be reimbursed (disbursement), with a management fee (presumably taxable, to be checked with tax specialists). This results in an invoice that is partially or totally outside the scope of the reform (if it is just a refund request).
- Case 2: the retailer makes a direct international B2C sale (without VAT), which they must reclassify as a domestic B2C sale if they do not obtain proof of validation from the BVE within six months.
- Case 3: the merchant uses a comprehensive service provided by a tax refund operator, which consists of starting the sale as a domestic B2C sale, then selling the same goods (already paid for by the customer) to the tax refund operator so that the latter can be the seller of the goods to the customer when they go through customs and apply for a tax refund. From the retailer's point of view, this is exactly the same as a sale to a private individual, which then turns out to be a sale to the company for which they are acting and which has requested a B2B invoice.

3.2.41.1 Case 1: Initial domestic B2C sale

The merchant makes a B2C sale, which results in a B2C 10.3 e-reporting record as follows:

- TT-81 {TRANSACTION CATEGORY} = TLB1
- TT-82: Total amount without VAT
- TT-83: Total VAT amount
- TG-32: Breakdown by VAT rate
 - ✓ TT-86: VAT rate
 - ✓ TT-87: VAT base
 - ✓ TT-88: VAT amount

When the customer clears customs and validates their BVE, the merchant reimburses them for the VAT (or reimburses the tax refund operator who did so on their behalf) and must correct their B2C e-reporting from category TLB1 to category TNT1.

To do this, they must cancel the above entry and make a new one corresponding to a sale in category TNT1:

- on the one hand, by including in their e-reporting 10.3 record for the "sales of goods" category (TLB1) the record detailed above but with negative amounts for the pre-tax and VAT amounts,
- and by including in their e-reporting 10.3 record for the "sales not subject to VAT in France" (TNT1) category, the above amount without VAT and VAT at 0%.

The merchant may charge a commission on this transaction, which is a sale of services, subject to VAT, and potentially subject to VAT upon payment receipt. This commission must therefore be treated as a B2C sale, resulting in a contribution to the daily total in the "sale of services" category TLS1 in TT-81 of flow 10.3, and in the total of flow 10.4, except in the case of an option on the merchant's debits.

Finally, if the VAT is refunded by a tax refund operator on behalf of the merchant and not following a sale of the goods to the tax refund operator as detailed in case no. 3, the tax refund operator may request a VAT refund from the merchant through an expense invoice only on the amount of VAT refunded, from which any fees charged to the customer on behalf of the merchant for the tax refund service may be deducted, this invoice being outside the scope of the reform.

The tax refund operator invoices this management fee to the merchant, which is a domestic B2B service sale transaction and therefore falls within the scope of the electronic invoicing obligation with "Payment Received" status in the absence of a debit option. This management fee charged by the tax refund operator can be added to the expense invoice, which then becomes subject to the reform, and must be done under the EXTENDED-CTC-FR profile, which is currently the only one that allows invoices with lines outside the scope (VAT category = 0) and lines with other VAT categories.

3.2.41.2 Case 2: B2C sale with VAT not applicable in France

The merchant makes a direct B2C sale without VAT in category TNT1 (VAT not applicable in France). The customer must go through customs to confirm the tax refund.

The merchant must therefore already make a B2C TNT1 e-report:

- TT-81 {TRANSACTION CATEGORY} = TNT1
- TT-82: Total amount without VAT
- TT-83: 0
- TG-32: Breakdown by VAT rate
 - ✓ TT-86: 0
 - ✓ TT-87: Total amount without VAT
 - ✓ TT-88: 0

If the customer does not provide proof of BVE validation (customs clearance) within 6 months, the merchant must correct the sale as a domestic goods sale. In this case, the amount paid becomes an amount with VAT, and the merchant will therefore lose the VAT.

To do this, they must first cancel the above entry by including the above details in their e-reporting 10.3 entry for the category "sales not subject to VAT in France" (TNT1), but with negative amounts without VAT. They must then include the following details in their e-reporting 10.3 entry for the category "sales of goods" (TLB1)" (TLB1) category (in the case of a single VAT rate and for amounts in euros):

- TT-81 {TRANSACTION CATEGORY} = TLB1
- TT-82: Sale amount / (1 + VAT rate / 100), rounded to 2 decimal places.
- TT-83: Initial sale amount - TT-82
- TG-32: Breakdown by VAT rate
 - ✓ TT-86: VAT rate
 - ✓ TT-87: TT-82
 - ✓ TT-88: TT-83

This correction ensures consistency between the tax exemption that was ultimately not applied and the B2C sales e-reporting.

3.2.41.3 Case 3: Tax exemption carried out entirely by a tax exemption operator

In this case, the retailer has a contract with a tax refund operator to entrust them with the entire tax refund operation. The principle is then to sell the goods purchased by customers requesting a tax refund to the tax refund operator, so that the latter becomes the seller when the customer passes through customs, and therefore acts as the retailer in case no. 1.

To do this, the retailer makes a domestic B2C sale, which is converted into a B2B sale after the customer requests a tax refund, exactly as an employee customer would do when requesting an invoice for their company.

The simplest solution is for the retailer to make a B2C sale, which will then be subject to domestic B2C e-reporting as described in case no. 1: contribution to the day's cumulative sales through the corresponding 10.3 flow:

- TT-81 {TRANSACTION CATEGORY} = TLB1
- TT-82: Total amount without VAT
- TT-83: Total VAT amount
- TG-32: Breakdown by VAT rate
 - ✓ TT-86: VAT rate
 - ✓ TT-87: VAT base
 - ✓ TT-88: VAT amount

Then, once the customer has validated their tax refund and been reimbursed by the VAT refund operator, an invoice is issued by the retailer under "Cadre de Facturation" 7 (invoice for which VAT has been declared in B2C e-reporting), addressed to the VAT refund operator.

Since the tax refund operator is subject to VAT in France, this is a B2B invoice that is subject to the electronic invoicing requirement. The tax refund operator can therefore deduct the VAT.

As the sale has already been paid for, the amount already paid on the invoice (BT-113) is equal to the total with VAT, and the net amount payable is equal to 0. The specific characteristics of this invoice are therefore as follows:

- SELLER (BG-4): the merchant
- BUYER (BG-7): the tax refund operator
- Business process type (billing framework, "Cadre de Facturation" : BT-23): B7
- Invoicing lines corresponding to the details of the goods sold
- Amount already paid (BT-113): equal to the total with VAT (BT-112)
- Net amount payable (BT-115): 0
- Potentially, if there is a BVE reference known to the merchant or to the person creating the invoice on their behalf, this can be entered in BT-18 (Invoiced item identifier), with the qualifier (BT-18-1) equal to APT.

The merchant must ensure that the posting of this invoice is accompanied by a reverse entry for the B2C sale it replaces.

This invoice can be issued by the tax refund operator using self-billing (see case 19b). As a reminder, prior agreement between the tax refund operator and the merchant is required, which can take the form of a self-billing mandate associated with the tax refund service contract offered by the tax refund operator to the merchant.

The tax refund operator then finds itself in the same situation as the retailer described in case no. 1, except that it can directly declare the sale in category TNT1 once it has refunded the VAT (which compensates for the VAT deductibility it will be able to benefit from following the purchase from the retailer, as evidenced by the B2B invoice in the "Cadre de Facturation" B7).

Flow 10.3: e-reporting by the tax refund operator:

- TT-81 {TRANSACTION CATEGORY} = TNT1
- TT-82: Total amount without VAT
- TT-83: 0
- TG-32: Breakdown by VAT rate
 - ✓ TT-86: 0
 - ✓ TT-87: Total amount without VAT
 - ✓ TT-88: 0

Obligations of Accredited Platforms («Plateformes Agréées»):

- **Know how to process minimum base formats and profiles (invoice and CDAR), and e-reporting (flow 10).**

3.2.42 Case No. 43: E-reporting for international B2B

The purpose of this chapter is to review the e-reporting obligations for international B2B sales and international B2B acquisitions excluding imports of goods, and to link them to the underlying invoices issued or received.

Firstly, it should be noted that there is no electronic invoicing obligation for international B2B invoices. However, it is possible to exchange electronic invoices. In this chapter, we will only discuss cases where these electronic invoices are in one of the minimum standard formats.

Finally, the electronic invoicing requirement will come into effect with the implementation of the ViDA Directive in July 2030, under specific terms and conditions that are yet to be determined.

This chapter will be divided into five sections:

- A reminder of what an international B2B invoice is and the management rules that apply.
- International B2B sales.
- International B2B acquisitions.
- Payment Receipts on international B2B sales.
- Some additional information on practices specific to international B2B exchanges.

3.2.42.1 What are the specific features of an international B2B invoice compared to a domestic B2B invoice?

From a structural point of view, an international B2B invoice is identical to a domestic B2B invoice. A few additional management rules apply and are defined in Standard EN16931, described in Standard XP Z12-012, and in particular in its Annex A.

In particular, the management rules BR-IC-XX (Intra-Community supply), BR-G-XX (Export), and BR-AE-XX (Reverse charge) apply more specifically.

The management rules specific to France apply to **international B2B sales invoices**, in order to ensure compliance with international B2B e-reporting requirements, for which the data required is that contained in the invoices or derived from them as a result of certain mapping rules. These rules also provide for a few differences between a domestic B2B invoice and an international B2B invoice:

- BR-FR-11: No obligation to provide a SIREN number listed in the PPF Directory ("Annuaire") for international buyers (BT-47).

- BR-FR-21: The buyer's electronic address has no French specific constraints (and therefore does not begin with a SIREN number) for non-self-billed invoices.
- BR-FR-22: The seller's electronic address has no French specific constraints (and therefore does not begin with a SIREN number) for self-billed invoices.

This therefore introduces a difference in control processing for Accredited Platforms on the sending side (and subsequently in the issuance of an e-reporting flow 10 instead of a flow 1) between a domestic B2B invoice and an international B2B invoice. The XP Z12-012 standard provides a way of indicating the type of processing expected in the invoice through a Note with a subject code equal to BAR (rule BR-FR-20). This is one possible option, the alternative being that the Accredited Platform ("Plateforme Agréée") and its VAT Registered customer agree on a method of qualifying the expected processing in parallel (channel for transmitting invoice data or the invoice between the VAT Registered entity and their Accredited Platform by type of processing, file naming, etc.).

It is important to ensure that the international recipient accepts electronic invoices that comply with the EN16931 standard in the format presented (UBL, CII, Factur-X, potentially third-party formats such as EDIFACT or PEPPOLBIS), as this is increasingly being deployed (and is the common target with the deployment of Vida by 2030). The use of the EXTENDED-CTC-FR profile also requires the recipient's acceptance, as an EXTENDED profile may eventually exist at the European level. The use of PEPPOL at least guarantees that all counterparties accept the third-party PEPPOLBIS 3.0 format (UBL compliant with the EN16931 standard, supplemented by a few additional Business Rules).

International B2B purchase invoices are created by international entities and do not have to comply with specific French Business Rules. It is up to the recipient (in this case, the French VAT Registered entity) to decide which formats and profiles they accept.

However, this means that certain information required for international B2B e-reporting may not be present in invoices received from abroad and therefore needs to be completed by the French VAT Registered entity purchaser.

E-reporting (flow 10) must be submitted periodically (every ten days, every month, every two months). As it may happen that invoices are known to the French VAT Registered entity after a certain delay, particularly for international B2B purchase invoices, but in some cases also for sales invoices, it is possible that invoices with an invoice date prior to the start date of the Flow 10 period may be included in this Flow 10. This is particularly necessary if these invoices are included in the VAT return (CA3) corresponding to the period.

As it is not permitted to create invoices with an invoice date later than their creation date, the invoice data present in a flow 10 (flow 10.1) cannot have an invoice date (TT-19) later than the date of submission of flow 10 (within 10 days of the end of the period for companies under the normal regime).

Normally, only invoice data with a date prior to the end date of the flow 10 period should be present in flow 10. However, it is possible that some flow 10.1 records may contain invoices with an invoice date between the end of the period and the date of submission of flow 10, in the event where they correspond to transactions whose Tax Point Date occurred before the end of the flow 10 period. As a result, the pre-filled VAT return will take these invoices into account for the period in which they fall.

3.2.42.2 International B2B sales

This chapter will be completed in the next version.

All VAT Registered entity in France are subject to e-reporting on their international B2B sales for transactions described in Article 290 of the CGI.

A distinction must be made between transactions to a European Union member country and those to a non-EU country, and then between sales of goods and sales of services:

- Intra-Community sales:
 - ✓ Sales of goods: these are "intra-Community supply," which are subject to reverse charge VAT, i.e., VAT payable by the recipient (the purchaser) in its country. These sales invoices mainly have a "VAT category" code equal to "K" and a VAT exemption reason code "VATEX-EU-IC" and/or a VAT exemption reason in text "Intra-Community supply" or its equivalent in the language of the invoice. The VAT category "K" and a VAT rate of 0 are present in the VAT breakdown (BG-23, BT-118, BT-119 respectively), as well as the reason for exemption in text and code (BT-120, BT-121). They are also present in line (BG-25) and allowances and charges at Document level (BG-20, BG-21), with the reasons for exemption in code and text being added to the EXTENDED-CTC-FR profile in anticipation of the revision of Standard EN16931. All BR-IC-XXX

management rules apply to the EN16931 profile. For the EXTENDED profile, rule BR-IC-08 is replaced by rule BR-FREXT-IC-08.

- ✓ Sales of services in the EU: this is also a reverse charge mechanism which generally applies, i.e., VAT is payable by the customer in the country of destination but using the VAT category code “AE” and the exemption reason code “VATEX-EU-AE.” This rule must be confirmed at EU level (as part of the ViDA implementation work). All BR-AE-XXX management rules apply to the EN16931 profile. For the EXTENDED profile, rule BR-IC-08 is replaced by rule BR-FREXT-AE-08.
- Sales to a country outside the EU:
Sales of goods: these are exports of goods for which the VAT category is “G,” the VAT rate is “0,” and the VAT exemption reason is “VATEX-EU-G” and/or the text reason is “Export.” All BR-G-XXX management rules apply to the EN16931 profile. For the EXTENDED profile, rule BR-G-08 is replaced by rule BR-FREXT-G-08.
- ✓ Sales of services: the tax treatment is different from exports, which only concern goods. However, the VAT category code “G” should also be used, with VAT equal to 0, and VAT reason code VATEX-EU-G and/or a VAT exemption reason in text form indicating that it is a sale of services outside the EU.

E-reporting consists of producing a flow 10.1 (TG-8) record for each invoice from the e-reporting message described in external specifications 3.1 and its annexes and included in Annex A of standard XP Z12-012.

This information corresponds to that contained in the invoices, with a correspondence given in the “E-REPORTING - Flow 10” sheet of Annex A of standard XP Z12-012. For certain data, a mapping between the information in the invoice and flow 10.1 is necessary. These are described in the Franch Business Rules among the mapping rules (BR-FR-MAPXX) for which the column entitled “Map Flux 10” is checked in the “BR-France CTC” sheet of Annex A of standard XP Z12-012.

Particular attention must be paid to rule BR-FR-MAP-16 (G2.19 of external specifications 3.1) to enter the identifier of the Seller (TT-33) or Buyer (TT-37) depending on the geographical area of the party and the identification information:

- France: the SIREN and TT-33-1 / TT37-1 equal to 0002,
- EU: the intra-community VAT number and TT-33-1 / TT37-1 equal to 0223,
- Outside the EU: the country code + the first 16 characters of the company name and TT-33-1 / TT37-1 equal to 0227,
- New Caledonia: the RIDET and TT-33-1 / TT37-1 equal to 0228,
- French Polynesia: TAHITI and TT-33-1 / TT37-1 equal to 0229.

Certain data is not required at the start of the reform, but only on September 1st, 2027 for those who are required to issue e-reporting as of September 1st, 2026 (large companies and mid-sized companies). These are blocks with rule G6.15 (Allowances and charges at document level, invoice line data, date of issue of the previous invoice).

The obligation of Accredited Platforms is to receive an e-reporting file compiled by their VAT-registered customer, check it, and transmit it to the PPF.

However, this Accredited Platform, like any Compatible Solution, may offer additional services to compile this e-reporting:

- On the one hand, by extracting the expected data from invoices (as is done for a 1 flow), then applying the mapping rules to create a single 10.1 flow record (TG-8). This is easier to do if the invoice is in a structured format that complies with the minimum base formats and profiles.
- On the other hand, by aggregating unit records from flow 10.1 for international B2B sales and flow 10.3 (B2C sales) to create the periodic e-reporting message for international B2B and B2C sales to be sent to the PPF.

The company can produce this e-reporting information **from its information system** (accounting management, commercial management) **or directly from its issued invoices** (particularly in the structured minimum base format as described in standard XP Z12-012). However, this information must correspond to that contained in its international B2B sales invoices.

Case of invoices in foreign currency: All information is provided in the currency of the invoice except for the VAT amount (TT-52), which is expected to be in EUROS only. It is also possible to provide all amounts in EURO equivalent (for example, if the data comes from accounting records). In this case, the currency of the invoice (TT-22) must be EUR.

Impact of transfer of ownership for the delivery of goods for export: in the case of export sales, transport to the destination country may be carried out by the seller as part of an international stock transfer, with the sale and transfer

of ownership of the goods taking place once they arrive at their destination. In this case, the sale and transfer of ownership take place on the purchaser's territory and fall outside the scope of international B2B sales e-reporting.

E-reporting of payments: given that the regulations have excluded from the scope of e-reporting invoices for which VAT is payable by the recipient, all invoices for international B2B services sales that fall into this category do not have to be e-reported (flow 10.2) on these invoices.

3.2.42.3 International B2B acquisitions

All VAT Registered entity in France are subject to e-reporting on these international B2B acquisitions for the transactions described in Article 290 of the CGI.

They therefore receive three types of invoices from international sellers:

- Intra-Community invoices from sellers subject to VAT in another EU Member State. These invoices are in the VAT category "Intra-Community supply" (code "K") or in the VAT category "VAT Reverse Charge" (code "AE"), which in both cases means that VAT is payable by the recipient (the taxable person who must report it electronically). If they are electronic and comply with the EN16931 standard, invoices have a VAT detail record (BG-23) with a category code (BT-118) equal to "K" or "AE," a VAT rate (BT-119) equal to 0, and a code exemption reason (BT-121, known as the VATEX code), equal to "VATEX-EU-IC" or "VATEX-EU-AE" and/or a reason for exemption in text (BT-120) equal to "Intra-Community supply" or "Reverse Charge" (or its translation in the language of the invoice). All Business Rules of standard EN16931 BR-IC-XX or BR-AE-XX apply.
- Invoices for the purchase of services from international sellers (not established in another EU country), which are considered by the seller to be exports (therefore VAT category code "G" if they are electronic and comply with standard EN16931).
- Invoices for imports of goods from sellers not established in an EU country, which are excluded from e-reporting obligations.

E-reporting consists of producing a 10.1 (TG-8) record for each invoice from the e-reporting message described in external specifications 3.1 and its annexes and included in Annex A of standard XP Z12-012.

However, the information produced must be from the perspective of the VAT Registered BUYER in France. When the BUYER is in a reverse charge VAT position, which is very often the case, whether for intra-Community supply invoices for the purchase of goods or services or invoices for the purchase of services outside the EU (imports of goods being excluded from e-reporting),

it is required to provide VAT information corresponding to the VAT collected as a result of reverse charge.

The following information must therefore be provided in the VAT breakdown (TG-23):

- TT-54: VAT base as shown on the invoice (in the VAT breakdown with category code K, AE, or G).
- TT-55: Amount of reverse-charged VAT, i.e., obtained by multiplying the tax base by the applicable VAT rate, as recorded in the accounts for reverse charge VAT.
- TT-56: VAT category code: at this stage, it is asked to enter the code "AE," as this is VAT reverse charge from the perspective of the VAT Registered BUYER.
- TT-57: VAT rate applicable for VAT reverse charge, as recorded in the accounts for reverse-charged VAT
- TT-58: Reason for exemption in text: corresponding to the situation.
- TT-59: Reason for exemption in code: VATEX-EU-AE, but it may be useful to distinguish between intra-Community supply and reverse charge on the acquisition of international services outside the EU (to be considered in preparation for ViDA).
- TT-52: the sum of TT-55, converted into EUR if in another currency.

These purchase invoices are received directly by the VAT Registered entity, in any form. The VAT Registered entity is generally the only one who can distinguish between imports of goods and purchases of services outside the EU. The VAT Registered entity is also generally the only one who knows at what rate to reverse charge its VAT.

Only the data required at the start of e-reporting for international B2B sales ("DEMARRAGE") will be required on an ongoing basis for e-reporting of international B2B acquisitions (and therefore not line data, document-level charges or allowances).

This means that e-reporting of acquisitions is mainly carried out by the VAT Registered entity, who can use a compatible solution, or even its Accredited Platform ("Plateforme Agréée"), to help them produce their e-reporting:

- On the one hand, by extracting the expected data from invoices (as is done for a flow 1, but without line data, document-level charges and allowances), then applying the mapping rules and, where applicable, the Business Rules specific to the VAT Registered BUYER to create a single flow 10.1 (TG-8) record.
- On the other hand, by aggregating unit records of international B2B acquisition flow 10.1 to create the periodic e-reporting message for international B2B acquisitions to be sent to the PPF.

Case of invoices in foreign currency: All information is provided in the currency of the invoice except for the VAT amount (TT-52), which is expected in EUROS only. It is also possible to provide all amounts in EURO equivalent (for example, if the data comes from the accounting record). In this case, the invoice currency (TT-22) must be EUR.

NOTE: international B2B acquisitions are not subject to e-reporting of payment receipts by the Buyer subject to VAT in France.

3.2.42.4 Payments received on international B2B sales

All entities subject to VAT in France are required to submit e-reporting for payments received on international B2B sales for transactions described in Article 290 of the French General Tax Code (CGI) and for which VAT is due upon receipt of payment.

This applies to invoices for services for which the option "on debits" has not been activated, as well as pre-payment invoices.

On the other hand, Article 290 A, which governs e-reporting obligations for payments, expressly excludes from this obligation any transaction for which the VAT is payable by the customer, and therefore any transaction involving a VAT reverse charge mechanism by the customer. This therefore concerns the vast majority of intra-Community B2B sales.

The most relevant case is that covered by Article 290 II relating to taxable persons not established in France but having a VAT taxable activity in France, who must produce an e-report on their sales located in France on which they are liable for VAT. When it comes to services and they have not opted for "debits", or when it comes to pre-payment invoices, e-reporting of payment is required.

For the invoices concerned, an e-reporting of collection is required, corresponding to flow 10.2 (TG-34), in which the following must be provided:

- The invoice number (TT-91)
- The invoice date (TT-102)
- A Payment (collection) block (TG-35) consisting of:
 - Payment date (TT-92)
 - Breakdown of payments by VAT rate (TG-36)
 - Rate (TT-93): as in the invoice
 - Currency code (TT-94): must be EUR
 - Amount received (TT-95): equivalent value in EUR in the case of payment in foreign currency.

In the event of an e-reporting error for a collection (amount error, invoice allocation error), a record with a negative amount can be used to correct it.

In the event of an invoice followed by a credit note subject to e-reporting of payment receipts, either a positive receipt is made for the invoice and a negative receipt for the credit note (on the same date), or no e-reporting of payment receipts or e-reporting of payment receipts for the balance only with reference to the invoice.

In the case of a corrected invoice, only the e-reporting of the payment on the corrected invoice is made.

E-reporting of payments is carried out by the VAT Registered entity SELLER after reconciling its payments with the relevant international B2B sales invoices.

The Accredited Platform ("Plateforme Agréée") or Compatible Solution can help the company to compile this e-reporting of payment receipts:

- On the one hand, by offering its customer the option of producing "Payment Received" life cycle statuses to transform them into individual "Payment Received" records for international B2B sales invoices (TG-34).

- On the other hand, by aggregating unit records of 10.2 “Payment Received” records from international B2B sales and B2C “Aggregated Payment Received” record (10.4) to create the periodic e-reporting message on payment receipts to be sent to the PPF.

3.2.42.5 Obligations of Accredited Platforms (“Plateformes Agréées”) and VAT Registered entities

Obligations of Accredited Platforms (“Plateforme Agréée”):

- **Know how to process (check and transmit) an e-reporting message (flow 10) transmitted by its VAT Registered customer.**

Obligations of VAT taxpayers in France:

- **If they carry out international B2B sales, periodically produce an e-reporting message for their international B2B and B2C sales.**
- **If they carry out international B2B sales subject to VAT on collection and for which VAT is not paid by the customer, periodically produce an e-reporting message for international B2B sales and B2C sales.**
- **If it makes intra-Community B2B acquisitions (of goods or services) or purchases services outside the EU, it must periodically produce an international B2B acquisition e-reporting message.**

Optional services of Approved Platforms or Compatible Solutions:

- **Offer services for the creation of individual e-reporting records (10.1, 10.2, 10.3, 10.4) based on international B2B invoices issued or received, applying data extraction and mapping rules described in Standard XP Z12-012 and additional Business Rules or completion functions by the VAT Registered entity for missing information.**
- **Offer e-reporting unit record aggregation services during the VAT Registered entity's e-reporting periods to create the e-reporting files (flow 10) expected by the CdD of the PPF.**

3.2.42.5.1 Case No. 43a: Triangular transactions

A triangular transaction involves three parties established in three EU countries carrying out a three-way transaction as follows:

- Seller A, located in EU Member State A, sells goods to Intermediary Buyer B, established in EU Member State B.
- Intermediary B sells the same goods to Buyer C, located in EU Member State C.
- Delivery is made directly from A to C.

As the goods are delivered from country A to country C, the application of VAT rules would require Intermediary B to register for VAT in country C in order to reverse charge its purchase from seller A in country C, then resell the goods to buyer C subject to local VAT. However, a simplification measure is provided for in VAT Directive 2006/112/EC, recently amended by the ViDA Directive, which allows Intermediary B to register only in its EU Member State B.

In this case,

- A declares an intra-Community supply,
- B does not declare an intra-Community acquisition and does not reverse charge VAT on its purchase of the goods. Its sales invoice is an intra-Community supply with VAT reverse charged by the customer C, who must also mention that this is a triangular transaction.
- C makes an intra-Community acquisition and self-assesses the VAT.

Invoicing is done as follows (for electronic invoices):

- Sales invoice from A to B:
 - ✓ Seller: A
 - ✓ Buyer: B
 - ✓ Ship to (delivery address): C

- ✓ VAT: "Intra-Community supply" (K, VATEX-EU-IC, "VAT exemption – Intra-Community supply – Article 138 Directive 2006/112/EC"). A specific VATEX code could be useful to indicate a triangular transaction without reverse charge VAT by B. *To be discussed in the context of European work on the implementation of ViDA.*
- Sales invoice from B to C:
 - ✓ Seller: B
 - ✓ Buyer: C
 - ✓ Ship to (delivery address): C
 - ✓ VAT: "Intra-Community supply" (K, VATEX-EU-IC, "Reverse charge – Article 141 Directive 2006/112/EC – Triangular transaction"). A dedicated VATEX code would be useful to indicate that this is a triangular transaction without e-reporting by B and with reverse charge of VAT by C. *To be discussed as part of the European work on the implementation of ViDA.*
 - ✓ "Triangular transaction" reference: must be included on the invoice. The reference "Reverse charge – Article 141 Directive 2006/112/EC – Triangular transaction" as grounds for VAT exemption allows this to be mentioned.

As for the application of the reform in France, the consequences are as follows, depending on which party is established in France:

- If Seller A is in France (taxable person): their sale is a standard intra-Community supply of goods, which is subject to international B2B e-reporting, giving rise to a 10.1 flow.
- If intermediary B is in France (taxable):
 - ✓ As B does not self-assess VAT on its purchase from A due to the simplification measure for triangular transactions, it does not have to report this acquisition electronically.
 - ✓ As the resale from B to C is part of a triangular transaction leading to VAT exemption for B in country B and reverse charge VAT for C in country C, B is also not required to e-report this international B2B sale.
- If C is in France: C makes an intra-Community acquisition with VAT reverse-charged by the purchaser. It must therefore submit an e-report for acquisitions with reverse-charged VAT, and therefore, in its 10.1 flow:
 - ✓ TT-54: VAT base as shown on the invoice (in the VAT breakdown with category code K).
 - ✓ TT-55: Amount of reverse-charged VAT, i.e., obtained by multiplying the tax base by the applicable VAT rate, as recorded in the accounts for reverse-charged VAT.
 - ✓ TT-56: VAT category code: enter the code "AE," as this is reverse-charged VAT from the perspective of the taxable purchaser C.
 - ✓ TT-57: VAT rate applicable for reverse charge VAT, as recorded in the accounts for reverse charge VAT.
 - ✓ TT-58: Reason for exemption in text: corresponding to the situation: "Reverse charge – Article 141 Directive 2006/112/EC – Triangular transaction."
 - ✓ TT-59: Reason for exemption in code: VATEX-EU-AE, pending the possible introduction of a VATEX code specific to this situation.
 - ✓ TT-52: the sum of TT-55, converted into EUR if in another currency.

Obligations of Accredited Platforms ("Plateformes Agréées"):

- **Know how to process (check and transmit) an e-reporting message (flow 10) transmitted by its VAT Registered customer.**

Obligations of Actors:

- **Know how to manage a triangular transaction and the simplification measure, with its consequences on the data to be provided in invoices and in international B2B e-reporting (flow 10.1).**

3.2.42.5.2 Case No. 43b: Stock transfers treated as intra-Community supply

When a company transfers stock between two European Union member states, this is treated as an intra-Community supply.

This transaction does not necessarily give rise to an invoice, but to another supporting document, which may be, for example, a pro forma invoice (which is not an invoice), following its own numbering series.

These transactions give rise to an e-reporting record (flow 10.1), either for international B2B sales (when France is the country of departure for the stock transfer) or for international B2B acquisitions (when France is the destination country for the intra-Community stock transfer).

If the supporting document is a pro forma invoice, it can be exchanged electronically, but it is a non-reform document. Its number can then be used for the invoice number in flow 10.1 (TT-19). The type code (TT-21) must then be equal to "380" to comply with the PPF CdD control business rules on invoice type codes.

Next, in the event of a transfer of stock from France to another EU member country, the e-reporting must be completed as follows:

- Seller ID (TT-33): SIREN number of the taxable person (TT-33-1 = 0002).
- Seller's VAT number (TT-34): VAT number in France.
- Buyer ID (TT-37): SIREN number of the taxable person (TT-37-1 = 0002), i.e. the same as for TT-33.
- BUYER's VAT number (TT-38): VAT number of the taxable person in the destination country (different from TT-34).
- VAT category: K, with VAT exemption reason equal to VATEX-EU-IC ("VAT exemption – Intra-Community supply – Article 138 Directive 2006/112/EC").
- No VAT (TT-52 = 0)

In the event of a transfer of stock from an EU member country to France, the e-reporting must be completed as follows:

- Seller ID (TT-33): SIREN number of the taxable person (TT-33-1 = 0002).
- Seller's VAT number (TT-34): VAT number in the country of departure of the stock.
- Buyer ID (TT-37): SIREN number of the taxable person (TT-37-1 = 0002), i.e. the same as for TT-33.
- BUYER'S VAT number (TT-38):
- VAT number of the taxable person in France.
- VAT category: AE, with VAT exemption reason equal to VATEX-EU-AE / "Reverse charge"
- VAT amount (TT-52): amount of self-invoiced VAT in EURO
- VAT breakdown (TG-23), by reverse charge VAT rate (if several)
 - ✓ Base (TT-54) = reverse charged amount excluding VAT,
 - ✓ VAT amount (TT-55): reverse-charge VAT,
 - ✓ VAT category (TT-56): AE,
 - ✓ Reason for exemption (TT-58 / TT-59): VATEX-EU-AE / "Reverse charge".

NOTE: a stock transfer can also be made from France to a country or territory considered outside the EU for tax purposes (for example, in the context of a local sale in the destination country after stock transfer). In this case, there is no obligation to transmit a 10.1 flow for this transfer of stock outside the EU.

Obligations of Accredited Platforms ("Plateformes Agréées"):

- **Know how to process (check and transmit) an e-reporting message (10.1 data flow) transmitted by its VAT Registered customer.**

Obligations of Actors:

- **Know how to produce the information necessary to compile the 10.1 data flow record for the required international B2B e-reporting.**

3.2.43 Case No. 44: Transactions with entities established in the DROMs/COMs/TAAFs

3.2.43.1 Scope of the reform applicable in the DROMs, COM, and TAAF

The DROMs (Overseas Departments and Regions), COMs (Overseas Collectivities), and TAAFs (French Southern and Antarctic Lands) are divided into three geographical areas, resulting in two groups from a tax perspective:

- The DROMs of Martinique, Guadeloupe, and Réunion, which are considered part of “France” for tax purposes along with mainland France, although they benefit from specific VAT rates.
- The DROMs of French Guiana and Mayotte are excluded from the territory of application of VAT and are therefore considered as export territories (outside the EU).
- The COMs and TAAFs are also excluded from the territory of application of VAT and are therefore considered as export territories (outside the EU), like French Guiana and Mayotte.

The rules for applying the reform are therefore based on this classification, which consists of two groups:

- The “France” group for VAT purposes, comprising mainland France, Guadeloupe, Martinique, and Réunion.
- The “Export” group for VAT purposes: French Guiana, Mayotte, the overseas departments (COM), and the overseas collectivities (TAAF).

For example:

- Transactions within the “France” group, for example between Guadeloupe and mainland France, are subject to the electronic invoicing requirement.
- Transactions involving the sale of goods from Guadeloupe to French Guiana are therefore considered international B2B export sales, subject to B2B sales e-reporting by the taxpayer established in Guadeloupe.
- Transactions involving the sale of goods from French Polynesia (COM) to Réunion constitute an import of goods and are therefore excluded from international B2B e-reporting of acquisitions.
- Transactions involving the sale of services from French Polynesia (COM) to Réunion constitute an acquisition of services, which must be subject to international B2B e-reporting of acquisitions by the taxpayer based in Réunion.

This has an impact on the country codes to be used in the addresses of the parties (SELLER or BUYER) and on what needs to be transmitted in flows 1 and 10.1.

In fact, there are several practices for the use of country codes:

- Use of FR, meaning that it is a French territory, mainly for the DROMs.
- Use of the ISO 3166 code corresponding to the geographical area, namely:
 - ✓ French Guiana: GF
 - ✓ French Polynesia: PF
 - ✓ French Southern Territories: TF
 - ✓ Guadeloupe: GP
 - ✓ Martinique (la): MQ
 - ✓ Mayotte: YT
 - ✓ New Caledonia (la): NC
 - ✓ Reunion (La): RE
 - ✓ Saint Barthélemy: BL
 - ✓ Saint Martin (French part): MF
 - ✓ Saint Pierre and Miquelon: PM
 - ✓ Wallis and Futuna: WF

In flow 1, which only applies to transactions within the France group (Metropolitan France, Guadeloupe, Martinique, Réunion), only the country code “FR” should be used for each of the Parties.

In flow 10.1, for entities established in the “France” group for VAT purposes, the country code must be set to “FR.” A mapping rule is therefore necessary if the country code of the underlying invoice is “GP,” “MQ,” or “RE.”

Conversely, for French Guiana and Mayotte, if the country code is “FR,” it must be replaced with ‘GF’ or ‘YT,’ respectively. A mapping rule is therefore also necessary, based, for example, on the postal code (beginning with 973 for French Guiana and 976 for Mayotte).

Obligations of Accredited Platforms (“Plateformes Agréées”):

- **Know how to process the minimum base formats and profiles and create flow 1 by applying the mapping rules (in particular the one on the country codes of BR-FR-MAP-14 actors).**

Optional functionality of Accredited Platforms (“Plateformes Agréées”):

- **Assist taxpayers in creating flows 10.1, taking into account the specific characteristics of the DROM/COM.**

3.2.43.2 Port Tax (« Octroi de mer »)

The Port Tax (Octroi de mer) is a tax collected for the benefit of local authorities in the overseas departments (Guadeloupe, French Guiana, Martinique, Mayotte, and Réunion) that applies to:

- Imports of goods ;
- Deliveries of goods, made for consideration, by taxable persons who carry out production activities there (manufacturing, processing, or renovation of tangible personal property; agricultural and extractive operations) and whose annual revenue from their production activities exceeds €550,000.

Services are excluded from the scope of this tax. There may also be a regional Port Tax (Octroi de mer) tax with the same tax base as the national dock dues tax.

Dock dues must be included on invoices for goods delivered to another taxable person when the goods are delivered for consideration by the persons who produced them. (Law No. 2004-639 of July 2, 2004, on the dock dues)

The dock dues may potentially apply to each invoice line item, similar to VAT and in parallel with VAT. It therefore cannot be treated as a line-item tax (to which VAT would apply).

To implement the Port Tax (« Octroi de mer »), the EXTENDED-CTC-FR profile (or EXTENDED from factur-x) SHALL be used.

The Port Tax (« Octroi de mer ») requires the following information to be specified on each line / for each item:

- a reference for selecting a regulatory nomenclature.
- an applicable rate

To do this, it is proposed to use attributes with the name (BT-160) “OM_REFNC” to identify the reference and “OM_TAUX” to identify the applicable rate, followed by the corresponding value in BT-161. To indicate the rate, enter 1.50 for a rate of 1.50%.

Next, a pre-tax base amount per applicable rate should be added at the bottom of the invoice, followed by the corresponding dock dues amount, which must therefore equal the sum of the pre-tax line totals (BT-131) and, potentially, document-level charges and discounts, excluding dock dues, for which the applicable rate is the rate entered in BT-101.

It is proposed to use the document-level charges, grouped by applicable rate, with the following data:

- Text description (BT-104): OCTROI_MER
- Code description (BT-177, tax excluding VAT): “IMP”
- List No. (BT-177-1): 5153
- Pre-tax base (Tax base: BT-100): the pre-tax amount subject to the dock dues at the rate entered in BT-101
- Applicable rate (BT-101): rate (e.g., 1.50 or 2.50 to indicate 1.50% or 2.50%)
- Port tax amount for the charge block (BT-99)
- VAT type code (BT-102): “O” because the dock dues themselves are outside the scope of VAT.
- VAT rate (BT-103): none, because the EN16931 standard requires that there be no VAT rate when the type code is “O.”

- Exemption reason code (EXT-FR-FE-190): VATEX_EU-O
- Exemption reason (text) (EXT-FR-FE-189): OCTROI_MER

A block of charges and taxes excluding VAT is calculated based on the applicable dock dues rate.

The values VATEX-EU-O and OCTROI_MER for the exemption reason (EXT-FR-FE-190 and EXT-FR-FE-189) will generate a dedicated VAT breakdown line for the dock dues.

The example below illustrates how to implement dock dues in an invoice.

Lines													
Line ID	Item name	Net Unit Price	Invoiced Quantity	Unit of measure	Attribute name	Attribute Value	Attribute name	Attribute Value	VAT code	VAT rate	VATEX code	VATEX text	Line Total amount
BT-126	BT-153	BT-146	BT-129	BT-130	BT-160	BT-161	BT-160	BT-161	BT-151	BT-152	EXT-FR-FE-179	EXT-FR-FE-178	BT-131

OCTROI_MER		IMP	5153	197,00	1,50%	O		VATEX_EU-O	OCTROI_MER	2,96
OCTROI_MER		IMP	5153	201,00	2,50%	O		VATEX_EU-O	OCTROI_MER	5,03

Ventilation TVA					
Base	VATEX text	VATEX code	VAT code	VAT rate	VAT Amount
BT-116	BT-120	BT-121	BT-118	BT-119	BT-117
95,00			S	2,10%	2,00
303,00			S	8,50%	26,00
7,99	OCTROI_MER	VATEX_EU-O	O		0,00

TOTALS			
Total LINES (BT-106)	398,00	Total without VAT (BT-109)	405,99
Total Allowances (BT-107)	0,00	Total VAT (BT-110)	28,00
Total Charges @Taxes (BT-108)	7,99	Total with VAT (BT-112)	433,99

Figure 58: Sample Invoice Including Port Tax ("Octroi de mer")

The attributes correspond to the data in the blue boxes, with the attribute name in BT-160 and the value in BT-161. All rates are displayed with the "%" symbol for visual clarity, but the data in the structured file must not include this symbol.

The pink "Document" level expense and tax lines illustrate how to specifically report the dock dues. Here, there are two lines because there are two applicable rates (1.50% and 2.50%).

The VAT breakdown consists of two lines corresponding to the billing lines (with VAT rates of 8.50% and 2.1%, respectively), and the pink line is used to provide the total amount of the dock dues, which must equal the sum of the "Document" level expense and tax lines that also share the same pair of exemption codes (VATEX-EU-O / OCTROI_MER).

Obligations of Approved Platforms:

- **Be able to process the minimum standard formats and profiles (invoices and lifecycle statuses).**

Obligations of SELLERS (or their service providers responsible for creating invoices with Octroi de mer):

- **Comply with the provisions of this chapter to include the OCTROI de MER code on invoices.**

3.3 Sector-Specific Applications

This chapter aims to describe sector-specific characteristics and to apply the generic use cases from Chapter 3.2 to the relevant sector.

3.3.1 Media Sector – Advertising Space Purchasing

3.3.1.1 Context

Once an advertising message is made available in France, the purchase of advertising space is subject to the **Sapin Act** and, as such, is organized through MEDIA AGENCIES that handle, on behalf of and for the account of their BUYER clients—referred to as “ADVERTISERS”—reservation (an important concept to establish that the order reference belongs to the agency and not the client) and the purchase of advertising space from SELLERS, namely ADVERTISING NETWORKS.

Media AGENCIES act as transparent intermediaries on the BUYER side, also responsible for processing (verifying) the advertising networks’ invoices and very often for their payment on behalf of the ADVERTISER, based on fund calls (AF) or disbursement reports (CRD) issued by the Media AGENCY to the ADVERTISER.

This leads to the application of use case No. 15: “Sales Invoice following an order (and potential payment) by a third party acting in the name and on behalf of the BUYER.”

As a reminder and for context, the parties involved are as follows:

- The advertising agency, which is the SELLER (BG-4), and which uses a PA-E platform for issuing invoices,
- The ADVERTISER, who is the BUYER (BG-7), and must designate an email address for receiving electronic invoices at which they wish to receive their invoices for the purchase of advertising space, and entrust it to an Approved Platform, which may be:
 - ✓ either the one it primarily uses for all its purchases (the PA-R),
 - ✓ or (**and this is strongly recommended**) an email address for receiving invoices specific to its advertising space purchases, as proposed by its Media Agency and to which the Media Agency has access to process invoices on its behalf (the PA-TR).
- The Media Agency, which is the BUYER’S AGENT (EXT-FR-FE-BG-01), the third party authorized to place orders in the name and on behalf of the ADVERTISER and, where applicable, to verify and pay invoices from ADVERTISING AGENCIES, and which uses an Approved PA-TR Platform that offers tailored services (delegation of rights regarding invoices from ADVERTISERS hosted on the same PA-TR, funds request process, transmission of Expense Reports, etc.).

As a reminder, invoices must be sent by the MEDIA AGENCY to the ADVERTISER (and not to the Media Agency), that is, from an Approved Platform chosen by the ADVERTISING AGENCY (PA-E) to issue its invoices, to an email address designated by the ADVERTISER for receiving electronic invoices, which the ADVERTISER (in consultation with its Media Agency) chooses to entrust to an Approved Platform.

NOTE: The Media AGENCY’s fee invoices to its client, the ADVERTISER, have no specific requirements. They are therefore transmitted by the Media Agency to the Advertiser through their own Approved Platforms if they fall under the reform when the Media Agency and the Advertiser are subject to VAT in France. They are not included among the invoices whose processing is described in this chapter.

The invoice attachment in PFP (Pivot Facture Publicité) XML format

The media sector has agreed on a structured (XML) message containing enriched billing data, known as PFP (Pivot Facture Publicité), which, under the pre-electronic invoicing reform system, is transmitted by certain ADVERTISING AGENCIES to the Media Agency’ ly with the direct transmission of the invoice to the ADVERTISER. This document can be very useful for the Media Agency to process the invoice more effectively. In practice, it serves as an appendix to the invoice and is therefore intended—when the advertising agency is able to produce it—to be attached to the electronic invoice so that the Media Agency can use it to process the invoice.

The Disbursement Report and Fund Calls.

The Disbursement Statement (CRD) is a financial document sent by the Media Agency to the Advertiser, allowing the Media Agency to request funds based on the invoices issued by the Advertising Agencies to the Advertiser. The CRD serves as a “statement of Advertising Agency invoices due.”

The Request for Funds (AF) is a financial document sent by the Media Agency to the Advertiser, allowing the Media Agency to request funds based on a quote approved by the Advertiser, without waiting for the media agency’s invoice. The Call for Funds therefore does not refer to any RÉGIE invoice but to the Purchase Order sent by the ADVERTISER to its Media Agency.

The mechanism for fund calls or expense reports is not being called into question. They are not subject to additional VAT by the Media Agency and are therefore outside the scope of the Reform.

This implies:

- it is not possible to issue invoices containing both “funding requests” lines not subject to VAT and fee lines subject to VAT within the EN16931 standard profile (only the EXTENDED-CTC-FR profile allows this). For operational reasons, it is strongly recommended in any case to distinguish between the documents:
 - ✓ fees, which, like any other service not subject to the Sapin Law, must be invoiced (and electronically under the reform if the MEDIA AGENCY and the ADVERTISER are subject to VAT),
 - ✓ funding requests or expense reports, which are not invoices (outside the scope of the reform) and must be sent separately.
- that the management of Requests for Funds and Disbursement Reports between the Media Agency and the Advertiser must be organized either outside the PA system or within the PA system but via specific workflows outside the scope of the reform (depending on the capabilities of each PA in this regard).

3.3.1.2 Selection by the ADVERTISER of the email address for receiving electronic invoices for the purchase of advertising space created by the ADVERTISING AGENCIES

The first recommendation is therefore to define a dedicated email address for receiving electronic invoices for the purchase of advertising space, such as SIRENAnnonceur_ACHATPUB (following the SIREN_SUFFIX format). This allows these invoices to be separated from others, as they require special handling.

The suffix ACHATPUB is an example and should be treated as such. Furthermore, since an ADVERTISER may use multiple Media Agencies, it may be necessary to distinguish between the invoices managed by each of them (particularly if they are subsequently managed on different PA-PIVOTs, see below). The standard practice when working with the public sector is to use a GLN identifying the media agency in addition (or its SIREN number). The email address for receipt can then take the form “SIRENAdvertiser_ACHATPUB-GLNAgency.” In the remainder of this document, we will use SIRENAdvertiser_ACHATPUB by convention.

This also allows for a subsequent decision as to whether this address is assigned to the ADVERTISER’s primary Approved Platform (PA-R) or to a specialized Approved Platform, generally proposed by the Media AGENCY (PA-TR). This choice is made by the ADVERTISER, in consultation with the Media AGENCY. The selected Approved Platform (the PIVOT Platform) will then populate the PPF directory with this address for receiving electronic invoices (and credit notes).

If this recommendation to use a dedicated email address **is not followed, the consequences for the ADVERTISER are as follows:**

- Invoices for the purchase of advertising space will be received along with all other invoices on the ADVERTISER’s PA-R. It is therefore necessary for this PA-R, or the Compatible Solution, or the ADVERTISER’s management solution to be able to identify them in order to assign a specific processing workflow. This begins, moreover, with the ADVERTISER ensuring that it does not generate its own processing statuses for these invoices (as it does for its other invoices), since it has entrusted the responsibility for monitoring them to the Media Agency.
- Since these invoices are received via its PA-R Approved Platform, the following steps must then be taken:
 - ✓ Either grant the Media Agency access to these invoices, which requires the Agency to log in to the Advertiser’s system (its PA, SC, or a component of its IT system) and be granted permissions to set statuses on behalf of the Advertiser. This may lead Media Agencies to connect to a wide variety of systems or PAs (potentially one per ADVERTISER client), with all the resulting management complexity (including security aspects), which risks significantly limiting their willingness to proceed in this manner.

- ✓ Or, forward the invoices to the Media Agency and wait for feedback from them. This can be done by any means, and likely via email initially, which is not best practice if the goal is automated and secure processing.
- Then, based on the Media Agency's feedback, the Advertiser creates and transmits the corresponding lifecycle statuses via its PA-R.
- Finally, depending on the chosen solution, the Media Agency may have limited access to the lifecycle statuses actually transmitted by the Advertiser, as well as those received, which will not facilitate its role in managing invoices with regard to the Ad Networks, particularly in the event of a dispute.

For all these reasons, this approach is not recommended.

3.3.1.3 Selection of the Approved Platform responsible for receiving invoices for the purchase of advertising space, under the ADVERTISER's control.

If the above recommendation is followed and a dedicated email address is therefore created, the next step is to choose the Approved Platform to which this email address for receiving electronic invoices will be entrusted, referred to as **the PA-PIVOT** in the remainder of this chapter.

This **PA-PIVOT** must reference both the ADVERTISER and the Media Agency, and more generally other third parties involved in processing the invoice on the receiving end (for example, a third-party payer when using a barter company, see use case 41), in order to organize the flow of invoices and statuses between these parties, and provide features allowing the Media Agency to act on the Advertiser's invoices on its behalf, by delegation.

It should be noted that the presence of third parties in invoices can help organize access rights or actions on the invoices. On the other hand, this may represent an additional constraint for the SELLER. Regarding the purchase of advertising space, ADVERTISING AGENCIES already list Media Agencies on their invoices, which allows them to continue doing so on electronic invoices by using the EXTENDED-CTC-FR profile in EXT-FR-FE-BG-01. This allows the PIVOT PA receiving these ADVERTISING AGENCY invoices to manage rights and delegations while accounting for the presence of the Media AGENCY on the invoices.

However, these rights can also be organized independently by the PIVOT PA based on a Media AGENCY account (as well as accounts of other third parties such as a BARTER company, see case 41) and an ADVERTISER account, for which access rights are implemented independently for each party, followed by the AGENCY's delegation rights over the ADVERTISER, implementing the Media AGENCY's management mandate on behalf of the ADVERTISER. Consequently, the ADVERTISER is indeed a user of the PIVOT PA, but not necessarily a client, since the creation of the email address for receiving electronic invoices for advertising space purchases and the associated ADVERTISER account may be part of the Media Agency's management mandate as part of a comprehensive service that includes the creation of the SIRENAnnonneur_ACHATPUB (through the "formal agreement" designating an email address for receiving electronic invoices), the selection of the PA PIVOT for this email address, and its contractual management on behalf of the ADVERTISER.

The PA PIVOT must then organize communication between the various stakeholders, namely:

- via the standard API covered by Standard XP-Z12-013 used by the Media Agency and/or the ADVERTISER (or their respective platforms). This requires that the Media Agency and the ADVERTISER have their own access rights and credentials ("their credentials"). The same may apply to access by other third parties, such as a third-party PAYER, which may be a barter company (see case no. 41).
- or through the exchange of status and invoice files via the PEPPOL network. This functions like a messaging system with standardized messages and email addresses. Therefore, both the Media Agency and the Advertiser must each have an email address for these exchanges (see below), referenced on the PIVOT PA for each of them. The same may apply to exchanges with other third parties, such as a third-party PAYER (), which may be a barter company (see case no. 41), and which must therefore be listed with an email address for receiving standardized messages.
- Or, where applicable, through a direct connection with the Media Agency and/or the Advertiser (or their respective platforms), which falls under a proprietary (and therefore non-standardized) framework. The same may apply to the organization of communications with any other third party (such as a third-party payer of the barter company type; see case no. 41).

Two situations then arise:

- **OPTION 1:** The PA-PIVOT is provided by the Media Agency (PA-TR), which may be part of its management mandate. This PA-TR must therefore allow the ADVERTISER (and likely its own PA-R or Compatible Solution) access to invoices and their lifecycle (via the standard API, or by exchanging statuses and invoices through the PEPPOL network). The ADVERTISER only needs to view invoices and their lifecycle to manage their accounting and tax processing. This can be done very easily using the Standard API described in the XP Z12-013 standard. **This is the highly recommended option.**
- **OPTION 2:** The PA-PIVOT is the ADVERTISER's (PA-R), which must therefore provide the most standard access possible to the Media Agency (via its PA-TR or Compatible Solution) and a division of roles allowing the Media Agency to perform the actions the ADVERTISER has entrusted it to carry out on its behalf, as part of the advertising purchase management mandate. This option requires the Media Agency:
 - ✓ either to connect to the ADVERTISER's PA-R and process the invoice. It then requires specific permissions, given that media buying was managed on its own systems. This results in dual processing: first within the Media Agency's system for review and approval, then by entering the result into the Advertiser's PA-R.
 - ✓ Or for the ADVERTISER's PA-R to organize a two-way exchange of invoices and statuses with the Media Agency's PA-TR or Compatible Solution, in order to, on the one hand, send the invoices to be processed and, in return, receive the processing statuses that it must forward to the ADVERTISING AGENCY and the PPF in the case of the "Rejected" status ".

3.3.1.4 Management of email addresses in invoices

Before detailing the two options below, it is important to clarify how the various email addresses are created and used in invoices:

- The ADVERTISER's email address (e.g., SIRENAnnonceur_ACHATPUB) must be entered in BT-49 within the BG-7 block describing the BUYER.
- The ADVERTISING AGENCY's (SELLER's) email address must be entered in BT-34 (in block BG-4 describing the SELLER). This is the address to which the ADVERTISING AGENCY (SELLER) wishes to receive its status updates (see section 1.4.5.2).

Since the ADVERTISING AGENCY is not intended to send anything directly to the Media Agency, **it is not necessary** to enter the Media Agency's email address in EXT-FR-FE-12 of block EXT-FR-FE-BG-01.

3.3.1.5 Use of the Standard API to allow the ADVERTISER and/or the Media Agency to access invoices and lifecycle data on the PA PIVOT.

Once the PA PIVOT has registered the ADVERTISER or the Media Agency as a user, with access rights restricted to invoices for the purchase of advertising space, the ADVERTISER or the Media Agency may use the Standard API to access invoices and statuses.

This method is particularly suitable for OPTION 1, where the ADVERTISER simply needs their API login credentials with the PA-TR to access received advertising space purchase invoices, as well as their lifecycle.

For OPTION 2, the Media Agency can similarly access invoices received by the Advertiser on the PA-R. However, this requires the agency to maintain multiple access credentials for each of its clients across a wide variety of Approved Platforms.

3.3.1.6 Management of status and invoice exchanges via the PEPPOL network

PEPPOL can be used for data exchanges between PA-PIVOT and the ADVERTISER's platforms (OPTION 1) or the Media AGENCY's platforms (OPTION 2).

To do this, PEPPOL email addresses are required for both parties:

- An email address for the Media Agency, which may be dedicated to this purpose, for example of the type SIRENAgence_MANDATGESTION, which may be assigned to a PEPPOL Access Point of the Media Agency at the level of its PA-TR or its Management Solution. It is not intended to be listed in the PPF Directory since it is not supposed to receive electronic invoices.
- An email address for the ADVERTISER, which may be dedicated to this purpose, such as SIRENAdvertiser_MEDIAAGENCYMANDATE or SIRENAdvertiser_THIRD-PARTYINVOICEMANAGEMENT,

which may be assigned to a PEPPOL Access Point of the ADVERTISER at the level of its PA-R or its Compatible Solution. It is not intended to be listed in the PPF Directory since it is not supposed to receive electronic invoices directly from VENDORS. The ADVERTISER may nevertheless decide to use its email address for receiving electronic invoices if its PA-R is subsequently able to identify these flows and act as a Compatible Solution with respect to the PIVOT PA.

As a reminder, the use of the PEPPOL network for the exchange of received invoices between the Media Agency and the Advertiser is carried out via the Lifecycle Status (CDAR) message, with specific status values indicating the reason for the exchange (for example, “transmission of the invoice or its lifecycle statuses” or “request for review and validation,” or “request for review, validation, and payment” ...) to which the invoice may be attached.

As indicated in section 3.2.1.2, in practical terms, PEPPOL exchanges operate on the basis of email addresses to be entered in an envelope (SBDH), identifying on the one hand the sender (referred to as C1), whose email address corresponds to the address to which responses must be sent, and on the other hand the recipient (referred to as C4) to whom the lifecycle status message is addressed. The PEPPOL network protocol then uses these email addresses (referred to as “EndPoints”) to determine which PEPPOL Access Point (i.e., the recipient’s platform) is responsible for the recipient’s address and to securely transmit the status message.

For example, if the MEDIA AGENCY wishes to send invoices and lifecycle status messages to the ADVERTISER:

- The envelope (SBDH) will contain as address C1 0225:SIRENMediaAgency_ManagementMandate (or any other “EndPoint” email address accepted in the PEPPOL network), and as recipient address (C4) 0225:SIRENAdvertiser_MediaAgencyMandate.
- The Lifecycle message will identify:
 - ✓ The Media Agency (BUYER’s AGENT) as the message creator (MDG-16)
 - ✓ The ADVERTISER (BUYER) as the recipient (MDG-23),
 - ✓ The invoice as the “Subject of the Response” (MDG-32), in which:
 - The identification data for the invoice to be paid will be provided (Invoice Number, Invoice Date, and SELLER ID).
 - The invoice will be attached (MDT-96).
 - A status code indicating “transmission of the invoice or its lifecycle statuses” will be provided in MDT-105.
 - The status detail block (MDG-37) may be used to transmit a lifecycle history.

If the ADVERTISER wishes to transmit an invoice for the purchase of advertising space to the Media AGENCY for processing:

- The envelope (SBDH) will contain, for example, the C1 address 0225:AdvertiserSIREN_MEDIAAGENCY_MANDATE, and the Media Agency’s third-party address (C4) 0225:AgencySIREN_MANAGEMENT_MANDATE (or any other “EndPoint” email address accepted in the PEPPOL network).
- The Lifecycle message will identify:
 - ✓ The ADVERTISER (BUYER) as the message creator (MDG-16)
 - ✓ The Third-Party Media Agency (BUYER’s AGENT) as the Recipient (MDG-23),
 - ✓ The invoice as the “Subject of the Response” (MDG-32), in which:
 - The identification data for the invoice to be paid will be provided (Invoice Number, Invoice Date, and SELLER ID).
 - The invoice will be attached (MDT-96).
 - A status code meaning “request for review, validation, and payment” will be provided in MDT-105.

At each processing stage, the Media Agency may transmit the corresponding lifecycle status:

- The envelope (SBDH) will contain as address C1 0225:SIRENAgence_MANDATGESTION, then as recipient address (C4) 0225:SIRENAnnonceur_MANDATAGENCEMÉDIA.
- The Life Cycle message will identify:

- ✓ The Third-Party Media Agency (BUYER'S AGENT) as the message creator (MDG-16)
- ✓ The ADVERTISER (BUYER) as the Recipient (MDG-23),
- ✓ The invoice as the "Subject of the Response" (MDG-32), in which:
 - The identification data for the invoice to be paid will be provided (Invoice Number, Invoice Date, and SELLER ID).
 - A status code corresponding to the processing stage in MDT-105.
 - And all other necessary information (reasons, status details).

The ADVERTISER can then use this status message to create the one they must send to the SELLER (in this case, the MEDIA AGENCY).

3.3.1.7 **OPTION 1: The PA PIVOT is the PA-TR proposed by the Media Agency, tailored to specific needs**

In this option, the Media Agency proposes to include in its management mandate the selection of the PA-TR for the dedicated email address for receiving electronic invoices (e.g., AdvertiserSIREN_ACHATPUB), leading the Media Agency to sign a formal agreement designating an Approved Platform for receiving electronic invoices on behalf of the ADVERTISER and for the dedicated address (SIRENAnnonceur_ACHATPUB).

Specifics:

- The PA-TR (Approved Pivot Platform) is the one proposed by the Media Agency (Buyer's Agent).
- The ADVERTISER's dedicated media billing email address (e.g., SIRENAnnonceur_ACHATPUB) must be registered by the PA-TR in the PPF Directory and assigned to the PA-TR, either upon direct request by the ADVERTISER or by the Media Agency on its behalf if it has been authorized to do so.
- The Media Agency and the Advertiser (or the Media Agency alone on behalf of the Advertiser if it has been authorized to do so) shall configure, via the PA-TR, the access rights of the Advertiser and the Media Agency to the Advertiser's advertising space purchase invoices received at the dedicated billing email address (SIRENAnnonceur_ACHATPUB), as well as the Media Agency's delegation rights regarding the management of these invoices, in fulfillment of its management mandate (invoice processing, validation, payment on behalf of the ADVERTISER, and, where applicable, requesting funds, etc.).
- The ADVERTISER is a user of the PA-TR Certified Platform selected by the Media Agency (or its "Compatible Solution" component) and has the ability to access its invoices and their lifecycle in two possible ways:
 - ✓ via the XP-Z12-013 standard data feed API, which they use either directly or through their Compatible Solution or their own PA used for most of their purchases. To do so, they must have access rights for the API (Client ID and Client Secret, to be entered in the API). These rights are normally limited to viewing/receiving their invoices and corresponding lifecycle stages. Additional features may also allow for the exchange of payment requests or Disbursement Reports (CRD) via a lifecycle status message.
 - ✓ by exchanging status and invoice files (CDAR) via the PEPPOL network, with these files containing the invoice when it is to be transmitted to the ADVISER. In this case, the PA-TR must know a PEPPOL email address (EndPoint) for the ADVERTISER, which may be its generic address for receiving invoices and statuses, or an address dedicated to these exchanges with its third-party Media Agency (depending on how the ADVERTISER wishes to manage its flows). When this mode is enabled, the PA-TR transmits the invoice and the details of the lifecycle history requested by the ADVERTISER via CDAR status messages. Additional features may also allow for the exchange of fund calls or Disbursement Reports (CRD) via a lifecycle status message.
- If the ADVISOR's PA-R is connected to the PA-TR, it acts as a "Compatible Solution" for these invoices since it is not responsible for the recipient address of these invoices, nor for issuing the processing and payment statuses for these invoices.

NOTE: If the connection between the PA-TR and the ADVERTISER is established directly from the PA-TR, the PA-TR must ensure that the API client or PEPPOL Access Point used by the ADVERTISER is hosted within the European Union.

Figure 59 : OPTION 1: The PA PIVOT is the Media Agency's PA-TR

In the diagram above, blocks 5a through 5e are present only if the Media Agency is also the Paying Party. Otherwise, the Advertiser has processing (and therefore approval) status via block 4c to proceed with direct payment.

Step	Step Name	Responsible party	Description
1	Creation of the invoice or credit note issued in the ADVERTISER's name and sent to SIRENAnnonceur_ACHATPUB	ADVERTISING AGENCY (SELLER)	The ADVERTISING AGENCY creates the invoice or credit memo via its information system. It may delegate this task to an OD/SC (Compatible Solution) or to its PA-E. It sends it to its PA-E for processing. These invoices identify the Media Agency as EXT-FR-FE-BG-01, or even EXT-FR-FE-BG-02 if the MEDIA AGENCY wishes to specify that the Media Agency is also a third-party payer (though this is primarily a matter between the Media Agency and the ADVERTISER).
2	Transmission of data stream 1, the invoice or credit memo, and related statuses	PA-E	The PA-E, having performed the regulatory compliance checks, including checks for duplicates and the existence of an active electronic billing address for the recipient, MUST transmit the data required by the Administration (Flow 1) to the CdD PPF. It MUST also transmit the invoice (Data Set 2 or Data Set 3) to the PIVOT PA responsible for the SIRENAnnonceur_ACHATPUB address, which in this case is the PA-TR proposed by the Media Agency. It must transmit the "Submitted" status to the PPF Data Center).
3a	Receipt of the invoice or credit note	PA-TR	The PIVOT PA-TR platform receives the invoice or credit memo (flow 2 or flow 3), performs regulatory checks, creates the transmission statuses (here "Received," then "Made Available"), and makes the invoice available to the ADVERTISER for processing, which allows the Media Agency to access it via delegated rights.

Step	Step Name	Responsible party	Description
3b	Viewing / Receipt of the invoice or credit note by the ADVERTISER	ADVERTISER / PA-TR	The ADVERTISER can access the invoice or credit note in two ways: • Either by using the standard API with the Client ID / Client Secret provided to them by the PA-TR. • Or because the PA-TR sends it via status messages attaching the invoice or credit note via PEPPOL.
4a	Processing the invoice or credit memo and updating statuses prior to payment	Media AGENCY (on behalf of the ADVERTISER)	The Media AGENCY processes the invoice or credit note on behalf of the ADVERTISER and sets the corresponding processing statuses with the PA-TR (statuses "Rejected," "Processed," "Disputed," "Approved," "Partially Approved," "Suspended," ...), via the PA-TR or the associated SC, for transmission to the ADVERTISING AGENCY through its PA-E. If the Media AGENCY performs its processing on its own Compatible Solution, it may transmit the lifecycle statuses to the PA-TR using the standard API, with its own login credentials (Client ID / Client Secret), by activating its delegation rights (if the PA-TR offers these features)
4b	Receipt of invoice statuses	ADVERTISING AGENCY (SELLER)	The ADVERTISING AGENCY receives the invoice statuses following the Media Agency's processing of the invoice in accordance with the terms of the lifecycle.
4c	Advertiser Access to the Lifecycle	ADVERTISER / PA-TR	The ADVERTISER can access the lifecycle status of the invoice or credit note in two ways: • Either by using the standard API with the Client ID and Client Secret provided by the PA-TR. • Or because the PA-TR sends them status messages attaching the invoice or credit memo via PEPPOL.
5a	Funds Request or Disbursement Report for payment by the Media AGENCY (as a third-party PAYER)	Media Agency	In the case of a payment mandate, AGENCE Média issues a request for funds (or sends a Disbursement Report: CRD) to the ADVERTISER. These requests for funds may be issued via the PA-TR through a lifecycle status message or by any other means, depending on the services offered by the Media Agency and its PA-TR and the terms of receipt agreed upon with the Advertiser.
5b	Receipt of the Fund Request or CRD by the ADVERTISER	ADVERTISER	Receipt of fund calls (or CRDs) from its Media Agency, in accordance with the agreed terms.
5c	Transfer of funds to the Media Agency	ADVERTISER	Transfer of funds to the Media Agency
5d	Receipt of funds by the Media Agency for payment of invoices	Media Agency	Receipt of funds for invoice settlement. Confirmation of payment and final verification of the invoice or credit memo in step 4a are two prerequisites for settling the invoice or credit memo with the RÉGIE.
5e	Payment of the invoice/credit memo Creation and transmission of the "Payment transmitted" status	Media AGENCY (Third-Party PAYER) / PA-TR	The Media Agency (Third-Party Payer) pays the invoice to the Advertising Network on behalf of the Advertiser. It may transmit a "Payment Forwarded" status (recommended) to the Advertising Network via the PA-TR. As with invoice processing, the procedures will be similar to those described in 4.a.

Step	Step Name	Responsible party	Description
5f	Access to invoices and lifecycle statuses corresponding to the invoice / credit memo	ADVERTISER / PA-TR	The ADVERTISER has access to the lifecycle statuses of the invoice or credit memo in two possible ways: • Either by using the standard API with the Client ID / Client Secret provided by the PA-TR. • Or because the PA-TR sends them via status messages attached to the invoice or credit memo via PEPPOL.
5g	Receipt of Payment Status Sent by the AGENCY	RÉGIE (SELLER)	The RÉGIE receives the "Payment Transmitted" status from its PA-E
6a	Receipt of invoice/credit note	RÉGIE (SELLER)	The AGENCY collects the invoice / credit memo (off-system).
6b	Issuance of the "Paid" status	AGENCY / PA-E	If the invoice's VAT is due upon receipt, the AGENCY creates the "Received" status and transmits it to the PPF Client via its PA-E. The PA-E also transmits the "Paid" status to the PA-TR for the attention of the ADVERTISER (to which the Media AGENCY has access via delegated rights).
6c	Receipt of the "Received" status	Media Agency and Advertiser PA-TR	The ADVERTISER receives the "Paid" status on the PA-TR, to which the Media Agency has access via delegated rights.
6d	Access to "Paid" statuses for the ADVERTISER	ADVERTISER PA-TR	The ADVERTISER has access to the lifecycle statuses of the invoice or credit note (here "Paid") in two possible ways: • Either by using the standard API with the Client ID and Client Secret provided by the PA-TR. • Or because the PA-TR sends it via status messages attaching the invoice or credit memo via PEPPOL.
7	Receipt of the "Paid" status by the PPF Contract Partner	PPF Data Hub	The PPF Data Hub (CdD PPF) receives the status "Received".

Parties	Actor Responsibilities	Optional Actor Features
<u>ADVERTISER (SELLER)</u>	➤ To include the Media AGENT on the invoice, use the EXTENDED-CTC-FR profile and enter the Media AGENCY in the "BUYER'S AGENT" block (EXT-FR-FE-BG-01) of the invoice.	➤ Submit the PFP as an attachment to the invoice for processing by the Media AGENCY.
<u>PA-E of the ADVERTISER</u>	➤ Know how to handle the minimum standard formats and profiles (invoice and CDAR).	
<u>Third-Party Media Agency</u>	➤ Work with the ADVERTISER to configure permissions on the PA-TR to allow the Media Agency to access invoices received at the dedicated email address set up by the ADVERTISER for their advertising space purchases (e.g., SIRENannonceur_ACHATPUB) and for the ADVERTISER to be able to access their advertising space purchase invoices received at this address. ➤ Process invoices and credit notes for advertising space purchases on behalf of the ADVERTISER, including setting the necessary processing statuses.	

Parties	Actor Responsibilities	Optional Actor Features
	➤ If the Media AGENCY acts as a third-party PAYER, organize the exchanges for fund calls or Disbursement Reports, then pay the invoices/credit notes on behalf of the ADVERTISER once the required conditions are met, and forward the corresponding lifecycle statuses to the PA-TR.	
<u>PA-TR (PA PIVOT)</u>	➤ Be able to process the minimum required formats and profiles (invoice and CDAR). ➤ Be able to grant the Media Agency third-party access to invoices/credit notes received at the ADVERTISER's email address for receiving electronic invoices/credit notes.	Organize access for the ADVERTISER via their OD/SC (Compatible Solution) or their PA-R (different from the PA-TR), so that they can view and integrate invoices/credit notes and their lifecycle statuses. This can be done either by implementing the standard API with the ADVERTISER as a client of this API (with its own access rights), or by using the status message exchange features via PEPPOL between the PA-TR and the PA-R or the ADVERTISER's SC/OD. Provide a solution for managing fund calls or Disbursement Reports between the Third-Party Media Agency and the ADVERTISER, and their use through the payment of invoices by the Third-Party Media Agency on behalf of the ADVERTISER.
<u>ADVERTISER</u>	➤ Be able to process the minimum standard formats and profiles (invoice and CDAR). ➤ Work with the Media Agency to configure access rights on the PA-TR system to allow the Media Agency to access invoices received at the dedicated email address opened by the ADVERTISER for its advertising space purchases (e.g., AdvertiserSIREN_ADBUY) and to allow the ADVERTISER to access its advertising space purchase invoices received at this address.	
<u>ADVERTISER's OD/SC (Compatible Solution) / PA-R</u>	➤ Be able to process the minimum required formats and profiles (invoice and CDAR).	➤ Be able to implement either the standard API or PEPPOL reception of the ADVERTISER's invoices and lifecycle messages received on the PA-TR. ➤ Interoperate with the Third Party's PA-TR to manage fund calls and their use to obtain the lifecycle statuses of "Payment Transmitted" or "Received," enabling the preparation of the deductible VAT return (if VAT on invoices/credit notes is due upon receipt).

3.3.1.8 OPTION 2: The PIVOT PA is the ADVERTISER's PA-R

In this option, the ADVERTISER has chosen to designate its PA-R to receive invoices for the purchase of advertising space. They must then coordinate with their Media Agency and their PA-R or SC to ensure the Media Agency has access to the invoices for processing, and to allow the Media Agency to report the lifecycle statuses back to the PA-R for the ADVERTISING AGENCY or the PPF (for the "Rejected" status).

Special considerations:

- The PA-R (Approved Pivot Platform) is the one designated by the ADVERTISER.

- The ADVERTISER's media-specific billing email address (e.g., SIRENAnnonceur_ACHATPUB) must be registered by the PA-R in the PPF Directory and assigned to the PA-R.
- The ADVERTISER configures on the PA-R the access rights of the ADVERTISER and the Media AGENCY to the invoices for the purchase of the ADVERTISER's advertising space received at the dedicated billing email address (SIRENAnnonceur_ACHATPUB), as well as the Media Agency's delegation rights regarding the management of these invoices, in fulfillment of its management mandate (invoice processing, validation, payment on behalf of the ADVERTISER, and, where applicable, requesting funds, etc.).
- The Media Agency is either a user of the ADVERTISER's PA-R Approved Platform (or its "Compatible Solution" designation) allowing it to access invoices/credit notes and the lifecycle of advertising space purchase invoices via API, or configured as a third party of the ADVERTISER accessible through the exchange of lifecycle status messages via PEPPOL, and thus has the ability to access these invoices/credit notes and their lifecycle in two possible ways:
 - ✓ via the XP-Z12-013 standard feed API, which it uses either directly or through its Compatible Solution or its own PA-TR. To do so, it must have access rights for the API (Client ID and Client Secret, to be entered in the API). These rights allow both access to invoices/credit notes for the purchase of advertising space and the ability to set processing statuses on behalf of the ADVERTISER. These may vary from one ADVERTISER client to another (which increases the number of Client IDs and Client Secrets the Media Agency must manage), or they may be specific to the Media Agency if the PA-R hosts multiple ADVERTISER clients and offers rights delegation features. Additional features may also enable the exchange of fund calls or Disbursement Reports (CRD) via a lifecycle status message.
 - ✓ via the exchange of status and invoice files (CDAR) through the PEPPOL network, with these files containing the invoice when it is to be transmitted to the Media Agency. In this case, the PA-R must know a PEPPOL email address (EndPoint) for the Media Agency, which should be an address dedicated to these exchanges, preferably a single address for all of the Media Agency's ADVERTISER clients, with the Agency then responsible for processing them in the correct context. When this mode is enabled, the PA-R transmits the invoice and the lifecycle history details via CDAR status messages upon receipt of the invoice, then manages the exchange of processing status updates with the Media Agency that the latter has created on behalf of the Advertiser. Additional features may also enable the exchange of fund calls or Disbursement Reports (CRD) via a lifecycle status message.
- The PA-R and the ADVERTISER must ensure that the ADVERTISER does not set the processing statuses for which it has entrusted responsibility to the Media Agency.

NOTE: If the connection between the PA-R and the Media Agency is established directly from the PA-R, the PA-R must ensure that the API client or PEPPOL Access Point used by the Media Agency is hosted within the European Union.

Figure60 : OPTION 2: The PA PIVOT is the ADVERTISER's PA-R.

In the diagram above, blocks 5a through 5e are present only if the Media AGENCY is also a PAYING Tier. Otherwise, the ADVERTISER has processing (and therefore approval) status via block 4b to proceed with direct payment.

Step	Step Name	Responsible party	Description
1	Creation of the invoice or credit note issued in the ADVERTISER's name and sent to SIRENAnnonceur_ACHATPUB	ADVERTISING AGENCY (SELLER)	The ADVERTISING AGENCY creates the invoice or credit memo via its information system. It may delegate this task to an OD/SC (Compatible Solution) or to its PA-E. It forwards it to its PA-E for processing. These invoices identify the Media Agency as EXT-FR-FE-BG-01, or even EXT-FR-FE-BG-02 if the MEDIA AGENCY wishes to specify that the Media Agency is also a third-party payer (though this is primarily a matter between the Media Agency and the ADVERTISER).
2	Transmission of data stream 1, the invoice or credit memo, and related statuses	PA-E	The PA-E, having performed the regulatory compliance checks, including checks for duplicates and the existence of an active electronic billing address for the recipient, MUST transmit the data required by the Administration (Flow 1) to the CdD PPF. It MUST also transmit the invoice (Data Set 2 or Data Set 3) to the PIVOT PA responsible for the SIRENAnnonceur_ACHATPUB address, which in this case is the PA-TR proposed by the Media Agency. It must transmit the "Submitted" status to the PPF Data Center).

Step	Step Name	Responsible party	Description
3a	Receipt of the invoice or credit note	PA-R	The PIVOT PA-R platform receives the invoice or credit note (flow 2 or flow 3), performs regulatory checks, creates the transmission statuses (here “Received,” then “Made Available”), and makes the invoice available to the ADVERTISER for processing, which allows the Media AGENCY to access it.
3b	Viewing / Receipt of the invoice or credit note by the Media Agency	Media Agency / PA-R	The Media Agency can access the invoice or credit note in two ways: • Either by using the standard API with the Client ID / Client Secret provided to it by the PA-R. • Or because the PA-R sends it via status messages attaching the invoice or credit note via PEPPOL.
4a	Processing the invoice or credit memo and updating statuses prior to payment	Media Agency (on behalf of the ADVERTISER)	The Media AGENCY processes the invoice or credit note on behalf of the ADVERTISER and transmits to the PA-R the processing statuses for which it is responsible (statuses “Rejected,” “Accepted,” “Disputed,” “Approved,” “Partially Approved,” “Suspended,” etc.), so that the PA-R can forward them to the ADVERTISING AGENCY via its PA-E. If the Media AGENCY performs its processing on its own Compatible Solution, it can transmit the lifecycle statuses to the PA-R using the standard API, with its own login credentials (Client ID / Client Secret) by enabling its delegation rights (if the PA-R offers these features), or with login credentials specific to each ADVERTISER.
4b	Receipt of invoice statuses	ADVERTISER	The ADVERTISER receives or accesses the invoice statuses following the Media AGENCY’s processing of the invoice in accordance with the lifecycle terms and forwards them to its PA-R for transmission to the ADVERTISING AGENCY via its PA-E.
4c	Transmission of the status by the ADVERTISER’s PA-R	PA-R	The ADVERTISER’s PA-R transmits the lifecycle statuses to the MEDIA AGENCY via its PA-E.
4d	Receipt of invoice statuses	AGENCY (SELLER)	The RÉGIE receives the invoice details after the Media AGENCY has processed the invoice in accordance with the life cycle procedures.
5a	Request for Funds or Statement of Disbursements for payment by the Media Agency (as a third-party payer)	Media Agency	In the case of a payment mandate, the Media Agency creates a call for funds (or sends a Statement of Disbursements: CRD) to the Advertiser. These fund calls may be issued via the PA-R through a lifecycle status message or by any other means, depending on the services offered by the Media Agency and the PA-R and the receipt terms agreed upon with the Advertiser.
5b	Receipt of the Fund Request or CRD by the ADVERTISER	ADVERTISER	Receipt of fund calls (or CRDs) from its Media Agency, in accordance with the agreed terms.
5c	Transfer of funds to the Media Agency	ADVERTISER	Transfer of funds to the Media Agency
5d	Receipt of funds by the Media Agency for payment of invoices	Media Agency	Receipt of funds for invoice settlement. Confirmation of payment and final verification of the invoice or credit memo in step 4a are two prerequisites for settling the invoice or credit memo with the RÉGIE.

Step	Step Name	Responsible party	Description
5e	Payment of the invoice/credit memo Creation and transmission of the "Payment transmitted" status	Media AGENCY (Third-Party PAYER) / PA-R	The Media Agency (Third-Party Payer) pays the invoice to the Media House on behalf of the Advertiser. It may prepare a "Payment Forwarded" status for the Media House, which it submits to the PA-R (recommended): - Either by using the standard API with the Client ID and Client Secret provided by the PA-R. - Or via PEPPOL using an email address for receiving lifecycle status updates generated by a Third Party.
5f	Access to invoices and lifecycle statuses corresponding to the invoice / credit memo	ADVERTISER / PA-R	The ADVERTISER receives or accesses the invoice statuses following the invoice's processing by the Media AGENCY in accordance with the terms of the lifecycle. Its PA-R forwards them to the ADVERTISING AGENCY via its PA-E.
5g	Receipt of the "Payment" status transmitted by the ADVERTISING AGENCY	ADVERTISING AGENCY (SELLER)	The ADVERTISING AGENCY receives the "Payment Sent" status from its PA-E
6a	Receipt of invoice/credit note	RÉGIE (SELLER)	The AGENCY collects the invoice / credit memo (off-system).
6b	Issuance of the "Paid" status	AGENCY / PA-E	If the invoice's VAT is due upon receipt, the AGENCY creates the "Received" status and transmits it to the PPF Contract Manager via its PA-E. The PA-E also transmits the "Received" status to the PA-R for the ADVERTISER's attention.
6c	Receipt of the "Paid" status	Media AGENCY and ADVERTISER PA-TR	The ADVERTISER receives the "Received" status on the PA-TR, to which the Media AGENCY has access via delegated rights.
6d	Access to the "Paid" status for AGENCE Média	AGENCE Média PA-R	The Media Agency has access to the lifecycle status of the invoice or credit note (here "Paid") in two possible ways: - Either by using the standard API with the Client ID and Client Secret provided by the PA-R. - Or via PEPPOL at the initiative of the PA-R, which sends it to the email address configured in the ADVERTISER's environment for exchanges with its third-party Media Agency.
7	Receipt of the "Encaissée" status by the PPF CdD	PPF Data Hub	The PPF Data Concentrator (CdD PPF) receives the "Received" status.

Parties	Actor Responsibilities	Optional functionalities of the actors
<u>AGENCY (SELLER)</u>	➤ If applicable, use the EXTENDED-CTC-FR profile and specify the third party responsible for the order and invoice management in the "BUYER'S AGENT" (EXT-FR-FE-BG-01) block of the Invoice.	➤ Submit the PFP as an attachment to the invoice for processing by the Media Agency.
<u>PA-E of the ADVERTISING AGENCY</u>	➤ Know how to handle the minimum standard formats and profiles (invoice and CDAR).	

Parties	Actor Responsibilities	Optional functionalities of the actors
<u>ADVERTISER</u>	➤ Know how to handle the minimum standard formats and profiles (invoice and CDAR). ➤ Configure access rights on the PA-R to allow the Media Agency to access invoices received at the dedicated email address opened by the Advertiser for its advertising space purchases (e.g., SIRENannonceur_ACHATPUB) ➤ Ensure that you do not interfere with the management of the processing statuses of advertising space purchase invoices received at this address, the responsibility for which has been entrusted to the Media Agency by mandate. ➤ Take into account the processing statuses of these advertising space purchase invoices provided by the Media Agency to forward them to the Advertising Network, and, if applicable, to the PPF for the "Rejected" status, via its PA-R.	
<u>ADVERTISER's PA-R (PA PIVOT)</u>	➤ Be able to process the minimum required formats and profiles (invoice and CDAR).	➤ Know how to implement either the standard API or the PEPPOL exchange of the ADVERTISER's invoices and lifecycle messages received on the PA-TR with the Media Agency (its PA-TR or its Compatible Solution). ➤ Be able to restrict the ADVERTISER's rights regarding the processing of invoices for the purchase of advertising space that the ADVERTISER has entrusted to the Media Agency. ➤ Interoperate with the Media Agency's PA-TR or Compatible Solution to manage fund calls or Disbursement Reports and their use.
<u>Media Agency</u>	➤ Work with the ADVERTISER to configure permissions on the PA-R to allow the Media Agency to access invoices received at the dedicated address opened by the ADVERTISER for its advertising space purchases (e.g., SIRENannonceur_ACHATPUB), and then to provide the ADVERTISER with the processing lifecycle statuses resulting from its management mandate. ➤ Process invoices/credit notes for advertising space purchases on behalf of the ADVERTISER, and in particular set the necessary processing statuses.	➤ If the Media Agency acts as a third-party payer, organize the exchanges for fund calls, then pay the invoices/credit notes on behalf of the ADVERTISER, and transmit the corresponding lifecycle statuses to its SC/PA-TR.
<u>OD/SC (Compatible Solution) / PA-TR of the Media Agency</u>	➤ Be able to process the minimum required formats and profiles (invoice and CDAR).	➤ Be able to implement either the standard API or PEPPOL reception of the ADVERTISER's invoices and lifecycle messages received on the PA-R. ➤ Interoperate with the ADVERTISER's PA-R to manage fund calls or Disbursement Reports and exchange lifecycle statuses, whether to be sent to the MEDIA AGENCY or received by the PA-R from the PA-E.

3.3.1.9 Recommendations

The first recommendation is to designate a dedicated email address for receiving advertising space purchase invoices, the management of which is entrusted to a Media AGENCY.

Next, choosing Option 1 offers numerous advantages over Option 2:

- It allows for reliance on PIVOT PAs specialized in managing this type of purchase, selected by each Media Agency, enabling integrated management of these invoices, and likely better equipped to handle the fund-raising phase and their utilization.
- It allows the ADVERTISER to easily access their invoices and lifecycle, including through their own PA-R / SC if it can interoperate with the PA-TR. The simplest way is to use the standard API with login credentials specific to the ADVERTISER (who will need to manage a small number of these corresponding to the various use cases for which they have entrusted a significant portion of management to a third party). However, status exchanges via PEPPOL are also a possibility.
- It allows the Media Agency to be in direct contact with the Media House, whereas OPTION 2 requires it to act as the back office for the ADVERTISER and its PA-R.

The main advantage of choosing Option 2 is that the ADVERTISER does not need to use a PA-TR other than its PA-R, but this implies:

- that its PA-R must be capable of interacting with the Media Agency, either via API or via PEPPOL exchange,
- that its PA-R is capable of managing permissions so that the ADVERTISER cannot set processing statuses on invoices for which it has entrusted responsibility to the Media Agency,
- that the Media Agency connects to a very large number of PA systems (potentially all those chosen by Advertisers as a whole, with potentially separate login credentials per Advertiser if an API is used, which is in itself a security concern). This makes it preferable to use PEPPOL exchanges, which rely solely on email addresses that must be defined and configured on the ADVERTISER's PA-R or SC, as well as on those of the Media Agency.
- That the features for requesting funds and their consumption are very limited on the PA-R, due to its general-purpose design, with some exceptions.

3.3.2 Energy Sector

3.3.2.1 Context

Energy invoices contain specific data describing applied rates, meter readings, reading period indices, power levels, etc.

These bills also contain additional information, such as the source of energy production, as well as information required in the event of an outage, some of which is mandated by specific regulatory provisions.

The EN16931 standard and its extension applicable in France (EXTENDED-CTC-FR profile) offer numerous options for providing various billing information.

However, it is up to the supplier to determine how it will incorporate this data into its bills, which means that its customers must be informed of these decisions. To facilitate a common approach among energy suppliers that allows the vast number of customers to receive billing information in a format that is as uniform as possible, the Union Française de l'Électricité, which brings together a large number of electricity suppliers, has led harmonization efforts for the sector. While these efforts are optional, their purpose is to align practices as part of the reform's implementation.

To establish this as a benchmark for best practices, the results of this work are included in this chapter.

3.3.2.2 What specific data, implementation proposals in the core formats

Energy bills have the following characteristics:

- They refer to one or more sites, corresponding to one or more energy delivery addresses. The site location information is therefore present at the invoice line level (EXT-FR-FE-BG-10, EXT-FR-FE-150), and can also be copied at the document level in the case of single-site invoices (particularly for the physical address) in BG-15.
- They require descriptive data on the supply, tariff, power, meter, consumption index readings, etc., which need to be distinguished rather than grouped together in a description of the billed item (BT-154).

The proposed sector-specific harmonization aims

- On the one hand, to use the BT-128 data element (Billed Item), which includes a qualifier selected from a list of codes (UNTDID 1153) to distinguish between different types of references. This data element is included in the EN16931 standard, but only the EXTENDED-CTC-FR profile allows for its multiple use (cardinality 0..n).
- On the other hand, to use item attributes (BG-32), which consist of a name (BT-160) and a value (BT-161), with the solution here being to standardize the names to create sector-specific pseudo-codes. The EXTENDED-CTC-FR profile has also added a code that qualifies the data in a more standardized way, as well as a unit of measurement when providing values with units, which are not currently used for these energy bills.

Item descriptions are first based on data from the EN16931 standard:

- BT-153: item name
- BT-154: item description
- BT-155: item code generated by the SELLER, if available (e.g., EAN code specific to each supplier).

Next, the coding of additional information is as follows:

- Use of the BT-128 data field, "Invoiced Item," with qualifiers (BT-128-1) indicating the following "Invoiced Item" reference types:

Billing information to be included in BT-128	Qualifier code in BT-128-1
Electricity (RAE) or Gas (RAG) Delivery Reference	AVE
Site code (site identification key at the customer's end)	ACD (If a second value is present: IL)
Usage version (CU, MU, LU)	AXQ
Routing segment and rate (CA, CE, ... / TA, T2, ...)	AWA
Energy type (Electricity, Gas)	VP
Contract ID	VC
Technical code of the offer	AAG
Name of the sub-scope in the bid	BT

- Use of item attributes (BG-32), with the following codes used in Attribute Name (BT-160), the values being given in BT-161:

Proposed harmonization of attribute codes used in Attribute Name in BT-160	Data format in BT-161
COEFFICIENT_PTA	text
CONSUMPTION	text
METER_READING_START_DATE	DD/MM/YYYY or YYYY-MM-DD
END_DATE_METER_READING	DD/MM/YYYY or YYYY-MM-DD

Proposed harmonization of attribute codes used in Attribute Name in BT-160	Data format in BT-161
START_INDEX	text
END_INDEX	text
COUNTER_NUMBER	text
PCS	text
POWER REACHED	text
SUBSCRIBED CAPACITY	text
DAILY_QUANTITY	text
METER_TYPE	text
CONSUMPTION_UNIT	text
GROSS_VOLUME	text

For parafiscal charges, the harmonization proposal aims to use dedicated billing lines (BG-25), utilizing specific EAN codes , as described in Standard XP Z12-012, Chapter 4.4.8.

Example of a billing line:

BG-25	LIGNE DE FACTURE	Valeur	Ligne portant la consommation
BT-126	Identifiant de ligne de facture	1	
BT-128	Identifiant d'objet de ligne de facture	5121492223746	Référence Acheminement Electricité ou Gaz
BT-128-1	Identifiant du schéma	AVE	
BT-128	Identifiant d'objet de ligne de facture	C5	Segment ou Tarif d'acheminement
BT-128-1	Identifiant du schéma	AWA	
BT-129	Quantité facturée	300	
BT-130	Unité de mesure	KWH	
BT-131	Montant net de ligne de facture	30,21	Montant HT de ligne
BG-26	PERIODE DE FACTURATION D'UNE LIGNE		Période totale de consommation
BT-134	Date de Début	20251001	01/10/2025
BT-135	Date de Fin	20251031	31/10/2025
BG-29	DÉTAIL DU PRIX		
BT-146	Prix net de l'article	0,1007	Prix unitaire
BG-31	INFORMATION SUR L'ARTICLE		
BT-153	Nom de l'article	Electricité	
BT-154	Description de l'article	Heures Creuses Hiver	Poste horo-saisonnier
BG-32	ATTRIBUTS D'ARTICLE		
BT-160	Nom d'attribut d'article	NUMERO_COMPTEUR	
BT-161	Valeur d'attribut d'article	122345678	
BG-32	ATTRIBUTS D'ARTICLE		
BT-160	Nom d'attribut d'article	DATE_DEBUT_RELEVÉ	
BT-161	Valeur d'attribut d'article	01/10/2025	
BG-32	ATTRIBUTS D'ARTICLE		
BT-160	Nom d'attribut d'article	INDEX_DEBUT	
BT-161	Valeur d'attribut d'article	1000	
BG-32	ATTRIBUTS D'ARTICLE		
BT-160	Nom d'attribut d'article	DATE_FIN_RELEVÉ	
BT-161	Valeur d'attribut d'article	31/10/2025	
BG-32	ATTRIBUTS D'ARTICLE		
BT-160	Nom d'attribut d'article	INDEX_FIN	
BT-161	Valeur d'attribut d'article	1300	

If it is necessary to distinguish between multiple billing periods for a given billing line (for example, in the event of a meter change), two options are available:

- Add lines with Unit Prices and Quantities equal to 0 (to have a line amount of 0) and the necessary business data details for the meter reading and date, for example:

ID	Structure du format	Valeur	Objet
BG-25	LIGNE DE FACTURE		Ligne portant la consommation
BT-126	Identifiant de ligne de facture	1	
BT-128	Identifiant d'objet de ligne de facture	51214922223746	Référence Acheminement Electricité ou Gaz
BT-128-1	Identifiant du schéma	AVE	
BT-128	Identifiant d'objet de ligne de facture	C5	Segment ou Tarif d'acheminement
BT-128-1	Identifiant du schéma	AWA	
BT-129	Quantité facturée	300	Conso 100 (1er compteur) + 200 (2ème compteur)
BT-130	Unité de mesure	KWH	
BT-131	Montant net de ligne de facture	30,21	Montant HT de ligne
BG-26	PERIODE DE FACTURATION D'UNE LIGNE		Période totale de consommation
BT-134	Date de Début	2025-01-01	01/10/2025
BT-135	Date de Fin	2025-01-31	31/10/2025
BG-29	DÉTAIL DU PRIX		
BT-146	Prix net de l'article	0,1007	Prix unitaire
BG-31	INFORMATION SUR L'ARTICLE		
BT-153	Nom de l'article	Electricité	
BT-154	Description de l'article	Heures Creuses Hiver	Poste horo-saisonnier

BG-25	LIGNE DE FACTURE		Ligne portant la consommation
BT-126	Identifiant de ligne de facture	2	
BT-128	Identifiant d'objet de ligne de facture	51214922223746	Référence Acheminement Electricité ou Gaz
BT-128-1	Identifiant du schéma	AVE	
BT-128	Identifiant d'objet de ligne de facture	C5	Segment ou Tarif d'acheminement
BT-128-1	Identifiant du schéma	AWA	
BT-129	Quantité facturée	0	Quantité
BT-130	Unité de mesure	KWH

- Alternatively, for the EXTENDED-CTC-FR profile, use the sub-line mechanism, which allows you to define a "INFORMATION" line subtype. This subtype allows to omit the quantity, unit price, and line total, and also allows to link these lines to the main line (EXT-FR-FE-162: Parent Line ID), for example:

ID	Structure du format	Valeur	Objet
BG-25	LIGNE DE FACTURE		Ligne portant la consommation

3.3.2.3 Use of a READABLE

Energy bills generally include additional general information, in the form of tables or graphs, that does not fit within the EN16931 data model.

As indicated in Standard XP Z12-012, it is therefore permitted to attach a readable version of the bill, which may contain additional information not present in the structured bill data file:

- Either by using the Factur-X format, which is designed for this purpose, with the human-readable version in PDF and the structured data in the factur-x.xml file in CII format, EXTENDED profile.
- Or by attaching a human-readable version (PDF format) as a BG-24 (attached document) within the invoice file (UBL / CII) containing:
 - ✓ A document reference, for example the invoice number in BT-122,
 - ✓ A code describing the document type (BT-123) set to "LISIBLE," which means it is a readable version of the invoice that must contain ALL the information present in the structured CII/UBL file.
 - ✓ A MIME type code indicating the document type in BT-125-1, for example "application/pdf" if it is a PDF version
 - ✓ The readable file encoded in Base64 in BT-125-2.

Obligations of Approved Platforms:

- **Be able to process the formats and profiles of the minimum framework (invoice and CDAR).**
- **Be able to extract base64-encoded attachments.**

3.3.3 Real Estate Sector

3.3.3.1 Context

The real estate sector involves several types of stakeholders:

- Property owners, who may be individuals or legal entities (such as real estate investment companies, or SCI). In the case of a property divided into units among several owners, each with a share of the common areas, these owners are co-owners who are members of a co-owners' association.
- Condominium Associations (SDC) are legal entities under private law that have their own legal status and purchase services or goods (particularly construction work) to which the co-owners contribute through their co-ownership fees.
- Property managers, acting as agents for the co-owners' associations, are responsible for managing the co-owned buildings.
- Real estate investment companies (SCIs), whether or not they are subject to VAT and whether or not they are actually liable (or exempt) for VAT.
- Landlords (individuals or corporations) who rent out real estate to entities that are or are not subject to VAT.
- Real estate agents who bill their clients (corporations or individuals, whether subject to VAT or not)
- Commercial agents who bill real estate agencies for their fees.
- Real estate developers and property dealers
- Suppliers who sell services (e.g., construction work) or goods to condominium owners' associations (SDC).

One of the issues to be clarified is who is affected by the reform and for what types of services.

Next, we will focus on each type of transaction

3.3.3.2 Who is affected by the reform

As a reminder, the entities affected by the reform are those subject to VAT, regardless of whether they carry out transactions subject to VAT or those that are exempt from it.

They are all required to accept electronic invoices and therefore to select an Approved Platform for one or more email addresses to receive invoices, as well as to file an e-report for international B2B purchases excluding imports of goods.

When they issue invoices, they may be outside the scope of VAT or outside the scope of the reform (Articles 261 to 261^E of the General Tax Code), which exempts them from the obligations to issue invoices or submit sales e-reports.

When they are subject to VAT, they are generally listed in the PPF Directory. **It may happen that some VAT-registered entities are not yet listed in the PPF Directory** (<https://facturation.chorus-pro.gouv.fr/annuaire/authentification/connexion>). Since this prevents them from receiving electronic invoices or transmitting e-reporting data to the PPF via an Approved Platform, they cannot fulfill their obligations and will not be subject to penalties, nor will their counterparties, who consider them non-taxable entities under the reform (no obligation for electronic invoicing or B2C e-reporting).

LMNP and LMP landlords are, in principle, VAT-registered, even if the rental is VAT-exempt. They are therefore subject to the requirement to receive B2B electronic invoices and to report international B2B purchases via e-reporting.

If they carry out a VAT-exempt activity, they are not subject to the electronic invoicing requirement when invoicing VAT-registered entities established in France (for example, for commercial leases), nor to B2C sales e-reporting, international B2B sales e-reporting, or payment e-reporting.

Condominium Associations (SDCs) have their own legal status. To be affected by the reform, they must already have a SIREN number, which may be the case, for example, if they employ staff. Next, the determining factor is whether the SDC is subject to VAT, which means it must be listed in the PPF directory.

The situation is therefore as follows, depending on the case:

- If they do not have a SIREN number, which is generally the case: they are not affected by the reform. They cannot be listed in the PPF directory in any case.
- If they have a SIREN number (for example, due to hiring employees, performing certain types of work, etc.):
 - ✓ If they are not subject to VAT: they are exempt from the reform and have no obligation to use electronic invoicing or e-reporting. If a non-taxable SDC (with no economic activity, no rental of common areas) is listed in the PPF directory, then the property manager must contact the business tax office to have that SDC removed from the directory.
 - ✓ If they are subject to VAT but are not listed in the directory, they should contact their tax office to find out why they are not listed in the PPF directory and resolve the issue. In the meantime, they are exempt from the obligation to issue or receive electronic invoices and to submit their e-reporting. However, they must regularly check the PPF directory to confirm that the issue has been resolved and then fully comply with the reform.
 - ✓ If they are subject to VAT and listed in the PPF directory (for example, due to collecting rent on common areas): they are affected by the reform. They must have an email address for receiving electronic invoices, provided by an Approved Platform (PA-R). If they invoice VAT-registered entities in France, they must issue electronic invoices under the electronic invoicing reform and use an Approved Platform (PA-E) to do so (which may or may not be the same as their Approved Platform for receiving electronic invoices).
 - If they have a mixed business (part subject to VAT and part not subject to VAT), the subject-to-VAT portion takes precedence. They are therefore required to receive electronic invoices (by selecting an electronic receipt address and an Approved Platform), which will receive the electronic invoices issued by sellers (suppliers and service providers)..

The obligation also applies to the issuance of invoices, except for invoices relating to transactions exempt from VAT under Articles 261 through 261^E of the CGI or those excluded from the scope of the reform. However, if the recipient has an email address for receiving invoices that is accessible via the SDC's PA-E (or even the Property Manager's if they have a mandate to issue on behalf of the SDC), they may send an electronic invoice (which will not result in Flow 1 data being transmitted to the PPF Data Hub). They may also transmit their invoice by any other means, such as email, or via Peppol if both they and the invoice recipient are equipped to do so.

Finally, regarding e-reporting, it is required for taxable activities, both for sales (B2C, B2Bint) and purchases (Bint2B), as well as for payment e-reporting when VAT is due upon receipt of payment.

- In particular, service residences are, in principle, subject to VAT and are therefore subject to the reform.

NOTE: Can a non-VAT-registered SDC refuse an electronic invoice in the minimum standard format and demand a PDF or paper invoice? Yes, but it may also accept it, particularly when it is a Factur-x in the form of a PDF invoice.

NOTE: Free Union Associations (ASL) and Free Urban Land Associations (AFUL) have no specific distinctions regarding the reform and management of invoices compared to Co-ownership Associations. Therefore, all provisions apply equally to these entities.

Professional property management companies established in France are management firms that are, with few exceptions, subject to VAT. However, they act as transparent intermediaries for the purchase of services or goods within the scope of their management mandate for the co-owners' associations under their care. **Consequently, if the homeowners' association is not VAT-registered, the suppliers of these goods and services are deemed to be conducting these transactions for the benefit of the non-VAT-registered homeowners' association, even if the professional property management firm that is responsible for processing purchase invoices—and to which they usually send these invoices—is itself subject to VAT for its own business activities.** In this case, these transactions therefore fall under B2C sales e-reporting for the suppliers. The invoices are issued in the name of the Co-owners' Association (and not in the name of the professional property manager in charge of managing the Co-owners' Association). They do not include the professional property manager's SIREN number.

Condominium Associations (SDCs) may be composed of co-owners who are not subject to VAT and co-owners who are subject to VAT (for example, a building in which some co-owners are individuals occupying their own homes and others are businesses). This has no impact on whether the SDC is subject to VAT or not, as its role is to manage the common areas, including common expenses (such as water and heating, for example).

The professional property manager then prepares, on behalf of the SDC, an accounting document detailing the condominium expenses, broken down among the co-owners, indicating the included VAT and allowing each co-owner to handle the VAT according to their own situation (BOI-TVA-BASE-10-10-30).

3.3.3.3 What are the impacts of the reform on day-to-day management operations handled by professional property managers on behalf of SDCs?

If the Condominium Association is not a taxable entity, it has no obligation to receive electronic invoices. The professional property manager can therefore continue on behalf of the co-owners' association, invoices in any format (PDF, paper, email, etc.). However, it is important to clearly establish that service providers or suppliers invoice the associations and not the professional property managers (who are generally taxable entities).

If the SDC is subject to VAT, it must have an email address for receiving invoices in the format 0225:SIRENSDC or 0225:SIRENSDC_XXX (where SIREN SDC is the SDC's SIREN number) and provide it to an Approved Platform. It may authorize its property manager to create this address, select the Approved Platform for receiving electronic invoice (PA-R), and thereby enable the professional property manager to access the SDC's invoices and continue managing them on its behalf.

The issue is that of use case #15 and, in practice, is entirely identical to that of advertising space purchases detailed in section 3.3.1, where the Property Manager acts as a BUYER'S AGENT serving as a transparent intermediary on behalf of the SDC, which is the BUYER.

The best practice is therefore for the professional property manager to choose an invoice-receiving PA-R that best suits its needs, i.e., one that allows it to manage, through delegated rights, all SDC accounts under its management. This also allows the SDC to have direct access to the PA-R to track received invoices and their processing. It can also access it using the standard APIs defined in the XP-Z12-013 standard if the selected Approved Platform has implemented them and if the SDC has a solution using them to access it.

If the SDC wishes to choose its own Approved Platform for receiving these invoices, it must then:

- either arrange for the professional Property Manager to access the invoices directly on the selected PA-PIVOT, which may complicate the professional Property Manager's operations, as they may not wish to interface with a large number of Approved Platforms to which they would first need to register;
- Or independently forward the received invoices to the professional Property Manager for processing, then retrieve the status updates to reflect them in its Approved Platform for sending to Vendors, or even to the PPF (in the case of a "Rejected" status).

- In any case, the use of a dedicated email address for receiving invoices (SIRENSDC_XXX) is **STRONGLY RECOMMENDED** to clearly distinguish invoices managed by the property manager from any other invoices that the professional SDC might choose to process itself.

If a service provider/supplier invoices multiple SDCs managed by the same professional property manager, they must issue one invoice per SDC.

Fund calls (service charge calls, contributions to the repair fund, repair calls, service charge adjustments, etc.) issued by the SDC applying the aforementioned VAT doctrinal tolerance to the co-owners are not invoices and are therefore not affected by the reform. They may, however, appear on an invoice. In this case, it is a capital call line, outside the scope of VAT (like a disbursement line), so its line-level VAT type code (BT-151) is "O" and the VATEX code is VATEX-EU-O (in the line: EXT-FR-FE-179, in the VAT footer: Bt-121). You must then use the EXTENDED-CTC-FR profile, which allows you to mix non-VAT-subject lines with other lines.

Invoices from the professional property manager (fees) for their property management services are sent to the SDC and therefore follow the same rules as any service invoice for the SDC. Thus, if the SDC is a taxable entity (and the property manager is as well), this is a B2B electronic invoice. If the SDC is not a taxable entity (or is not in the PPF directory), this is an invoice that is not subject to the electronic invoicing requirement, but which must be reported via B2C e-reporting by the property manager (Flux 10.3 for cumulative daily revenue by transaction category and applicable VAT rate, and 10.4 for collections if VAT is due upon collection).

Accounting Report: The property manager must provide accounting and tax information to each co-owner, enabling them to record their share of charges, and applicable VAT for their own accounting purposes, particularly when they are themselves subject to VAT. It should be noted that in this case, the co-owner will include these items in their VAT return, even though they could not be pre-filled on their behalf.

3.3.3.4 **What are the impacts of the reform on day-to-day management operations handled by a property manager on behalf of an owner?**

If a property owner entrusts the management of their property to a rental manager, the process is the same as for the relationship between the property manager and the SDC detailed above:

- If the property owner is not subject to VAT, they are not covered by the reform, If the property owner is subject to VAT, they are affected by the reform and must choose an email address for receiving domestic B2B invoices, as well as an Approved Platform to handle this. Similarly, best practice is:
 - ✓ To define a dedicated email address for receiving invoices (to avoid mixing them with other purchase invoices), such as SIRENowner_PROPERTYMANAGEMENT-XXX (where XXX can be used to diversify addresses by manager or by property, keeping in mind that having too many addresses often leads to complexity in managing and maintaining the system, so this should be kept to a minimum).
 - ✓ That they entrust their property manager with the task of selecting and contracting with the most appropriate Approved Platform. If this Approved Platform offers the standard API (XP Z12-013), the owner can access their invoices and lifecycle statuses by using it from their own management system for accounting purposes.
 - ✓ Otherwise, the owner should arrange for the exchange of invoices and status reports received directly with their property manager, as well as the return status reports that the property manager will prepare for transmission via the Approved Platform chosen by the property owner.

3.3.3.5 **What are the impacts of the reform for a Landlord**

The first question is whether the Landlord is subject to VAT.

Next, it must be determined whether the lease falls within the scope of the reform or whether it is governed by Articles 261 through 261^E of the CGI (and, for example, Article 261D). If so, there is no obligation for electronic invoicing or e-reporting.

If the Lessor does not fall under or no longer falls under Articles 261 through 261^E (for example, because the Lessor has opted for VAT when given the choice), then they fall within the scope of the reform:

- If the tenant is a taxable person, the rental invoice must therefore be electronic and exchanged via Approved Platforms. If VAT is due upon receipt of payment, a payment receipt must also be transmitted.

- If the tenant is not subject to VAT, there is no specific requirement for an electronic rental invoice (the format is unrestricted), but the VAT-registered landlord must include the rental income in their B2C sales e-reporting (transaction e-reporting), and if VAT is due upon receipt of payment, submit a corresponding payment e-report (flow 10.4).

If the Lessor is not subject to VAT, they have no obligation to issue electronic invoices or submit e-reports. However, they may choose to issue electronic invoices, either by using the infrastructure of Approved Platforms if their client is registered there, or by any other means (via Peppol, by email, for example).

For an electronic invoice to be valid, both the landlord AND the tenant must be subject to VAT and established in France. In this case, the landlord must also submit an electronic payment report through their Approved Platform. If either party to the lease is not subject to VAT, there is no obligation to issue an electronic invoice.

Case of furnished rentals without hotel-style services:

A furnished rental for residential use to a tenant who is not subject to VAT does not require the issuance of an electronic invoice to the tenant (Article 261 et seq.).

However, the landlord is still subject to VAT and must therefore register with an Approved Platform by September 1, 2026, to receive, for example, electronic invoices for repairs, management fees, etc.

Case of furnished rentals with hotel-like services:

Furnished residential rentals that include the provision of hotel-like services (at least three of the following: breakfast, housekeeping, linens, and guest reception) are affected by the reform because they are subject to VAT.

If the customer is a VAT-registered entity, the landlord must send them an electronic invoice as part of the reform.

If the customer is not a VAT-registered entity, then the landlord must submit an e-reporting of the transaction (B2C sales) and an e-reporting of payment for invoices on which VAT is due upon receipt of payment, to be transmitted via a Accredited Platform.

SCIs:

The requirement varies depending on whether they are subject to VAT. Some SCIs are subject to VAT, while others are not. It is therefore necessary to analyze the situation of each SCI on a case-by-case basis.

- If the SCI is not subject to VAT: it is not affected by the reform. It is not required to choose an Approved Platform to receive electronic invoices, nor to issue electronic invoices, nor to submit e-reporting for transactions or payments.
- If the SCI is subject to VAT (even if not registered): it is, in principle, subject to the reform. If it is listed in the PPF directory, it must therefore set up an Approved Platform and an email address for receiving invoices.

Case of commercial leases:

Since the tenant is a VAT-registered entity and the landlord SCI is also a VAT-registered entity, the SCI must set up an Approved Platform and issue electronic rent invoices.

Case of jointly owned properties comprising at least one VAT-registered entity:

If the jointly owned property does not have a SIREN number, it is not listed in the PPF directory and is not affected by the reform.

3.3.3.6 What impact will the reform have on real estate developers, real estate agencies, appraisers, and other intermediaries, such as notaries?

The rule remains the same:

- Is the seller subject to VAT (and listed in the PPF directory)?
- Is the buyer subject to VAT (and listed in the PPF directory)?
- Does the transaction fall within the scope of the reform (not outside the scope of VAT and not in cases covered by Articles 261 to 261^E)

The answers help determine each party's obligations:

- Any VAT-registered entity listed in the directory must have an email address for receiving invoices and an Approved Invoice Receipt Platform. It is also subject to B2B e-reporting for purchases, excluding imports of goods.
- Any exchange of invoices between a seller and a buyer, both of whom are subject to VAT and listed in the PPF directory, that is not outside the scope of VAT (such as disbursement invoices or calls for funds) and that does not fall under Articles 261 to 261^E, MUST be electronic under the reform. If VAT is due upon receipt of payment, a payment receipt status MUST also be transmitted.
- Any sale made by a VAT-registered entity listed in the PPF directory to a non-VAT-registered party (individual, association, SDC, etc.), which is not outside the scope of VAT and does not fall under Articles 261 to 261^E, MUST be subject to B2C e-reporting (flow 10.3) and payment e-reporting (10.4) when VAT is due upon receipt of payment.
- Any sale made by a VAT-registered entity listed in the PPF directory to an international B2B VAT-registered entity that is not outside the scope of VAT and does not fall under Articles 261 to 261^E, MUST be subject to B2Bint e-reporting (flow 10.1).

For example:

- The sale of real estate to a private individual by a business: no electronic invoicing requirement; B2C e-reporting requirement for the Seller.
- Sale of real estate by a business to another business: electronic invoicing required regardless of whether VAT is mentioned in the notarized deed.
- Notarized deed: sale of real estate between taxable parties: The recommendation is to prioritize issuing an electronic invoice to which the legal deed is attached as an appendix, in order to preserve the integrity and complexity of the deed while remaining within the framework of the electronic invoicing workflow and enabling the pre-filling of VAT returns.
- A developer who purchases construction services for its own behalf with service providers subject to VAT in France: electronic invoicing required.
- A real estate agency that invoices its sales commission for a sale to a private individual, with the latter paying the commission: no obligation to issue an electronic invoice, but a B2C e-reporting obligation for the real estate agency.
- A sales agent operating as a sole proprietor or self-employed individual (and therefore subject to VAT) who invoices a commission to a real estate agency (subcontracting): electronic invoicing requirement.
- A sales agent operating as a sole proprietor or self-employed individual who bills the private buyer directly: no requirement for electronic invoicing, but a requirement for B2C e-reporting.
- Notary fees in the case of a sale to a business: electronic invoicing is required, with cash-on-delivery status if VAT is due upon receipt of payment.
- Notary fees in the case of a sale to a private individual: no obligation to issue an electronic invoice, but B2C sales e-reporting is required for the notary.

3.3.3.7 VEFA (Sale of a Property Under Construction).

A sale of a property under construction involves purchasing a property that is still being built by paying a portion of the price before delivery.

Payments made before delivery are treated as down payments. When the sale is between professionals, these payments must be invoiced. Since 2023, they are subject to VAT.

Consequently, the process follows that of down payments and the final invoice (cases 20 and 21):

- When down payments are made, down payment invoices must be issued and include VAT. If the seller and buyer are VAT-registered and listed in the PPF directory, these invoices must be electronic and followed by a payment status, as VAT is due upon receipt of the down payments.
- Upon delivery of the goods, a final invoice is issued. It must also be electronic. To avoid double-counting VAT, best practice is to invoice the full value of the delivered goods on one line, and on another line to include a down payment adjustment for each down payment (if there are multiple payments), referencing the corresponding down payment invoice. Thus, the total pre-tax amount of this final invoice corresponds to the balance, and the VAT amount also corresponds to the applicable VAT balance.
